Re: Vapor Intrusion Interim Measures Quarterly Report No. 9  
Chamberlain Manufacturing Corporation  
Former Facility at 550 Esther Street  
Waterloo, Iowa  
EPA Docket Nos. RCRA-07-2010-002 and CERCLA-07-2010-0005

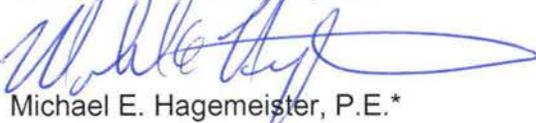

Dear Mr. Morrison:

Terracon Consultants, Inc. (Terracon) is pleased to submit this Vapor Intrusion Interim Measures (VIIM) Quarterly Report for activities conducted between July 1, 2013 and September 30, 2013 in conjunction with the site referenced above. The VIIM Quarterly Report presents a summary of activities related to the installation, operation, and monitoring of vapor mitigation systems in residential structures as requested by the USEPA. This report also presents analytical results from a routine indoor air quality sampling event as well as sub-slab vapor results from two homes per a request from Mr. Morrison.

Should you have any questions or require additional information, please do not hesitate to contact our office.

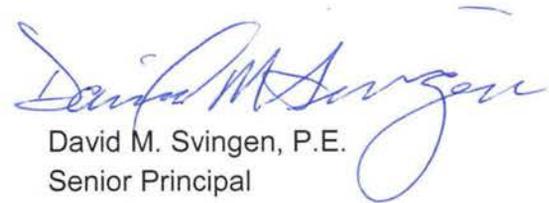

Sincerely,

**Terracon Consultants, Inc.**

**VAPOR INTRUSION INTERIM MEASURES  
QUARTERLY REPORT NO. 9  
CHAMBERLAIN MANUFACTURING CORPORATION  
FORMER FACILITY AT  
550 ESTHER STREET  
WATERLOO, IOWA**

Terracon Project No. 07107020  
October 31, 2013

## **1.0 INTRODUCTION**

Terracon has developed this VIIM Quarterly Report to identify interim remedial measures completed in residential structures in which vapor concentrations related to shallow groundwater contamination from the former Chamberlain Manufacturing Facility (Facility) exceed indoor air screening levels for the period of July 1, 2013, through September 30, 2013. This VIIM Quarterly Report is submitted in accordance with the requirements of the UAO, Docket Nos. RCRA 07-2010-002 and CERCLA 07-2010-005 dated April 20, 2010, and Task IA of the SOW attached to the UAO. Capitalized terms not defined herein have the definitions set for the in the UAO or the SOW.

This VIIM Quarterly Report also provides a summary of indoor analytical results that have been obtained from the residences sampled during the period from July 1, 2013 through September 30, 2013. The residences sampled this period have not required the installation of vapor mitigation based on concentrations observed at these properties or the resident (Residence No. 73) preference to continue monitoring.

### **1.1 Site Conditions**

The Facility is an irregularly shaped parcel containing approximately 22.8 acres and located at 550 Esther Street in Waterloo, Iowa. A Topographic Vicinity Map is included as Exhibit 1, Appendix A. A Site Diagram is included as Exhibit 2, Appendix A.

The Facility manufactured metal washer wringers and projectile metal parts from approximately 1919 until 1996 when it was sold to Atlas Warehouse L.C. for use as a storage facility. The Facility was subsequently abandoned and is currently vacant. The City of Waterloo (City) acquired the Facility from Atlas Warehouse L.C in 2005 in an effort to facilitate redevelopment and has demolished a significant portion of the Facility.

The Facility is zoned Heavy Industrial (M-2) by the City. The Facility is adjoined by park land to the north and south, single family residential housing to the west, and Virden Creek followed by a golf course to the east. Virden Creek is within approximately 100 feet of the Facility at its closest point. Gates Park adjoins the Facility to the north across Louise Street, to the east across Virden Creek, and to the south across the railroad tracks. Single family residences are located across East 4th Street to the west of the Facility. Single family residences are also located along the east side of East 4th between Anita and Louise Streets.

## 1.2 Previous Assessment Activities

Beginning in 2004, the City conducted an environmental assessment of the site using a USEPA Brownfields Grant. Results of assessment activities identified impacts to soil and groundwater at the site including a chlorinated solvent plume that extends offsite to the south and west. Site assessment activities were not completed due to funding restrictions of the Brownfields Grant program.

Subsequently, environmental assessment activities of onsite soil and groundwater conditions and the offsite chlorinated solvent plume were conducted by Chamberlain. The lateral extent of the chlorinated solvent plume extends south and west from the Facility into an area of residential development. The USEPA's preliminary evaluation identified the potential for vapor intrusion into residential structures based on the vapor intrusion to indoor air pathway resulting from the groundwater contaminant plume.

To further evaluate the vapor intrusion pathway, the USEPA conducted subslab vapor sampling of selected residences in November 2008. Due to problems with the sampling and analysis equipment, the sampling activities were repeated in April and May 2009. Subslab vapor samples were collected from ten homes located along and near East 4<sup>th</sup> Street and analyzed for VOCs. In addition, one indoor air sample was collected from one of the ten homes. The results of sampling activities identified PCE and TCE in excess of subslab vapor screening levels. The elevated concentrations were generally located within the 2200, 2300, and 2400 block of East 4<sup>th</sup> Street.

In accordance with the approved VIC Work Plan, Terracon initially conducted vapor intrusion characterization at 22 residences that responded with completed Sampling Request Forms and Access Agreements from both the property owner and current renter. Initial subslab, indoor air, and ambient air sampling was conducted between April 25, 2011 and May 3, 2011. Additional indoor air samples were collected from four residences on June 16, 2011, and from one residence on September 14, 2011. Based on the analytical results, the reported concentrations of indoor air samples in seven residences were greater than the applicable indoor air screening levels. Subslab and indoor air sample results were presented in the VIC Report dated July 5, 2011.

