US EPA ARCHIVE DOCUMENT

T.1 Introduction

This Attachment T has been prepared in support of an application (Application) by Florence Copper, Inc. (Florence Copper) to the United States Environmental Protection Agency (USEPA) for issuance of an Underground Injection Control Class III (Area) Permit (UIC Permit) for the planned Production Test Facility (PTF), to be located at the Florence Copper Project (FCP) in Pinal County, Arizona.

As per the instructions for Attachment T under USEPA Form 7520-6, this Attachment describes program and permit numbers of existing USEPA permits currently held by Florence Copper and to be transferred to Florence Copper as part of its proposed Florence Copper Project (FCP).

T.2 Existing EPA Permits

The only USEPA permit for Florence Copper's proposed FCP is UIC Permit No. AZ396000001 and the associated Aquifer Exemption granted by the USEPA in May 1997 under the Underground Injection Control Program. The proposed PTF described in this UIC Permit Application is located entirely within the area covered by UIC Permit No. AZ396000001, as well as the associated Aquifer Exemption, on Arizona State Mineral Lease No. 11-26500 (State Land Lease). The Aquifer Exemption is discussed in Attachment S of this Application.
