**Ecosystem-Scale Selenium Modeling in Support of Fish and Wildlife
Criteria Development for the San Francisco Bay-Delta Estuary, California
Administrative Report**

Figures 1 through 12

U.S. Department of the Interior
U.S. Geological Survey
December, 2010

Find the full report and other attachments at <http://www.epa.gov/region9/water/ctr>

Figure 1. Map of the San Francisco Bay-Delta Estuary.

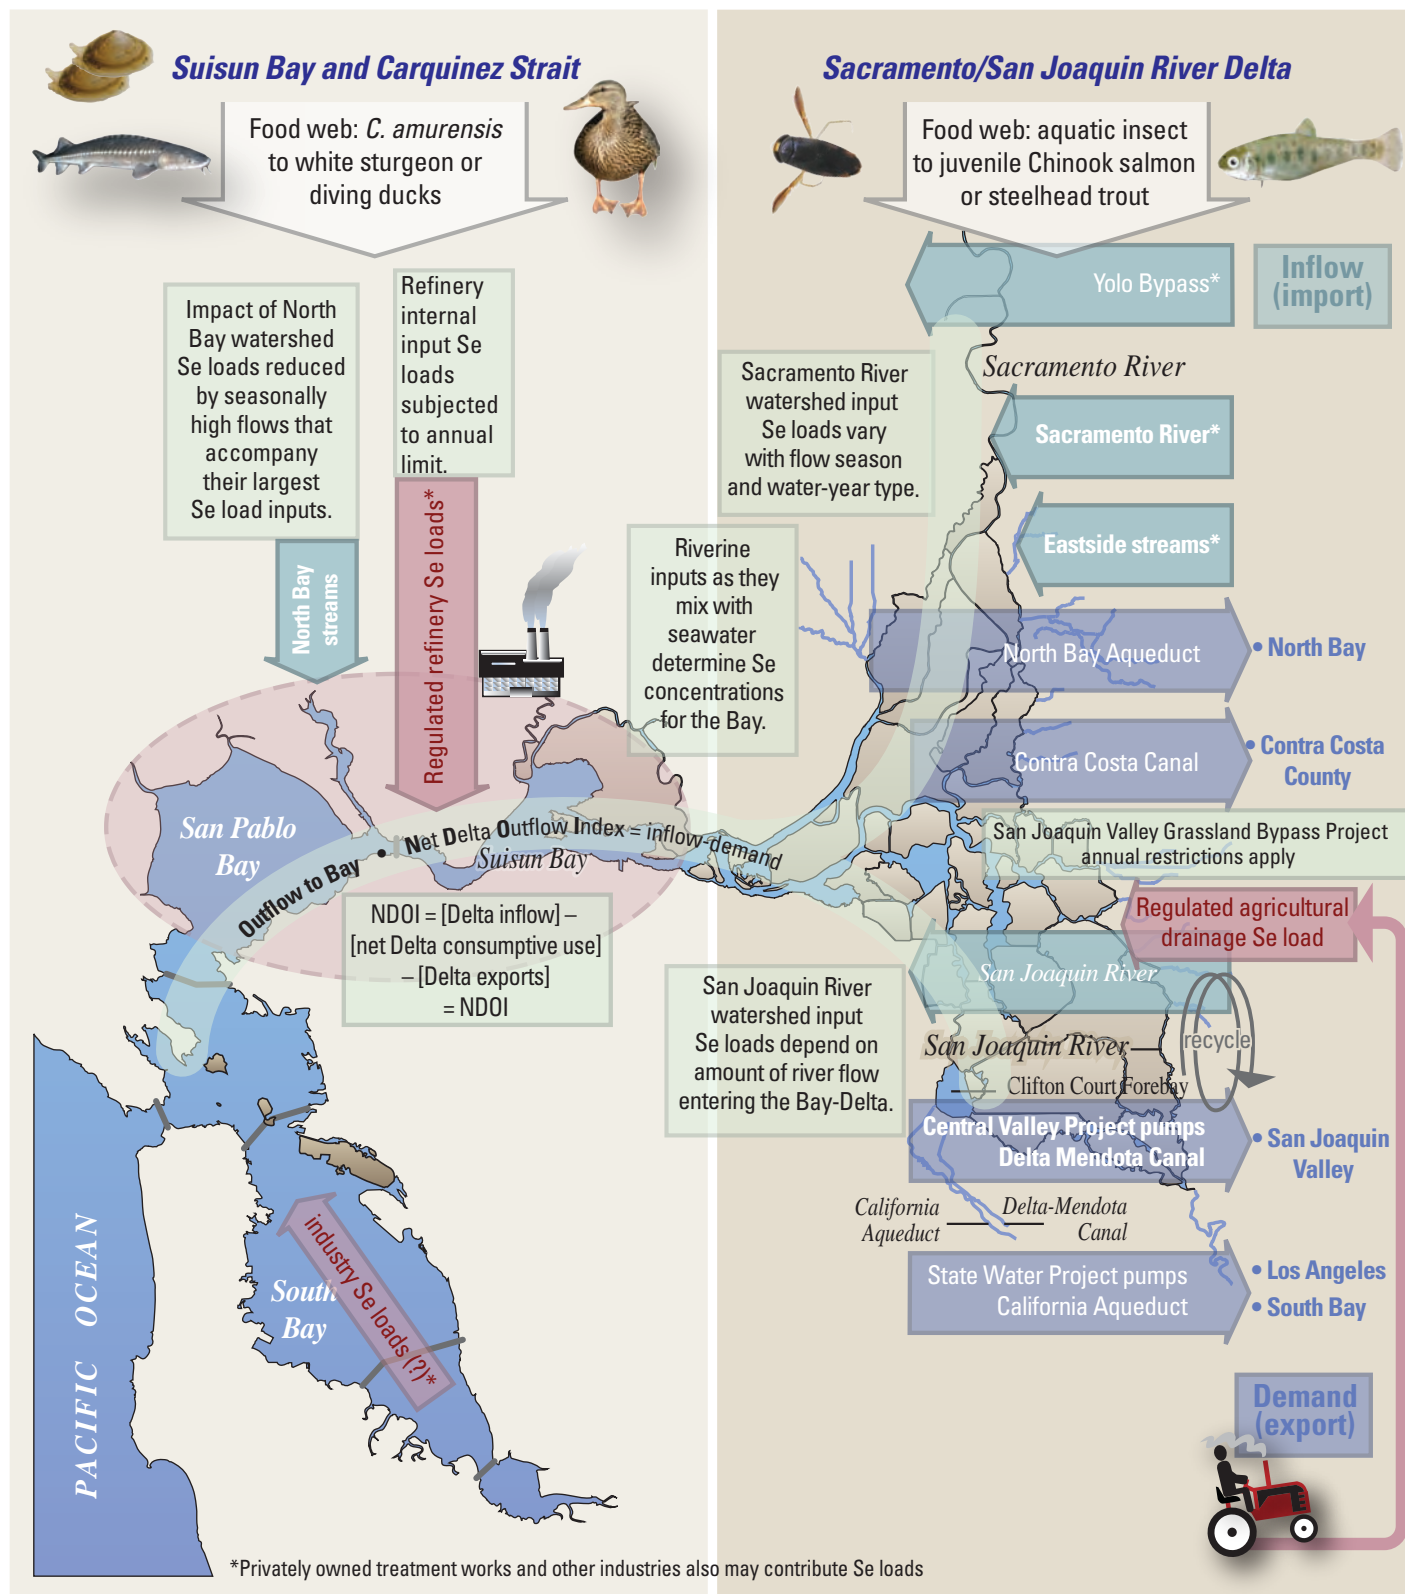

Figure 2. Conceptual details of sources of selenium, site-specific food webs, and hydrodynamic connections for the Bay-Delta.