In accordance with the approved VIC Report, Terracon offered vapor sampling to 14 additional residences located on the west side of the 300 block of Boston Avenue and the east side of the 400 block of Boston Avenue. Terracon also reoffered vapor sampling to those residences that did not respond to previous submittals and contacted residences that requested sampling through the USEPA or that had previously authorized sampling, but could not be reached to schedule an appointment. Supplemental subslab, indoor air, and ambient air sampling was conducted at nine residences between December 12, and December 14, 2011. Analytical results for subslab samples collected from two residences exceeded subslab screening levels and as such, additional indoor air samples were collected at these locations on March 23, 2012. Analytical results for supplemental sampling activities were submitted to the USEPA on April 19, 2012. During the second quarter 2012, indoor air samples were collected at Residences 48 and 73 and were reported in Terracon's July 19, 2012, VIIM Quarterly Report No. 4.

Terracon has been conducting routine indoor air sampling of select homes consistent with the requirements of the UAO and July 5, 2011 VIC Report. In addition to indoor air sampling, Chamberlain has periodically checked required vapor mitigation systems for proper operation. Results of this work has been summarized in Terracon's Quarterly VIIM reports. This report covers the period of July 1, 2013 to September 30, 2013.

### **1.3 Project Objectives**

The objective of this VIIM Quarterly Report is to present the information required by Section 4.0 of the approved VIIM Work Plan dated October 14, 2010, revised on August 1, 2011, and amended July 19, 2011. This information includes system design "as-builts," information on the expected operational life of the system, a recommendation for the frequency for monitoring and maintaining the system, criteria for determining its effectiveness, a schedule for system replacement in whole or in part (as appropriate), the frequency of system inspection by the Respondent, the results of post-installation system monitoring and any approved deviations from the approved VIIM Work Plan.

## **2.0 SCOPE OF SERVICES**

The scope of services for the Third Quarter 2013 period included the following services:

- Collecting sub-slab vapor samples from residence No. 57 and 61. This sampling was conducted in response to resident requests to Mr. Bruce Morrison of the USEPA.
- Conducting an indoor air monitoring event at residences No. 20, 33, 38, 40, 47, 60, 73, and 76. Residence No. 48 was also scheduled to have an indoor air sample collected

but the resident requested that sampling not be conducted during the September 2013 monitoring event.

- Conducting routine vapor mitigation system checks at residences that are subject to continued system operation requirements. These include residences No. 22, 28, 45, and 46.

## **2.1 Site Access**

### **2.1.1 Sub-Slab Sampling Activities**

Based upon requests from residences No. 57 and 61 to Mr. Bruce Morrison for sampling of their homes, Chamberlain initiated securing site access to conduct sub-slab sampling. On behalf of Chamberlain, Terracon sent letters (dated September 6, 2013) to the residents explaining sampling activities that would be occurring along with an access agreement to allow for reasonable entry to the property for sampling. Terracon also made in-home visits to check for a location to install the sub-slab sampling implant and to assist the resident with completing an indoor air quality survey (for potential chlorinated VOC artifacts to the home). Access agreements and the surveys were secured with both parties in September 2013 so that sub-slab vapor sampling could be conducted during the routine September 2013 indoor air quality monitoring event. Copies of the September 6, 2013 letter, executed access agreements and the survey for residence No. 57 and 61 are contained in Appendix D.

### **2.1.2 Indoor Air Quality Sampling Activities**

Residents were contacted at least 48 hours in advance of sampling to arrange a time and date for conducting the proposed activities. With the exception of residence No. 48, residents provided access to collect routine indoor air samples. Residence No. 48 did not allow access as they wanted to leave their windows open and requested that sampling be deferred until late fall or winter of 2013.

### **2.1.3 Routine Mitigation System Inspections**

Residents were contacted at least 48 hours in advance of planned mitigation system inspections to arrange a time and date for conducting the proposed activities.

## **2.2 Mitigation Determination**

During the 3<sup>rd</sup> quarter of 2013, indoor air samples were collected from eight residences. The results of residence No. 73 exceeded indoor air screening level for TCE. The remaining homes sampled had results that were below indoor air screening levels for each chemical of concern (residence No. 38 had a first floor TCE exceedence with a compliant basement result). The USEPA has previously offered a mitigation system to Residence No. 73 but the homeowner elected to have continued routine indoor air monitoring. Based on sampling activities this period

and the stated preference of residence No. 73, no residences are proposed to have mitigation systems installed.

### **3.0 PROCEDURES FOR SYSTEM DESIGN, INSTALLATION AND COMMISSIONING**

Vapor mitigation systems were not designed, installed, commissioned or decommissioned during the 3<sup>rd</sup> calendar quarter of 2013.

### **4.0 COMPLETED SYSTEM INSTALLATIONS**

Interim mitigation systems were previously offered to, accepted by, and installed at eight residences. Interim mitigation systems were subsequently shut off at three residences. System installations were not conducted during the 3<sup>rd</sup> calendar quarter of 2013.

### **5.0 COMPLETED SYSTEM INSPECTION AND REPAIR**

In accordance with the approved VIIM Work Plan, system inspections are to occur on an annual basis following installation through the period of required operation. The purpose of the site inspection is to check each operating system for general condition using visual observation. The inspection includes checking for: proper operation of the blower, possible cracks or disconnections in visible piping, piping attachments, and checking manometer to confirm system vacuum. Routine system inspections at residence Nos. 4, 22, 28, 45, and 46 were scheduled for the 3<sup>rd</sup> quarter of 2013 period.

Residence No. 4 also has an active system but resident information has not been known so inspections have not been conducted. Recently, Terracon checked the County Assessor website to obtain ownership information which was provided in the last monthly email report to the USEPA. Terracon will wait USEPA's instructions on contacting the new homeowner.

