Registration Review Update for PPDC – October 12-13, 2011

Current Status

EPA is continuing to meet all registration review targets consistent with overall program objectives. At the end of FY 2011, out of a universe of 739 registration review cases including over 1,154 pesticide active ingredients:

- 297 cases are past the docket opening stage,
- 253 cases are past the Final Work Plan stage, and
- 30 registration review final decisions have been completed.

FY 2011 Accomplishments

During FY 2011, the pace of registration review continued to accelerate.

Registration Review Progress FY 2007 – FY 2011

Fiscal Year	Dockets Opened	Final Work Plans Completed	Final Decisions Completed
FY 2007	25	13	--
FY 2008	46	34	3
FY 2009	70	61	9
FY 2010	75	70	10
FY 2011	81	75	8
TOTAL	297	253	30

- **New Dockets** – The three OPP Divisions opened 81 new registration review dockets during FY 2011, continuing to move at a pace that must be maintained for the next six years in order to finish the initial 15-year cycle on schedule in 2022.
- **Final Work Plans** – The OPP Divisions also completed 75 Final Work Plans in FY 2011. Registration review cases with completed Final Work Plans are moving through the Data Call-In process toward the acquisition of data needed to produce risk assessments consistent with current science, policies and regulatory requirements.
- **Final Decisions** – EPA completed 8 registration review final decisions during FY 2011.

Schedule for FY 2012 – FY 2015

EPA updated the registration review schedule twice during FY 2011 and plans to issue a newly updated schedule for the registration review program later this year. The schedule will provide the timeline for opening dockets for the next four years of the program, from FY 2012 to 2015, and will include information on dockets that opened in FY 2007 through FY 2011. The schedule reflects EPA's plan to open about 75 new dockets each year through 2017. This keeps the Agency on track to complete the first 15-year cycle of registration review by October 1, 2022, for all pesticides registered as of October 1, 2007. EPA plans to continue to update the registration review schedule at least annually.
