Subject: Capitol Power Plant Emissions

Body: Sep 26, 2012

Mike Gordon

Dear Gordon,

Air Pollution from the Capitol Power Plant has for decades put the health of the District of Columbia's residents at risk. The plant's emissions had been reduced over the last several years as the facility stopped burning coal. Now, however, the plant is proposing that it's pollution limits be increased back to the levels they were before as part of an effort to upgrade the plant and improve energy efficiency.

You have the opportunity to ensure that the reductions in air pollution from the plant be made permanent. I ask you to reject the Capitol Power Plant's application to increase it's emissions, in the name of energy efficiency, to levels where they were previously. To do otherwise would be a travesty.

Sincerely,

David Layland
62 Bryant St NW

Subject: Don't go back to the old ways

Body: Sep 26, 2012

Mike Gordon

Dear Gordon,

Having a power plant in the middle of a city is not a great idea, and if one exists, one should be kept as clean as is possible. Converting the capitol power plant to gas was a great idea, but whatever it has as output today should be kept as the baseline. Don't increase the toxic emissions from a power plant that is directly next door to hundreds of residents.

Sincerely,

Robert Pohl

Subject: Keep the Capitol Power Plant's Emissions Low and Help Children with Asthma!

Body: Sep 26, 2012

Mike Gordon

Dear Gordon,

My son, Jacob, has asthma, and we live on Capitol Hill. His asthma symptoms are correlated with the air pollution levels. He goes to Brent Elementary School, near the Capitol Power Plant. Please give Jacob a chance to grow and develop his lungs normally by not approving pollution limits on the power plant based on the higher levels from three years ago.

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,
Katherine David-Fox

Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

We beg you not to raise the emission level standards. Throwing away the progress made over the last few years would be a terrible shame and set a poor example for the rest of the nation. I personally have lung respiratory problems associated with having grown up in an urban environment. Keep the standard high! Make our future a green one!

Sincerely,

However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

I am writing to urge that the EPA uphold the strictest possible standards for clean air in D.C. and elsewhere. Like so many other residents, I personally know that the health toll that breathing unclear air can take, including asthma ,allergies, and other health issues. The rates of asthma in cities is skyrocketing, and the allergy levels keep rising, too.

One of the most alarming recent studies showed that even young people with healthy hearts can suffer temporary heart damage when breathing polluted air for 6-8 hours. It isn't just elderly people that can suffer heart attacks, strokes, high blood pressure, and other serious risks due to air pollution. It turns out even the healthiest members of the population will suffer when constantly breathing in air pollution.

Please uphold the standards from three years ago that will help to protect more people from breathing contaminated air. Asthma, heart attacks, strokes, and other serious health issues linked to air pollution are no joke and cost D.C. a lot of money in health care costs.

(I should note that anything that can prevent global warming is urgently needed, too.)

Mike Gordon

Dear Gordon,

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Jennifer Brandt

Dear Gordon,

I am a Capitol Hill resident, and we have solar panels. Our church, St, Mark's Capitol Hill, is in the process of installing solar panels and sustainable features as a part of our upcoming renovation.

I think it's time for the US Congress to take the lead in sustainable energy and green the US Capitol. With all their land they could easily have solar and thermal. They do not need this carbon age, smoke belching dragon of a power plant. It's a national disgrace. They should vote themselves an immediate upgrade and replace it tomorrow.

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Mary Feeherry

Dear Gordon,

As the mother of a 3-year-old in the District, I am concerned about air quality. I was encouraged by efforts to curb pollution from the Capitol Power Plant. Now I am concerned that a decision the EPA is about to make could set us back.

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Three years, as the Plant stopped burning coal, we took a huge step in the right direction. Let's not take a giant step backwards.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Mike Gordon

Dear Gordon,

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Monica Vinet

Dear Gordon,

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Ruth Mitchell

Mike Gordon

Dear Gordon,

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Mike Rowan

Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Leslie Feuille

Dear Gordon,

Also, as a complimentary energy source, I ask the Capitol Architect to look at the Washington Post Magazine article featuring Seth Grae's technology that engages nuclear waste to create energy without damaging the environment.

The coal industrialists should see the handwriting on the wall and re-tool to eliminate adding toxins to the immune systems of our population. The heavy metals stunt the growth of neurons so people have no chance of working smarter not harder! See www.iaomt.org for the research.

As well, for decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. Mike Gordon

Dear Gordon,

For decades pollution from the Capitol Power Plant has put residents of the District of Columbia at risk. Now you have the opportunity to ensure that the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, will continue for the future.

Families in D.C. deserve clean air and healthy communities. Moving to more efficient use of the energy sources being used to power our Nation's Capitol is the right direction. However the higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of air pollution from more than three years ago, should be rejected.

Sincerely,

Louis A Cipro

Dear Gordon,

At the very least, DC residents and citizens deserve clean air!

Please do your part to ensure the regulations protect the quality of air we all breathe and our livelihoods to be able to continue to walk, run, hike through our beautiful city. Our seniors citizens and breathing impaired residents deserve the best solutions technology can offer. As a result, we have healthier residents, citizens - requiring less costly health care.

Please do your part - do not let the Capitol Power Plant raise the pollution levels.

Thanks you.

Sincerely,

Keri Douglas

Dear Gordon,

For decades, pollution from the Capitol Power Plant has put residents of Capitol Hill and the wider District at risk. You now have the opportunity to make the life-saving reductions in pollution that have happened over the last three years, as the Plant stopped burning coal, continue into the future.

Washingtonians deserve healthy air - moving to clean, efficient, renewable power is one way to insure that we get it. The higher pollution limits the Capitol Power Plant is proposing, taking us back to harmful levels of toxins, should be loudly, decisively, and permanently rejected.

Sincerely,

Ryan Shepard