A Terracon field professional conducted inspections at residence Nos. 22, 28, 45, and 46 on September 25 and 26, 2013. Based on observations, each system was noted to be in good repair for the above items and appeared to be operating as intended. A field inspection form was completed for each residence by the field professional during the inspection visit and signed by tenant. These forms are not included herein but are available upon request.

## **6.0 SUB-SLAB MONITORING RESULTS**

### **6.1 Sampling Activities**

Sub-slab sampling ports were installed on September 23, 2013 at residences No. 57 and 61 consistent with the protocol set-forth in the USEPA approved VIC Work Plan. A Sampling Port Installation Checklist was completed by Terracon and signed by the occupant following completion of sample port installation. The purpose of the Sampling Port Installation Checklist was to document proper completion of procedural activities, including identification of sample port location with the concurrence of the occupant, sample port installation in accordance with VIC Work Plan procedures, clean-up of work area, and observation of completed port installation by occupant. The Sampling Port Installation Checklist is not included within this report but is available upon request.

Terracon returned to the homes on September 26, 2013 to set 6-liter Summa canisters with flow controllers to collect approximate 30-minute sub-slab vapor samples. Terracon field personnel connected the flow controller to the Summa canister by removing the brass cap on the canister and tightening the stainless steel Swagelok fitting on the flow controller to the threads on the canister. A wrench was used to firmly tighten the fitting.

Once sample containers were positioned, pertinent information on the air sampling forms (i.e. project information, equipment identifiers, sample location, and start time) was entered and the forms were attached to the canisters. A Soil Vapor/Indoor Air Sampling Information Form indicating appropriate project and sample collection information was executed for each indoor air sample. A chain-of-custody indicating the collection date and times for each sample was also executed and maintained throughout the sampling event.

To open the canister, the valve was rotated counter-clockwise at least one full turn or otherwise opened. Approximately 30-minutes after opening the canisters, Terracon personnel returned to the residences, closed the valve on each canister and recorded the time and vacuum remaining in the Summa canister on the Terracon sampling forms and on the chain-of-custody. The canisters and flow controllers were then transported to the laboratory.

As part of the sampling program a blind duplicate sub-slab sample was collected at residence No. 61 for above analysis. The blind duplicate was collected by installing a tee in line to allow vapors to be collected from the sampling port at the same time.

## 6.2 Sub-slab Analytical Results

The Summa canisters were submitted for analysis of PCE, TCE, vinyl chloride, trans-1,2-dichloroethene (trans-DCE), cis-1,2-dichloroethene (cis-DCE), 1,1-dichloroethene, 1,1-dichloroethane, 1,1,1-trichloroethane (TCA), and 1,1,2-trichloroethane, using EPA Method TO-15. Laboratory procedures were conducted by TestAmerica of Knoxville, Tennessee. TestAmerica is NELAC accredited for the laboratory methods referenced above. The laboratory QAM is on file with the USEPA. A copy of the SOPs for the specified method was included as Appendix F of the VIC Work Plan. The TestAmerica data is reported in accordance with the QAM and SOP. Results of indoor air monitoring activities conducted over this current period are summarized in Table 1, Appendix B. Copies of analytical reports for samples collected over this period are provided in Appendix C.

The sub-slab analytical results as presented in Table 1 of Appendix B did not show exceedences of applicable sub-slab screening levels. The blind duplicate collected from residence No. 61 was comparable with the actual sample. The data has been reviewed and validated in accordance with the USEPA-approved QAPP and is considered valid for use. Based on the analytical results and consistent with the approved VIC Work Plan, Chamberlain does not propose further sampling of residences No. 57 and 61 at this time and proposes to remove the sub-slab sampling ports.

## 7.0 INDOOR MONITORING RESULTS

### 7.1 Sampling Activities

Indoor air sampling was conducted at No. 20, 33, 38, 40, 47, 60, 73, and 76 on September 24 or September 26, 2013. These residences do not have active mitigation systems. Periodic indoor air monitoring is required by the approved VIC Report where sub-slab concentrations exceed sub-slab screening levels, but indoor air concentrations are below indoor air screening levels.

Residence No. 73 indoor air concentrations exceeded applicable screening levels and the resident previously has been offered a mitigation system by the USEPA. The resident has elected to continue with routine indoor air monitoring.

Terracon was unable to collect indoor air samples at Home No. 48 during the September 2013 monitoring event based on the resident requesting that sampling not be conducted at that time. The resident did not want to close windows and asked that sampling be deferred until late fall or winter of 2013. Terracon plans to conduct this sampling during the fourth quarter of 2013, assuming the resident provides access.

Indoor air samples were collected using laboratory prepared 6-liter Summa canisters and flow controllers. The flow controllers were pre-set by the laboratory to collect samples over a 24-hour period. Terracon requested that occupants close doors and windows and operate the HVAC system for the period beginning 24-hours prior to the start of sample collection to the end of sample collection.

Consistent with VIC activities and in accordance with the EPA approval letter dated January 6, 2011, indoor air sampling was conducted in the basement and in the lowest occupied living area of each residence. A finished basement is considered to be an occupied living space. Terracon attempted to position sample containers in the same general location used for previous indoor air sampling.

Terracon field personnel connected the flow controller to the Summa canister by removing the brass cap on the canister and tightening the stainless steel Swagelok fitting on the flow controller to the threads on the canister. A wrench was used to firmly tighten the fitting.

Once sample containers were positioned, pertinent information on the air sampling forms (i.e. project information, equipment identifiers, sample location, and start time) was entered and the forms were attached to the canisters. A Soil Vapor/Indoor Air Sampling Information Form indicating appropriate project and sample collection information was executed for each indoor air sample. A chain-of-custody indicating the collection date and times for each sample was also executed and maintained throughout the sampling event.

