NOTES

1. Fuel Blending "design" capacity is based on one tank turnover per day. Realistically, treatment capacity is close to the rate at which we can pump into and out of the tank.
2. Neutralization "design" capacity is based on two tank turnovers per day.

**11. Map (See instructions on page 38)**

*Attach to this application a topographic map, or other equivalent map, of the area extending to at least one mile beyond property boundaries. The map must show the outline of the facility, the location of each of its existing and proposed intake and discharge structures, each of its hazardous waste treatment, storage, or disposal facilities, and each well where it injects fluids underground. Include all springs, rivers and other surface water bodies in this map area. See instructions for precise requirements.*

**12. Facility Drawing (See instructions on page 39)**

*All existing facilities must include a scale drawing of the facility (see instructions for more detail).*

**13. Photographs (See instructions on page 39)**

*All existing facilities must include photographs (aerial or ground-level) that clearly delineate all existing structures; existing storage, treatment and disposal areas; and sites of future storage, treatment or disposal areas (see instructions for more detail).*

**14. Comments (See instructions on page 39)**

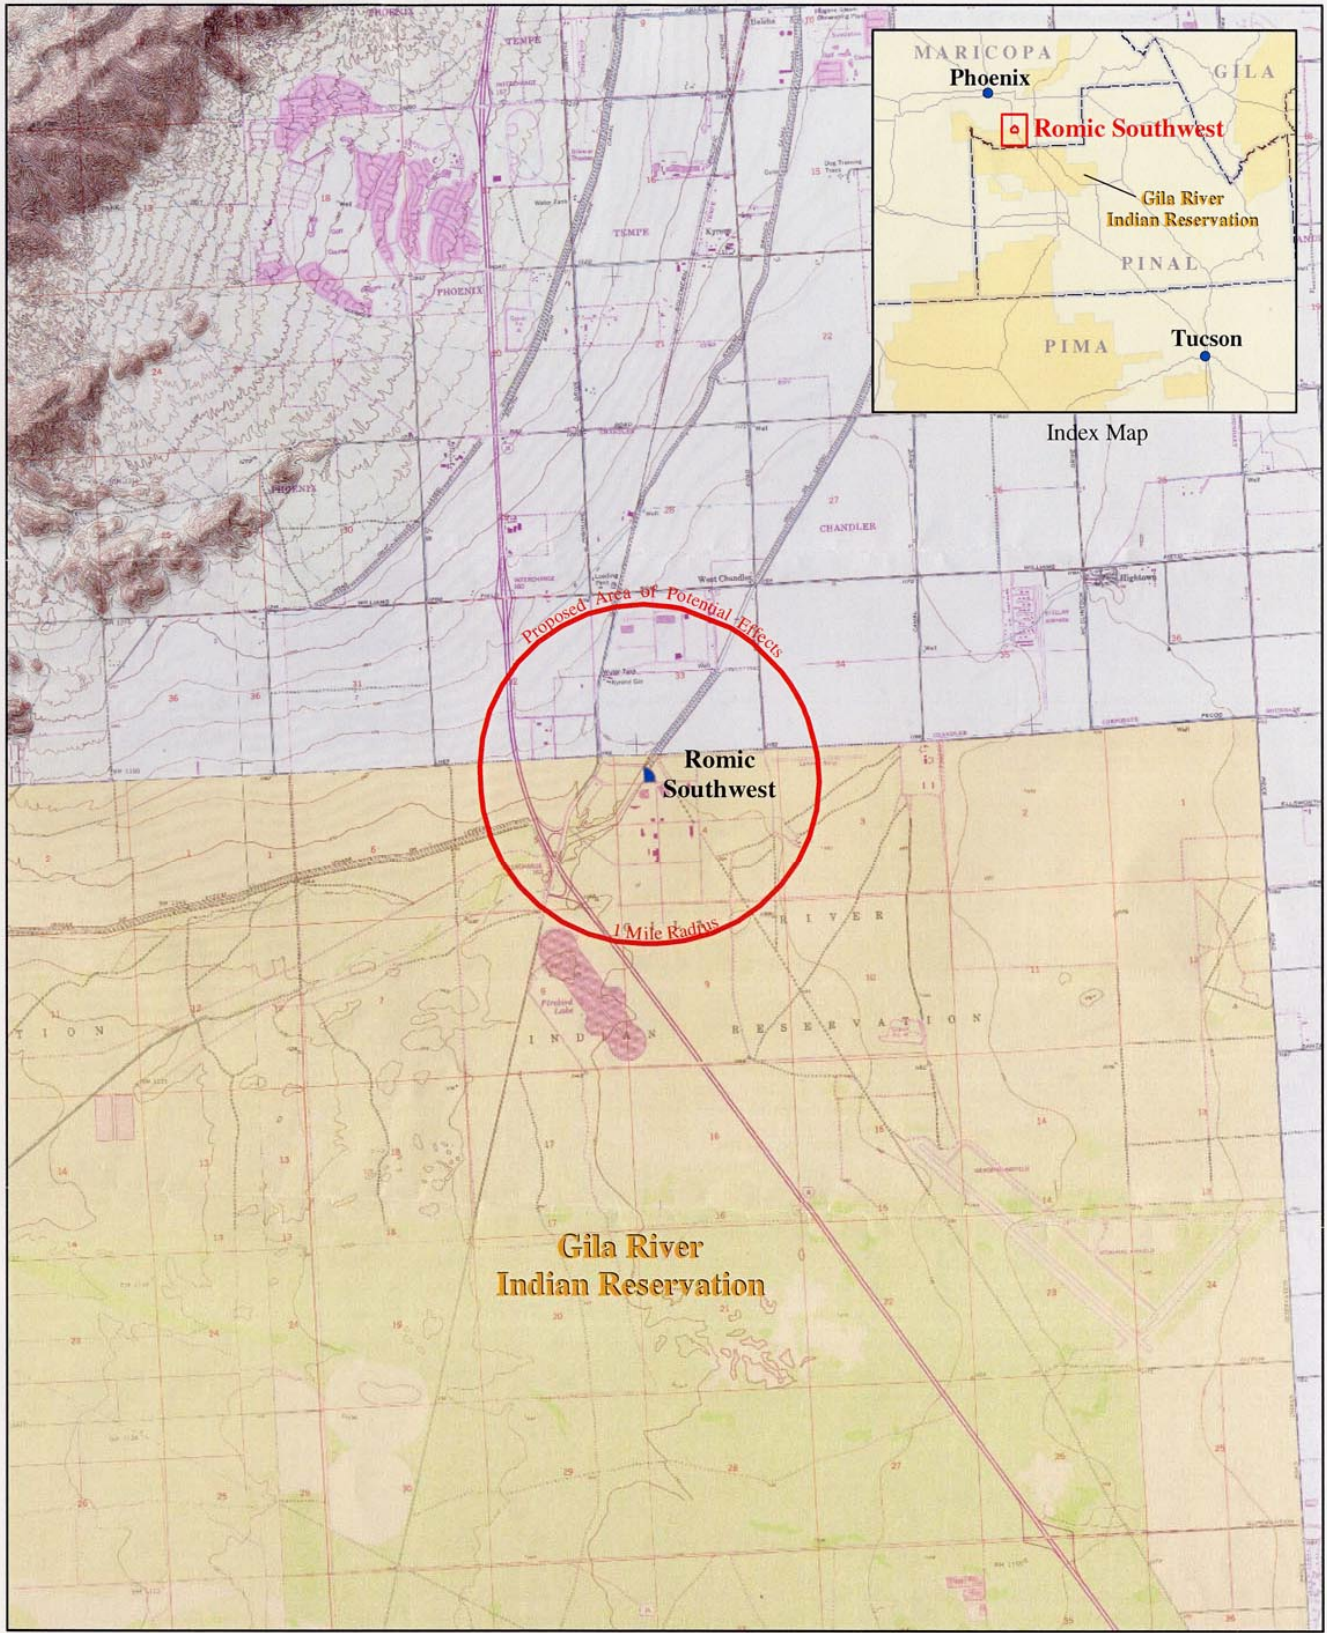

Combinations of the waste codes listed in item 10 were not noted as the number of permutations the facility could/does handle is large.

Blank lined area for additional comments.
