

US EPA ARCHIVE DOCUMENT

Accumulated Stormwater Discharge/Drainage Record/Log

All discharge of storm water accumulated in secondary containment areas must be:

1. Visually inspected carefully for presence of oil (sheen) or other contaminants *prior* to draining/pumping
2. Free of all debris, oil sheen or other oil spill residues, sediments, or other signs of pollutants

Drainage valves must be closed immediately after drainage activity is completed

Date	Initials	Secondary Containment Area (name or location)	Condition of Accumulated Stormwater	Drainage Start (valve open) Time	Drainage Stop (valve closed) Time	Drainage Valve Closed or Pump Turned Off When Completed?

**Accumulated Stormwater Discharge/Drainage Record/Log**

All discharge of storm water accumulated in secondary containment areas must be:

1. Visually inspected carefully for presence of oil (sheen) or other contaminants *prior* to draining/pumping
2. Free of all debris, oil sheen or other oil spill residues, sediments, or other signs of pollutants

Drainage valves must be closed immediately after drainage activity is completed

Date	Initials	Secondary Containment Area (name or location)	Condition of Accumulated Stormwater			Drainage Start (valve open) Time	Drainage Stop (valve closed) Time	Drainage Valve Closed or Pump Turned Off When Completed?