To open the canister, the valve was rotated counter-clockwise at least one full turn or otherwise opened. Approximately 24-hours after opening the canisters, Terracon personnel returned to the Residences, closed the valve on each canister and recorded the time and vacuum remaining in the Summa canister on the Terracon sampling forms and on the chain-of-custody. The canisters and flow controllers were then transported to the laboratory.

Indoor air monitoring activities are summarized in Table 6-1.

Table 7-1 Semiannual Indoor Air Monitoring

| Residence No. | Sample Date | Basement Sample | 1 <sup>st</sup> Floor Sample |
|---------------|-------------|-----------------|------------------------------|
| 20            | 09/26/13    | X               | ---                          |
| 33            | 09/26/13    | X               | X                            |
| 38            | 09/26/13    | X               | X                            |
| 40            | 09/24/13    | X               | X                            |
| 47            | 09/24/13    | X               | X                            |
| 60            | 09/26/13    | X               | X                            |

| Residence No. | Sample Date | Basement Sample | 1 <sup>st</sup> Floor Sample |
|---------------|-------------|-----------------|------------------------------|
| 73            | 09/24/13    | X               | --- <sup>1</sup>             |
| 76            | 09/24/13    | X               | --- <sup>1</sup>             |

<sup>1</sup> – Basement contains a finished family room; therefore, the basement is the lowest occupied level. Per the USEPA letter of January 6, 2011, sampling is not required on the first floor.

## 7.2 Indoor Air Monitoring Results

Indoor air samples were collected using 6-liter Summa canisters. The Summa canisters were submitted for analysis of PCE, TCE, vinyl chloride, trans-1,2-dichloroethene (trans-DCE), cis-1,2-dichloroethene (cis-DCE), 1,1-dichloroethene, 1,1-dichloroethane, 1,1,1-trichloroethane (TCA), and 1,1,2-trichloroethane, using EPA Method TO-15. A blind duplicate collected from residence No. 73 was comparable with the actual sample and the equipment blank did not indicate positive detections of target chemicals of concern. The data has been reviewed and validated in accordance with the USEPA-approved QAPP and is considered valid for use.

Laboratory procedures were conducted by TestAmerica of Knoxville, Tennessee. TestAmerica is NELAC accredited for the laboratory methods referenced above. The laboratory QAM is on file with the USEPA. A copy of the SOPs for the specified method was included as Appendix F of the VIC Work Plan. The TestAmerica data is reported in accordance with the QAM and SOP. Results of indoor air monitoring activities conducted over this current period are summarized in Table 2, Appendix B. Copies of analytical reports for samples collected over this period are provided in Appendix C.