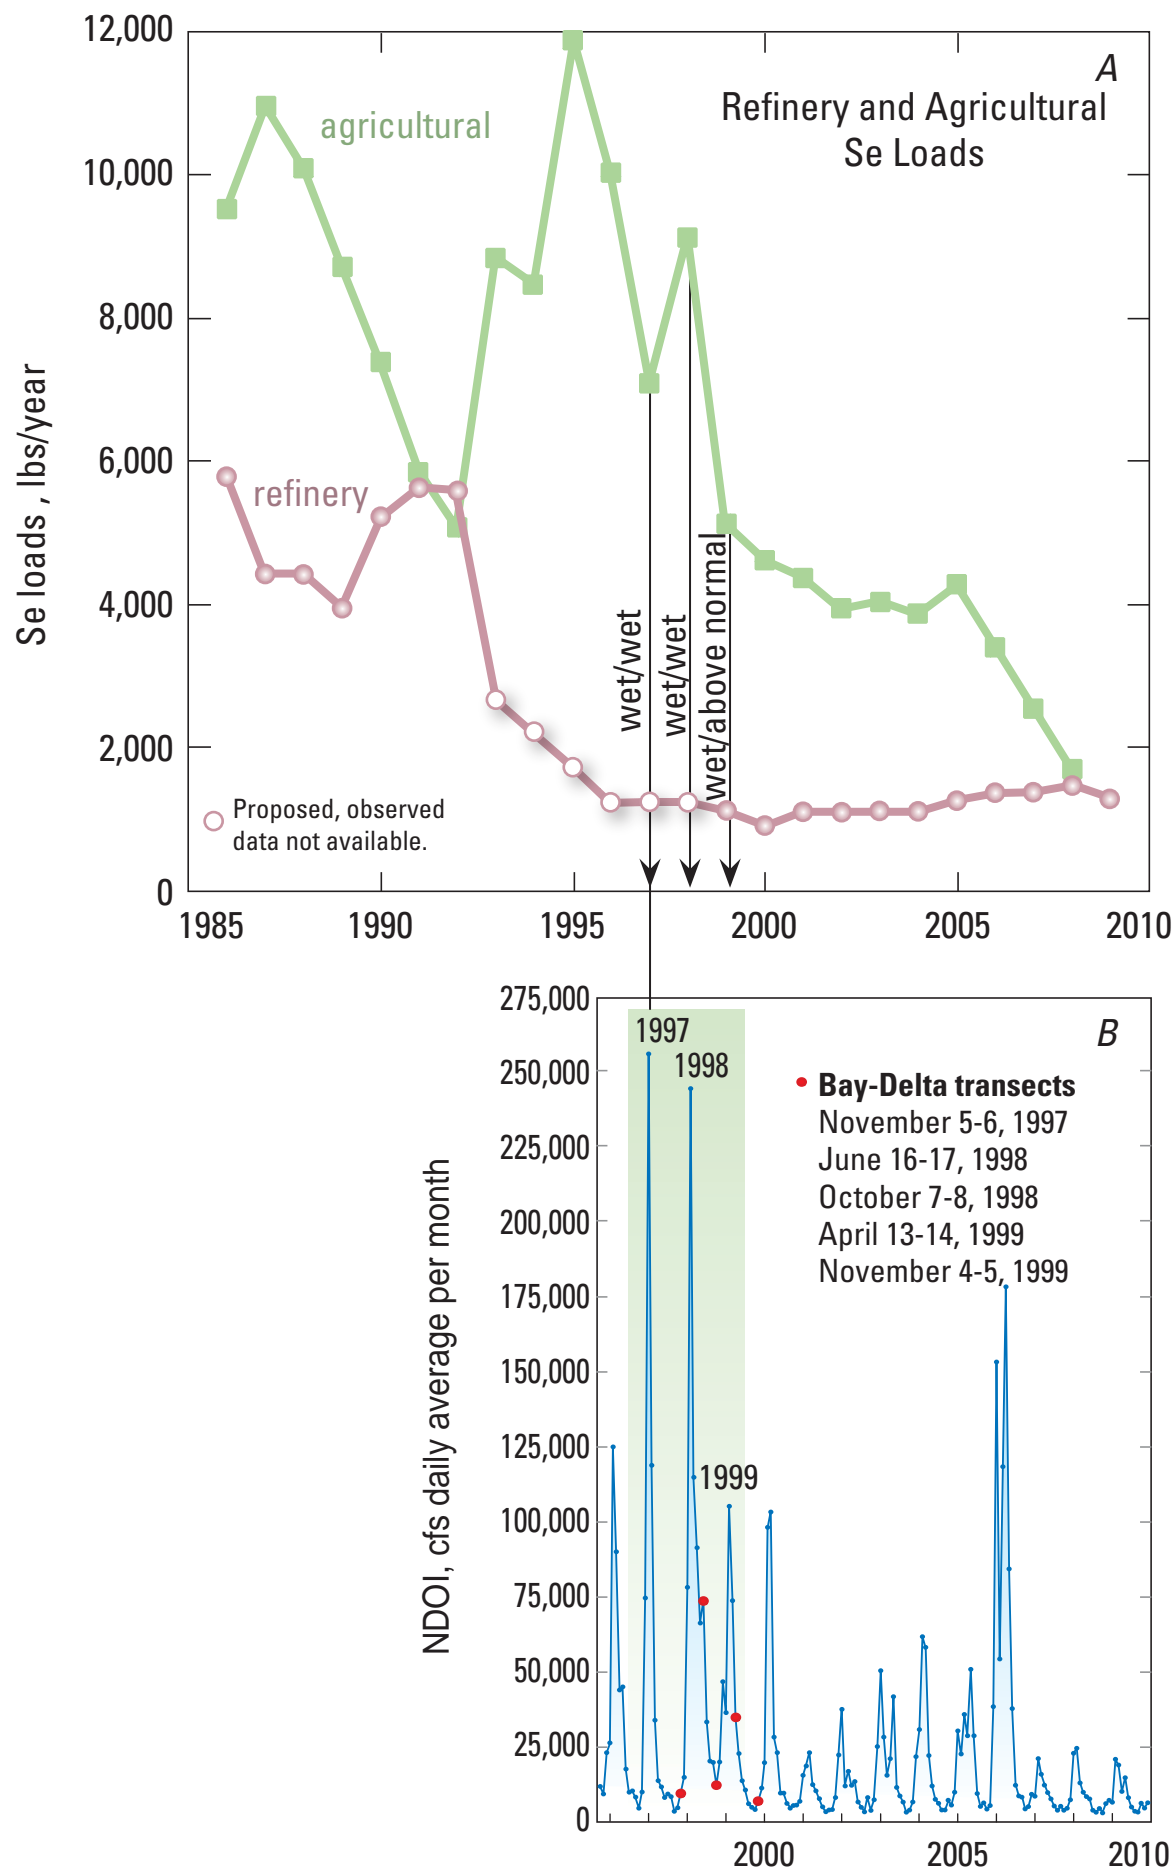

Figure 3. Refinery and agricultural selenium loads (1985-2009) (A) and flow conditions (1996-2009) (B).

