

US EPA ARCHIVE DOCUMENT

**MINOR MODIFICATION NUMBER 2 TO PERMIT NO. CA10600002  
ISSUED TO IMPERIAL IRRIGATION DISTRICT**

In accordance with 40 CFR §144.41, this permit is hereby modified to establish a revised Maximum Allowable Injection Pressure based on results of a step-rate test conducted on July 1, 2014.

Portions of page 17 of the permit are revised to incorporate the above changes and now read as follows (for clarity, changes are shown with removals struck out and with new additions **emboldened and underlined**):

...

3. Injection Pressure Limitation
  - a. Maximum allowable injection pressure measured at the wellhead, to be applied to each permitted injection well, shall be based on the Step-Rate Test conducted under Section B paragraph 3.b of this part. EPA will provide the Permittee written notification of the maximum allowable injection pressure for each injection well constructed and operated under this permit, along with a minor modification of the permit under 40 CFR §144.41(e).
    - i. As determined by the step-rate test conducted under Section B paragraph 3.b of this part, injection pressure measured at any individual permitted wellhead shall not exceed ~~two hundred and ten (210) pounds per square inch gauge (psig)~~ **five hundred and fifty (550) pounds per square inch gauge (psig)**.

All other permit conditions remain unchanged, including all other items referenced in the first modification to this permit signed on August 21, 2012.

This minor modification is effective on [\[original signed 24 November 2014\]](#)