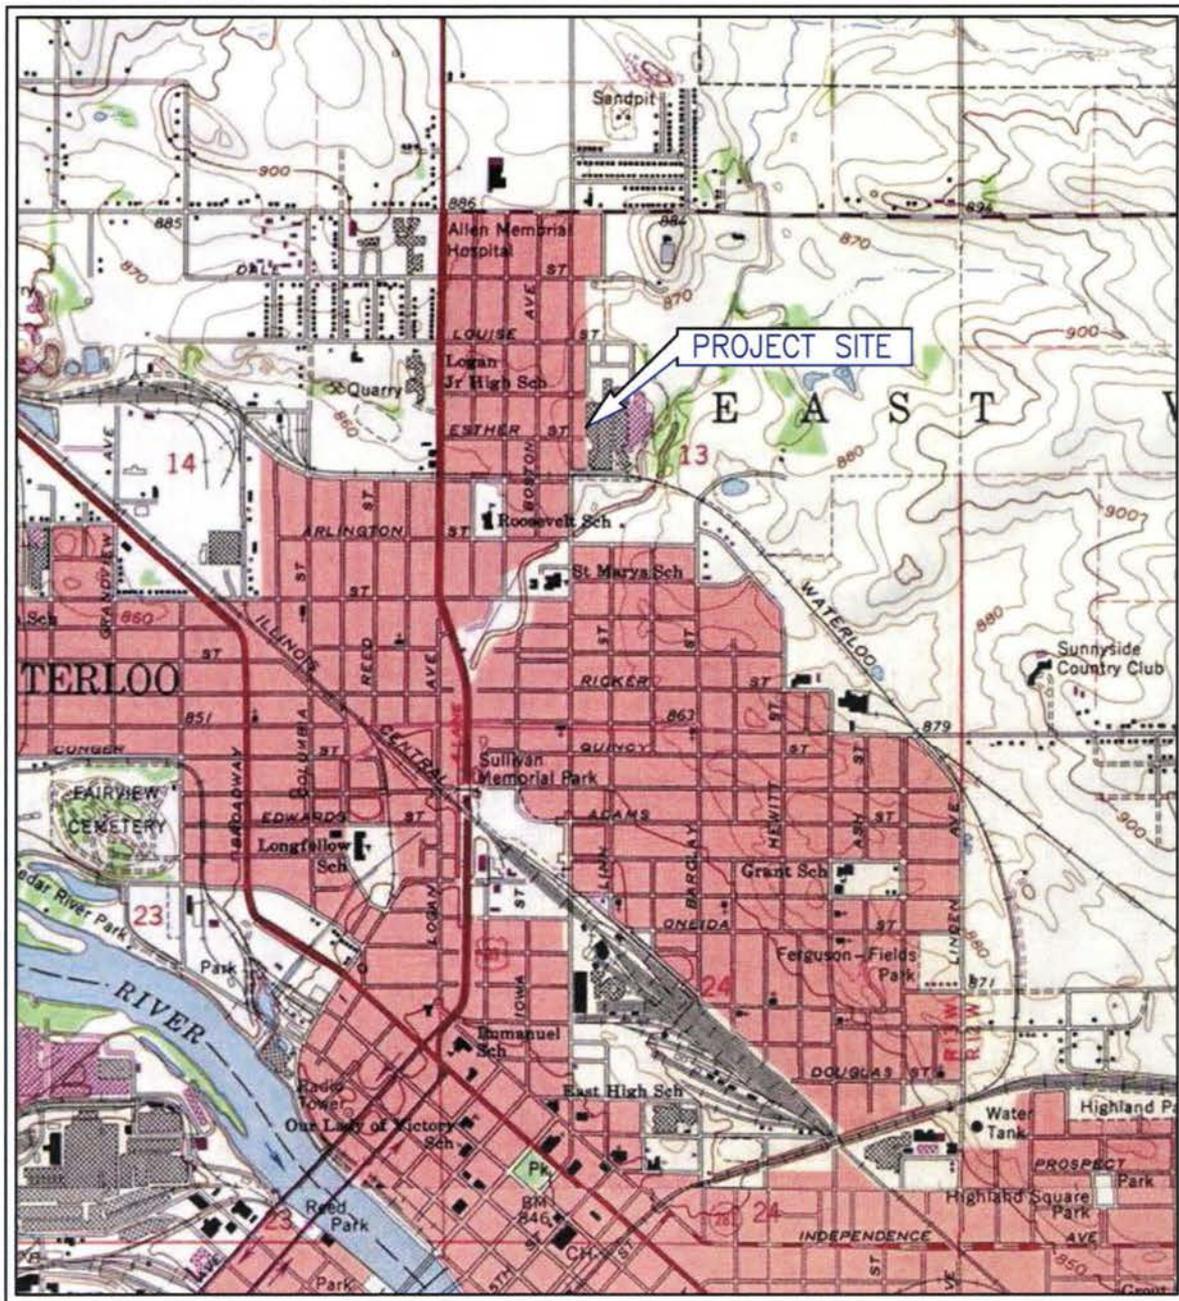

The analytical results for air samples collected at residence Nos. 20, 33, 40, 47, 60, and 76 had reported concentrations that were below applicable thresholds established in the VIC Work Plan and subsequent USEPA-approved modifications. As such, the installation of additional vapor mitigation systems is not required at these residences based on analytical results covered under this report.

The air sample collected from the basement of residence No. 38 was below applicable thresholds though the first floor sample had an exceedence of TCE. As such, the basement concentrations at residence No. 38 (where higher concentrations would be anticipated from a subsurface source) indicate compliance.

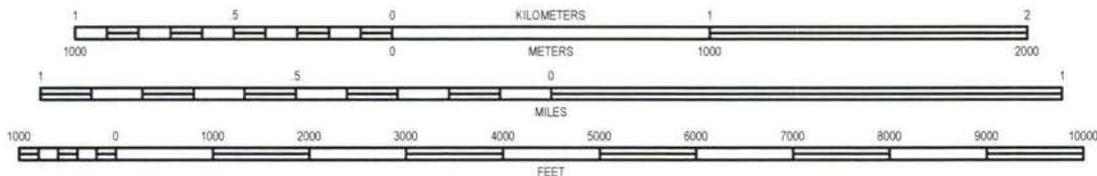

The air sample collected at residence No. 73 exceeded the applicable threshold for TCE. The resident has previously been offered a mitigation system but elected continued routine monitoring. In accordance with the resident's previous preference for continued monitoring, Terracon intends to continue with routine semi-annual indoor air monitoring at this time.

Since sub-slab samples at 20, 33, 38, 40, 47, 60, and 76 have exceeded sub-slab screening levels, routine monitoring will continue in accordance with the approved VIC Report. Per the approved VIC Report, the frequency of monitoring is to be reduced to an annual basis after two years of semi-annual monitoring. With this current event, two years of semi-annual monitoring have been conducted at these residences. As such, the next scheduled routine monitoring event will occur during the 3<sup>rd</sup> quarter of 2014.

**NOTES:** µg/m<sup>3</sup> - micrograms per cubic meter

ppm - parts per million

J - The contaminant is present at a concentration greater than the Analytical Method Detection Limit, but less than the Reporting Limit.

<sup>1</sup> - Indoor Air Screening Level is less than Reporting Limit. The USEPA has approved the use of the Reporting Limit as the screening level for this site due to the technical inability to accurately quantify the detection of these compounds at the current USEPA screening level.

<sup>2</sup> - Per USEPA approved VIC Work Plan

<sup>3</sup> - Revised Indoor Action Threshold for PCE per USEPA e-mail dated February 17, 2012 with an applied building attenuation factor of 10.

<sup>4</sup> - Revised per USEPA's letter dated October 27, 2011 and as an accommodation to USEPA without waiver of Chamberlain's concerns expressed in its email to USEPA dated November 14, 2011. A building attenuation factor of 10 was applied to the revised indoor air screening level.

**SAMPLE ID NOMENCLATURE:** First 2 letters identify sample type: SS - Sub-Slab, IA - Indoor Air, AA - Ambient Air, and EB - Equipment Blank  
 The numeric value following the sample type identify the Residence ID Number

- NOTES:** µg/m<sup>3</sup> - micrograms per cubic meter  
 ppm - parts per million  
 J - The contaminant is present at a concentration greater than the Analytical Method Detection Limit, but less than the Reporting Limit.  
<sup>1</sup> - Indoor Air Screening Level is less than Reporting Limit. The USEPA has approved the use of the Reporting Limit as the screening level for this site due to the technical inability to accurately quantify the detection of these compounds at the current USEPA screening level.  
<sup>2</sup> - Per USEPA approved VIC Work Plan  
<sup>3</sup> - Revised Action Threshold for PCE per USEPA e-mail dated February 17, 2012  
<sup>4</sup> - Revised per USEPA's letter dated October 27, 2011 and as an accommodation to USEPA without waiver of Chamberlain's concerns expressed in its email to USEPA dated November 14, 2011.