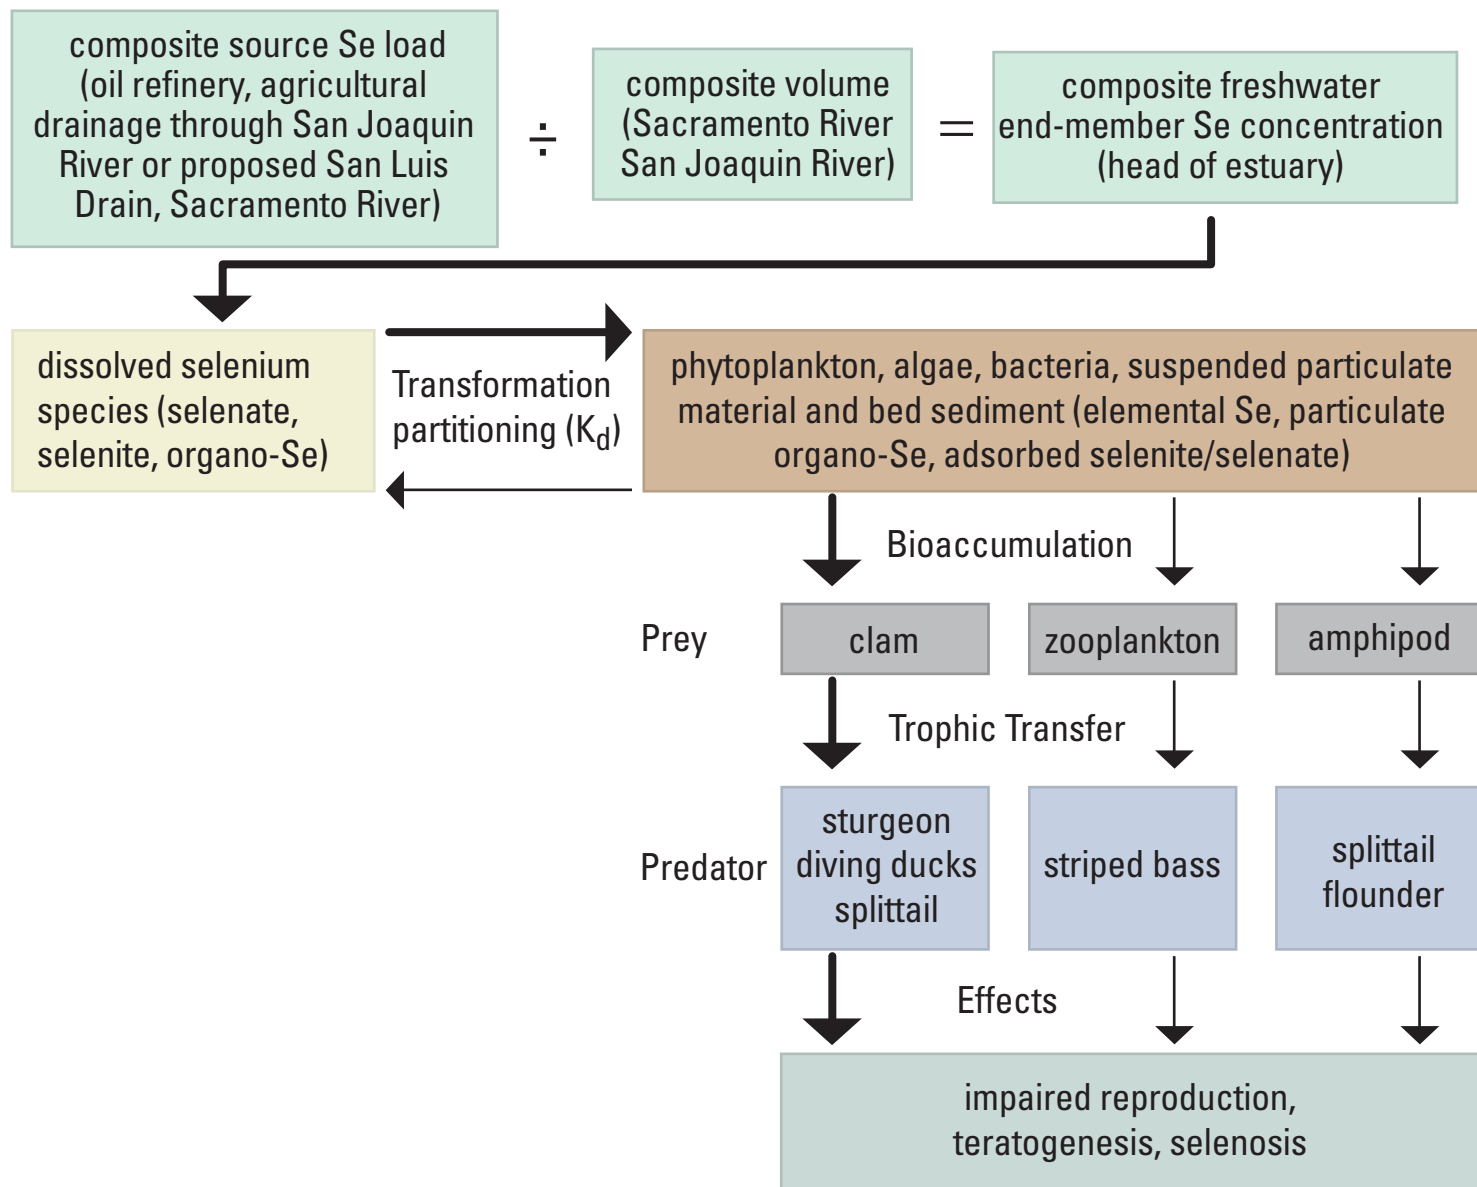

Figure 4. Grassland Bypass Project selenium loads (1997-2009) (A) and proposed selenium load targets (2009-2019) (B).

