NOTICE OF AVAILABILITY PROPOSED TOTAL MAXIMUM DAILY LOADS FOR WATERS AND POLLUTANTS IN THE STATE OF FLORIDA

Section 303(d) of the Clean Water Act requires each state to compile a list of those waters within its boundaries for which technology-based effluent limitations are not stringent enough to protect any water quality standard applicable to such waters. Listed waters are prioritized with respect to designated-use classifications and the severity of pollution. In accordance with this prioritization, states are then required to develop Total Maximum Daily Loads (TMDLs) for those listed waters. The TMDL process establishes the allowable loadings of pollutants or other quantifiable parameters for a waterbody based on the relationship between pollution sources and in-stream water quality conditions, so that states can establish water quality based controls to reduce pollution from both point and non-point sources and restore and maintain the quality of their water resources (USEPA, 1991).

On September 30, 2007, the U.S. Environmental Protection Agency Region 4 published a public notice which announced the availability of the EPA's proposed TMDLs for waterbodies in the Springs Coast Basin in Florida and requested comments from the public on those proposed TMDLs. Since the 2007 public notice, these TMDLs have been revised. The revised, proposed TMDL report being made available today was developed by the Florida Department of Environmental Protection (FDEP). The EPA is proposing these TMDLs in order to meet consent decree requirements pursuant to the Consent Decree entered in the case of Florida Wildlife Federation, et al. v. Carol Browner, et al., Case No. 98-356-CIV-Stafford. The TMDLs as currently proposed reflect revisions that were deemed appropriate by the EPA and/or FDEP to address new information that has been received since September 30, 2007, including public comments received in response to the EPA's September 20, 2007, public notice. The EPA, hereby, withdraws the previously proposed TMDLs. Persons who believe that previously-submitted comments have not been adequately addressed by the EPA and/or FDEP are encouraged to resubmit those comments in writing. Prior to finalizing these TMDLs, the EPA will consider only those timely, written comments provided in response to this public notice.

The waterbody impairments on Florida's 303(d) list that are addressed by the proposed TMDLs are listed below.

River Basin	Waterbody Name	Waterbody Identification (WBID) Number	§303(d) List Pollutant(s)
Springs Coast	Stevenson Creek	1567	Dissolved Oxygen and Nutrients

Persons wishing to comment on the proposed TMDLs or to offer new data or information regarding the proposed TMDLs are invited to submit the same in writing or electronically (preferred method being electronic copies of Microsoft Word documents) within 30 days of this notice, to the U.S.

Environmental Protection Agency Region 4, Water Protection Division, 61 Forsyth Street, S.W., Atlanta, Georgia 30303-8960, ATTENTION: Ms. Sibyl Cole, Pollution Control and Implementation