**SAMPLE ID NOMENCLATURE:** First 2 letters identify sample type: SS - Sub-Slab, IA - Indoor Air, AA - Ambient Air, and EB - Equipment Blank  
 The numeric value following the sample type identify the Residence ID Number

# ANALYTICAL METHODS SUMMARY

H3I250441

| PARAMETER                 | ANALYTICAL METHOD |
|---------------------------|-------------------|
| Volatile Organics by TO15 | EPA-2 TO-15       |

**References:**

EPA-2 "Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air", EPA-625/R-96/010b, January 1999.

## SAMPLE SUMMARY

H3I250441

| WO #  | SAMPLE# | CLIENT SAMPLE ID   | SAMPLED DATE | SAMP TIME |
|-------|---------|--------------------|--------------|-----------|
| M13L2 | 001     | IA-1-47-4          | 09/24/13     | 09:34     |
| M13L5 | 002     | IA-B-47-4          | 09/24/13     | 09:41     |
| M13L6 | 003     | IA-1-40-5          | 09/24/13     | 09:54     |
| M13L7 | 004     | IA-B-40-5          | 09/24/13     | 09:58     |
| M13L8 | 005     | IA-B-73-5          | 09/24/13     | 14:13     |
| M13L9 | 006     | IA-B-76-4          | 09/24/13     | 14:28     |
| M13MA | 007     | BLIND DUPLICATE #1 | 09/24/13     | 14:14     |
| M13MC | 008     | EQUIPMENT BLANK    | 09/24/13     |           |

**NOTE (S) :**

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

## PROJECT NARRATIVE

### H3I250441

The results reported herein are applicable to the samples submitted for analysis only. If you have any questions about this report, please call (865) 291-3000 to speak with the TestAmerica project manager listed on the cover page.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**The original chain of custody documentation is included with this report.**

#### Sample Receipt

There were no problems with the condition of the samples received.

#### Quality Control and Data Interpretation

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

## CERTIFICATION SUMMARY

Qualifiers

J      Estimated result. Result is less than RL.

The 'Result' in ug/m3 is calculated using the following equation: Amount Found(before rounding)\*(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m3 is calculated using the following equation: (Reporting Limit(before rounding) \* Dilution Factor) \* (Molecular Weight/24.45)

Qualifiers

J      Estimated result. Result is less than RL.

The 'Result' in ug/m3 is calculated using the following equation: Amount Found(before rounding)\*(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m3 is calculated using the following equation: (Reporting Limit(before rounding) \* Dilution Factor) \* (Molecular Weight/24.45)

Qualifiers

J      Estimated result. Result is less than RL.

The 'Result' in ug/m3 is calculated using the following equation: Amount Found(before rounding)\*(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m3 is calculated using the following equation: (Reporting Limit(before rounding) \* Dilution Factor) \* (Molecular Weight/24.45)

---

**Job Narrative**  
310-16607-1

**Comments**

No additional comments.

**Receipt**

The samples were received on 9/26/2013 6:52 PM; the samples arrived in good condition, properly preserved and, where required, on ice.

No analytical or quality issues were noted.

# Sample Summary

Client: Terracon Consulting Eng & Scientists  
Project/Site: Air - Chamberlain Mfg.

TestAmerica Job ID: 310-16607-1

## ANALYTICAL METHODS SUMMARY

H3J010401

| <u>PARAMETER</u>          | <u>ANALYTICAL<br/>METHOD</u> |
|---------------------------|------------------------------|
| Volatile Organics by TO15 | EPA-2 TO-15                  |

### References:

EPA-2 "Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air", EPA-625/R-96/010b, January 1999.

## SAMPLE SUMMARY

H3J010401

| WO #  | SAMPLE# | CLIENT SAMPLE ID   | SAMPLED DATE | SAMP TIME |
|-------|---------|--------------------|--------------|-----------|
| M143E | 001     | IA-B-33-5          | 09/26/13     | 10:29     |
| M143F | 002     | IA-1-33-5          | 09/26/13     | 10:24     |
| M143G | 003     | IA-1-38-5          | 09/26/13     | 10:45     |
| M143H | 004     | IA-B-38-5          | 09/26/13     | 10:37     |
| M143J | 005     | IA-1-60-4          | 09/26/13     | 11:05     |
| M143K | 006     | IA-B-60-4          | 09/26/13     | 11:10     |
| M143L | 007     | IA-B-20-7          | 09/26/13     | 16:23     |
| M143M | 008     | SS-57-1            | 09/26/13     | 16:04     |
| M143N | 009     | SS-61-1            | 09/26/13     | 17:43     |
| M143P | 010     | BLIND DUPLICATE #2 | 09/26/13     | 17:43     |

**NOTE (S) :**

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

## PROJECT NARRATIVE

### H3J010401

The results reported herein are applicable to the samples submitted for analysis only. If you have any questions about this report, please call (865) 291-3000 to speak with the TestAmerica project manager listed on the cover page.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**The original chain of custody documentation is included with this report.**

#### Sample Receipt

There were no problems with the condition of the samples received.

#### Quality Control and Data Interpretation

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

#### Can Certification Comments:

The EPA method requires that all target analytes in the continuing calibration verification standard be within 30% difference from the initial calibration. The daily standard and laboratory control sample recovery for 1,1,1-trichloroethane was above QC limits on MR 08/22/13. However, since all the recovery was high and this analyte was not detected above the reporting limit in the associated samples, the validity of the data is unaffected.

## CERTIFICATION SUMMARY

| Laboratory            | Authority           | Program       | EPA Region | Certification ID |

J      Estimated result. Result is less than RL.

The 'Result' in ug/m3 is calculated using the following equation: Amount Found(before rounding)<sup>2</sup>/(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m3 is calculated using the following equation: (Reporting Limit(before rounding) \* Dilution Factor) \* (Molecular Weight/24.45)

Qualifiers

J      Estimated result. Result is less than RL.

The 'Result' in ug/m3 is calculated using the following equation: Amount Found(before rounding)\*(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m3 is calculated using the following equation: (Reporting Limit(before rounding) \* Dilution Factor) \* (Molecular Weight/24.45)

| SURROGATE            | PERCENT<br>RECOVERY | LABORATORY<br>CONTROL<br>LIMITS (%) |
|----------------------|---------------------|-------------------------------------|
| 4-Bromofluorobenzene | 101                 | 60 - 140                            |

The 'Result' in ug/m3 is calculated using the following equation: Amount Found(before rounding)\*(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m3 is calculated using the following equation: (Reporting Limit(before rounding) \* Dilution Factor) \* (Molecular Weight/24.45)

## Appendix D

September 6, 2013

Ms. Rachelle Grandon  
2601 E. 4<sup>th</sup> St  
Waterloo, Iowa 50703

Dear Ms. Grandon:

As you know, the United States Environmental Protection Agency ("EPA") asked Chamberlain Manufacturing Corporation to do environmental testing of soil vapors beneath certain homes in your neighborhood near the 550 Esther Street property, currently owned by the City of Waterloo. We understand from Bruce Morrison of the EPA that you have requested that your home be sampled.

Terracon Consultants, Inc., a licensed and experienced environmental consulting and engineering company, will be in your neighborhood conducting sampling in September 2013. We would like to also conduct sampling of your home at that time to comply with your request to conduct sampling.

The sampling, which is completely voluntary, involves two initial visits of about an hour or less each by courteous and experienced professionals who will display proper identification and respect you and your home.

Here's how it works:

*Initial Visit: Sampling Port Installation and Questionnaire*

On the first visit, we will install a small sample "port" in your home. The port is installed after wet drilling a 1-inch opening in the concrete floor of your basement or the lowest level of your home such as a crawl-space or slab. After installing the port, the voids are then backfilled with sand and concrete, which will set for at least 48 hours. We will clean-up the work area.

We will also ask for your assistance as our field personnel complete a questionnaire about your home. The questionnaire seeks information regarding your home and the presence of chemicals containing volatile organic compounds, such as paints, glues, stored fuels and dry-cleaned clothes. According to EPA, these household products can contribute to indoor air quality problems.

*Additional Visit(s): Sample Collection*

About two days after the first visit, we will return for about 45 minutes to collect a sample from the port. These indoor Depending on the results of the sampling, one or more additional

Terracon Consultants, Inc. 15080 A Circle Omaha, Nebraska 68144

sampling events may be needed to confirm the results of the previous event. If necessary, we will contact you and make arrangements for any additional sampling events.

Once EPA agrees that sampling in the area is complete, we will remove the sampling port and seal the area where the port was installed at your request.

The results of this sampling will be reviewed by EPA. Following EPA review, a copy of the results will be provided for your records. If the sampling identifies any vapors beneath your home that warrant attention, we will contact you and offer you an EPA-approved system, usually located in your basement, that is designed to reduce any vapors. The system would be installed at no cost to you.

It is important to know that this sampling is a precautionary step. The information we obtain will help us gain a fuller understanding of the conditions in your neighborhood and whether any additional action is needed.

Please complete the enclosed request form and access agreement and mail it to:

## Sampling Request Form

(Please complete and return by September 17, 2013)

Name: Rachelle Grandon  
Address: 2601 E. 4th St  
Waterloo, IA 50703  
Telephone: (319) 231-4234 (Day)  
\_\_\_\_\_ (Evening)

Are you the owner of the property?  Yes  No

If no, please provide contact information for the property owner:

Name: \_\_\_\_\_  
Address: \_\_\_\_\_  
\_\_\_\_\_  
Telephone: \_\_\_\_\_

We hereby provide the City of Waterloo, Chamberlain Manufacturing Corporation, the United States Environmental Protection Agency and their authorized representatives permission to enter the residence listed above at a mutually convenient time for the purpose of collecting samples and completing the questionnaire as outlined in Terracon's letter dated September 6, 2013 and the enclosed access agreement.

Signature of Owner(s) or Lessee(s):

Rachelle Grandon

Dated: Sept. 23<sup>rd</sup>, 2013

## ACCESS AGREEMENT

Date: 9/6/13

### DEFINITIONS

The property to which access is granted is: 2601 E. 4<sup>th</sup> Street ("Property").

The Legal Owner(s) of the Property or person/entity with legal authority to grant access to the Property is: Rachelle Grandon ("Grantor(s)").

The services to be conducted on the Property are generally described as follows: Collection of samples as outlined in the Resident Sampling Request letter dated September 6, 2013. ("Services").

The entity granted access for the purposes of performing the Services is Terracon Consultants, Inc., which shall include its employees, agents, and subcontractors ("Grantee").

The Services are performed for the benefit of Chamberlain Manufacturing Corporation ("Client"), pursuant to the Agreement for Services between Terracon and Client, dated September 23, 2010.

### AGREEMENTS

By its signature below, Grantor represents it has authority to, and does, grant access to the Property to Grantee for the purpose of performing the Services. Grantor agrees that:

- Grantee may bring sampling equipment on the Property to recover and collect soil, water, and other samples, and perform other actions related to the exploration of surface or subsurface conditions on the Property, as necessary to perform the Services. Grantee may also photograph portions of the Property and ask Grantor to assist in completing a questionnaire regarding activities at the property.
- Grantee will make reasonable efforts to restore the property and leave it in a condition suitable for its previous use.
- Grantor will not interfere with any of the activities of Grantee or undertake any actions regarding the use of Property that would endanger the health, safety, or welfare of the Grantee employees, agents, or subcontractors, or damage their equipment, materials, or property.
- Grantor will indemnify and hold Grantee harmless with respect to activities of Grantee.

By its signature below, Grantee agrees:

- That upon completion of Services and activities authorized by this Access Agreement, Grantee will remove all material and equipment utilized by Grantee from the Property, with the exception of ground markers that may be placed on the premises to designate sampling areas,
- Grantee will remove boring spoils that accumulate around the bore holes.
- Grantee will make reasonable efforts to restore the property and leave it in a condition suitable for its previous use.

The Services and field activities authorized under this Access Agreement may begin after signature of Grantor. Access is granted until Services are completed.

September 6, 2013

Mr. Philip Maxey  
2617 E. 4<sup>th</sup> St  
Waterloo, Iowa 50703

Dear Mr. Maxey:

As you know, the United States Environmental Protection Agency ("EPA") asked Chamberlain Manufacturing Corporation to do environmental testing of soil vapors beneath certain homes in your neighborhood near the 550 Esther Street property, currently owned by the City of Waterloo. We understand from Bruce Morrison of the EPA that you have requested that your home be sampled.

Terracon Consultants, Inc., a licensed and experienced environmental consulting and engineering company, will be in your neighborhood conducting sampling in September 2013. We would like to also conduct sampling of your home at that time to comply with your request to conduct sampling.

The sampling, which is completely voluntary, involves two initial visits of about an hour or less each by courteous and experienced professionals who will display proper identification and respect you and your home.

Here's how it works:

*Initial Visit: Sampling Port Installation and Questionnaire*

On the first visit, we will install a small sample "port" in your home. The port is installed after wet drilling a 1-inch opening in the concrete floor of your basement or the lowest level of your home such as a crawl-space or slab. After installing the port, the voids are then backfilled with sand and concrete, which will set for at least 48 hours. We will clean-up the work area.

We will also ask for your assistance as our field personnel complete a questionnaire about your home. The questionnaire seeks information regarding your home and the presence of chemicals containing volatile organic compounds, such as paints, glues, stored fuels and dry-cleaned clothes. According to EPA, these household products can contribute to indoor air quality problems.

*Additional Visit(s): Sample Collection*

About two days after the first visit, we will return for about 45 minutes to collect a sample from the port. Depending on the results of the sampling, one or more additional

Terracon Consultants, Inc. 15080 A Circle Omaha, Nebraska 68144

P [402] 330 2202 F [319] 277 7606 terracon.com

sampling events may be needed to confirm the results of the previous event. If necessary, we will contact you and make arrangements for any additional sampling events.

Once EPA agrees that sampling in the area is complete, we will remove the sampling port and seal the area where the port was installed at your request.

The results of this sampling will be reviewed by EPA. Following EPA review, a copy of the results will be provided for your records. If the sampling identifies any vapors beneath your home that warrant attention, we will contact you and offer you an EPA-approved system, usually located in your basement, that is designed to reduce any vapors. The system would be installed at no cost to you.

It is important to know that this sampling is a precautionary step. The information we obtain will help us gain a fuller understanding of the conditions in your neighborhood and whether any additional action is needed.

Please complete the enclosed request form and access agreement and mail it to:

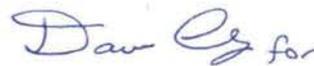

Terracon Consultants Inc.  
6612 Chancellor Dr. Suite 102  
Cedar Falls, Iowa 50613

In order to facilitate scheduling, we ask that you return the sampling request form no later than September 17, 2013. After we receive the form, we will call you to schedule a mutually convenient time for us to meet at your home to begin the sampling process.

We appreciate your cooperation in this process.

Sincerely,  
**Terracon Consultants, Inc.**

We hereby provide the City of Waterloo, Chamberlain Manufacturing Corporation, the United States Environmental Protection Agency and their authorized representatives permission to enter the residence listed above at a mutually convenient time for the purpose of collecting samples and completing the questionnaire as outlined in Terracon's letter dated September 6, 2013 and the enclosed access agreement.

Signature of Owner(s) or Lessee(s):

\_\_\_\_\_  

Dated: 9-10, 2013

## ACCESS AGREEMENT

Date: 9/6/13

### DEFINITIONS

The property to which access is granted is: 2617 E. 4<sup>th</sup> Street ("Property").

The Legal Owner(s) of the Property or person/entity with legal authority to grant access to the Property is: Philip Maxey ("Grantor(s)").

The services to be conducted on the Property are generally described as follows: Collection of samples as outlined in the Resident Sampling Request letter dated September 6, 2013. ("Services").

The entity granted access for the purposes of performing the Services is Terracon Consultants, Inc., which shall include its employees, agents, and subcontractors ("Grantee").

The Services are performed for the benefit of Chamberlain Manufacturing Corporation ("Client"), pursuant to the Agreement for Services between Terracon and Client, dated September 23, 2010.

### AGREEMENTS

By its signature below, Grantor represents it has authority to, and does, grant access to the Property to Grantee for the purpose of performing the Services. Grantor agrees that:

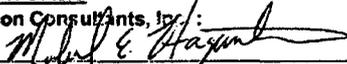

- Grantee may bring sampling equipment on the Property to recover and collect soil, water, and other samples, and perform other actions related to the exploration of surface or subsurface conditions on the Property, as necessary to perform the Services. Grantee may also photograph portions of the Property and ask Grantor to assist in completing a questionnaire regarding activities at the property.
- Grantee will make reasonable efforts to restore the property and leave it in a condition suitable for its previous use.
- Grantor will not interfere with any of the activities of Grantee or undertake any actions regarding the use of Property that would endanger the health, safety, or welfare of the Grantee employees, agents, or subcontractors, or damage their equipment, materials, or property.
- Grantor will indemnify and hold Grantee harmless with respect to activities of Grantee.

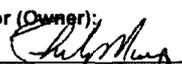

By its signature below, Grantee agrees:

- That upon completion of Services and activities authorized by this Access Agreement, Grantee will remove all material and equipment utilized by Grantee from the Property, with the exception of ground markers that may be placed on the premises to designate sampling areas,
- Grantee will remove boring spoils that accumulate around the bore holes.
- Grantee will make reasonable efforts to restore the property and leave it in a condition suitable for its previous use.

The Services and field activities authorized under this Access Agreement may begin after signature of Grantor. Access is granted until Services are completed.