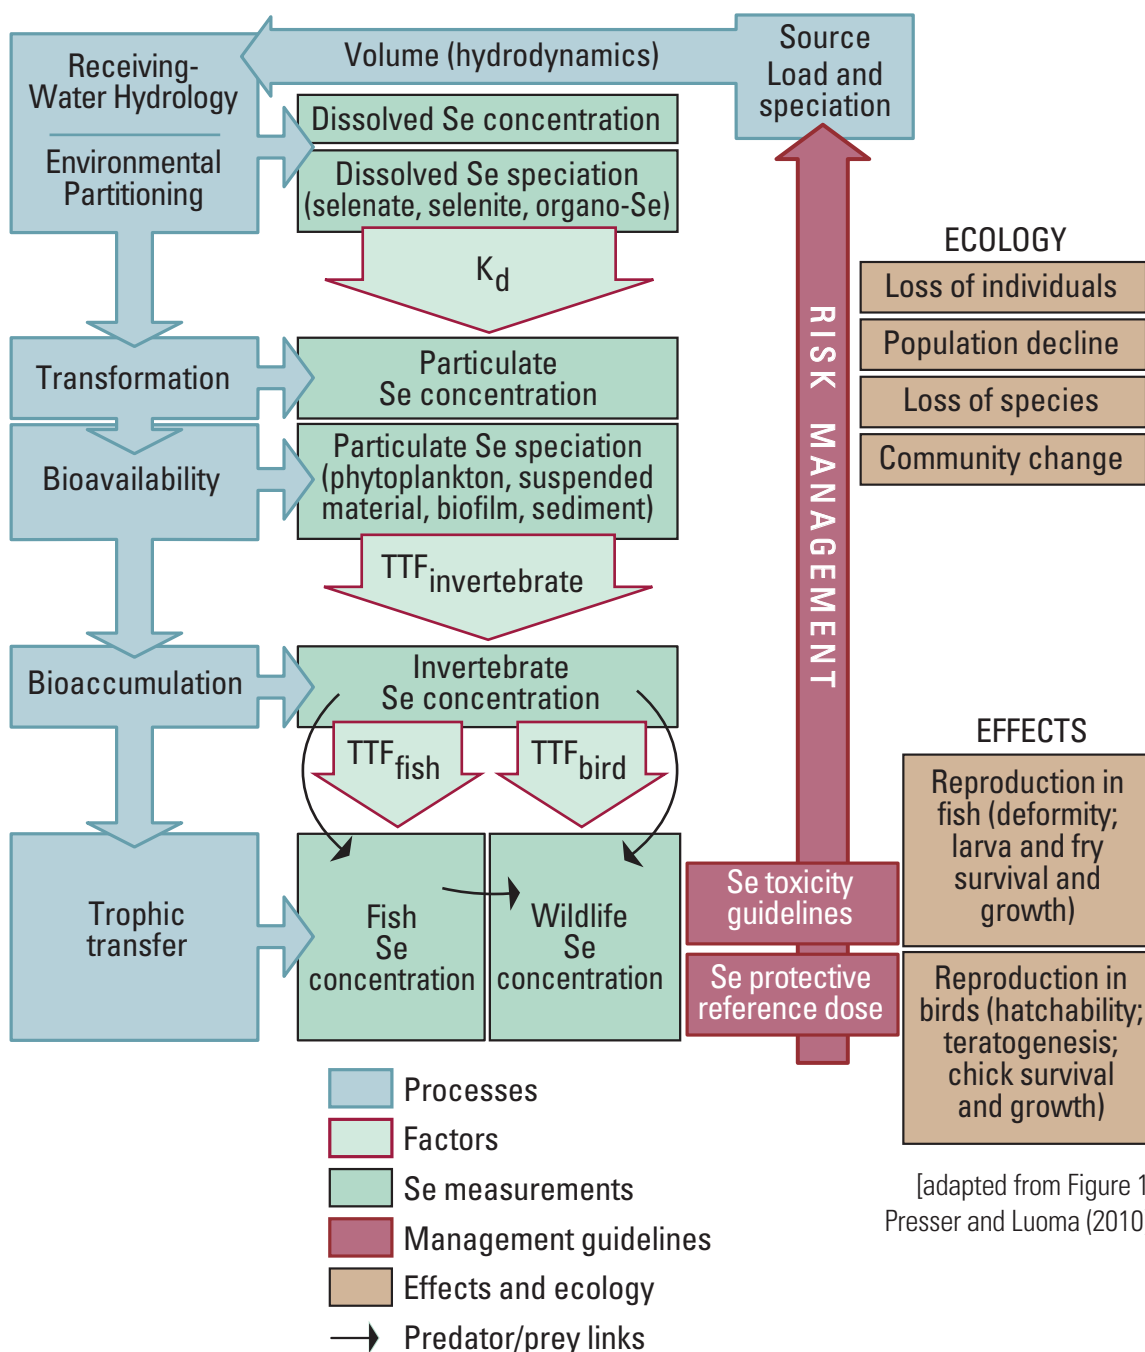

San Francisco Bay-Delta Selenium Model

[adapted from Figure 2, Presser and Luoma (2006)]

Figure 5. San Francisco Bay-Delta Selenium Model from Presser and Luoma (2006).

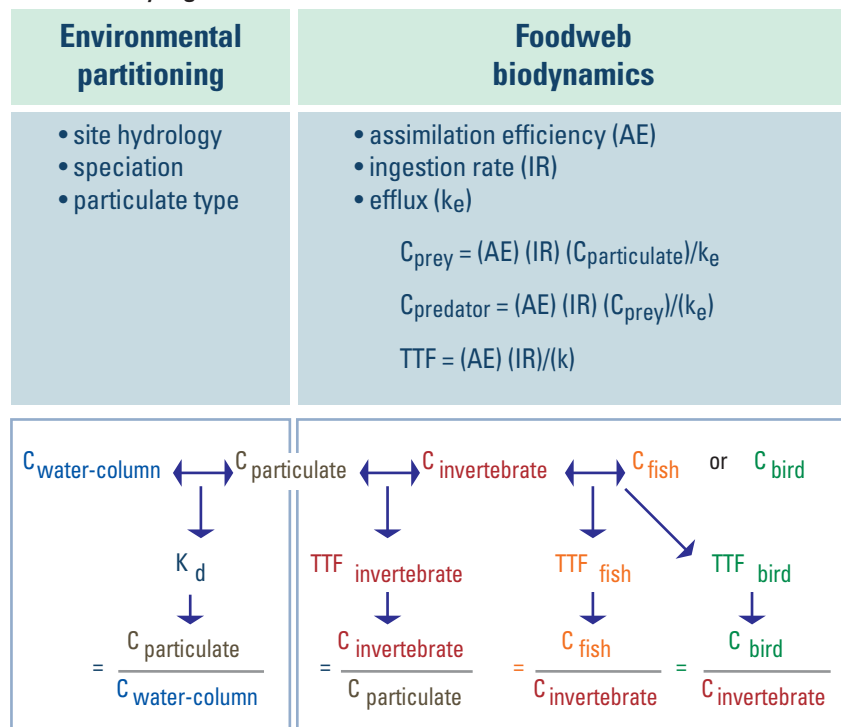

Ecosystem-Scale Selenium Model

[adapted from Figure 1, Presser and Luoma (2010)]

Figure 6. General ecosystem-scale selenium model from Presser and Luoma (2010). [K_d = empirically determined environmental partitioning factor between water and particulate material; TTF = biodynamic food web transfer factor between an animal and its food.]

A. Quantifying Processes

[adapted from Figure 2, Presser and Luoma (2010)]

B. Modeling Equations

$$C_{\text{invertebrate}} = (C_{\text{particulate}}) (TTF_{\text{invertebrate}})$$

$$C_{\text{fish}} = (C_{\text{invertebrate}}) (TTF_{\text{fish}})$$

$$C_{\text{bird}} = (C_{\text{invertebrate}}) (TTF_{\text{bird}})$$

Combined Equations

$$C_{\text{fish}} = (C_{\text{particulate}}) (TTF_{\text{invertebrate}}) (TTF_{\text{fish}})$$

$$C_{\text{bird}} = (C_{\text{particulate}}) (TTF_{\text{invertebrate}}) (TTF_{\text{bird}})$$

If longer food web

$$C_{\text{bird}} = (C_{\text{particulate}}) (TTF_{\text{invertebrate}}) (TTF_{\text{fish}}) (TTF_{\text{bird}})$$

$$C_{\text{bird}} = (C_{\text{invertebrate}}) (TTF_{\text{fish}}) (TTF_{\text{bird}})$$

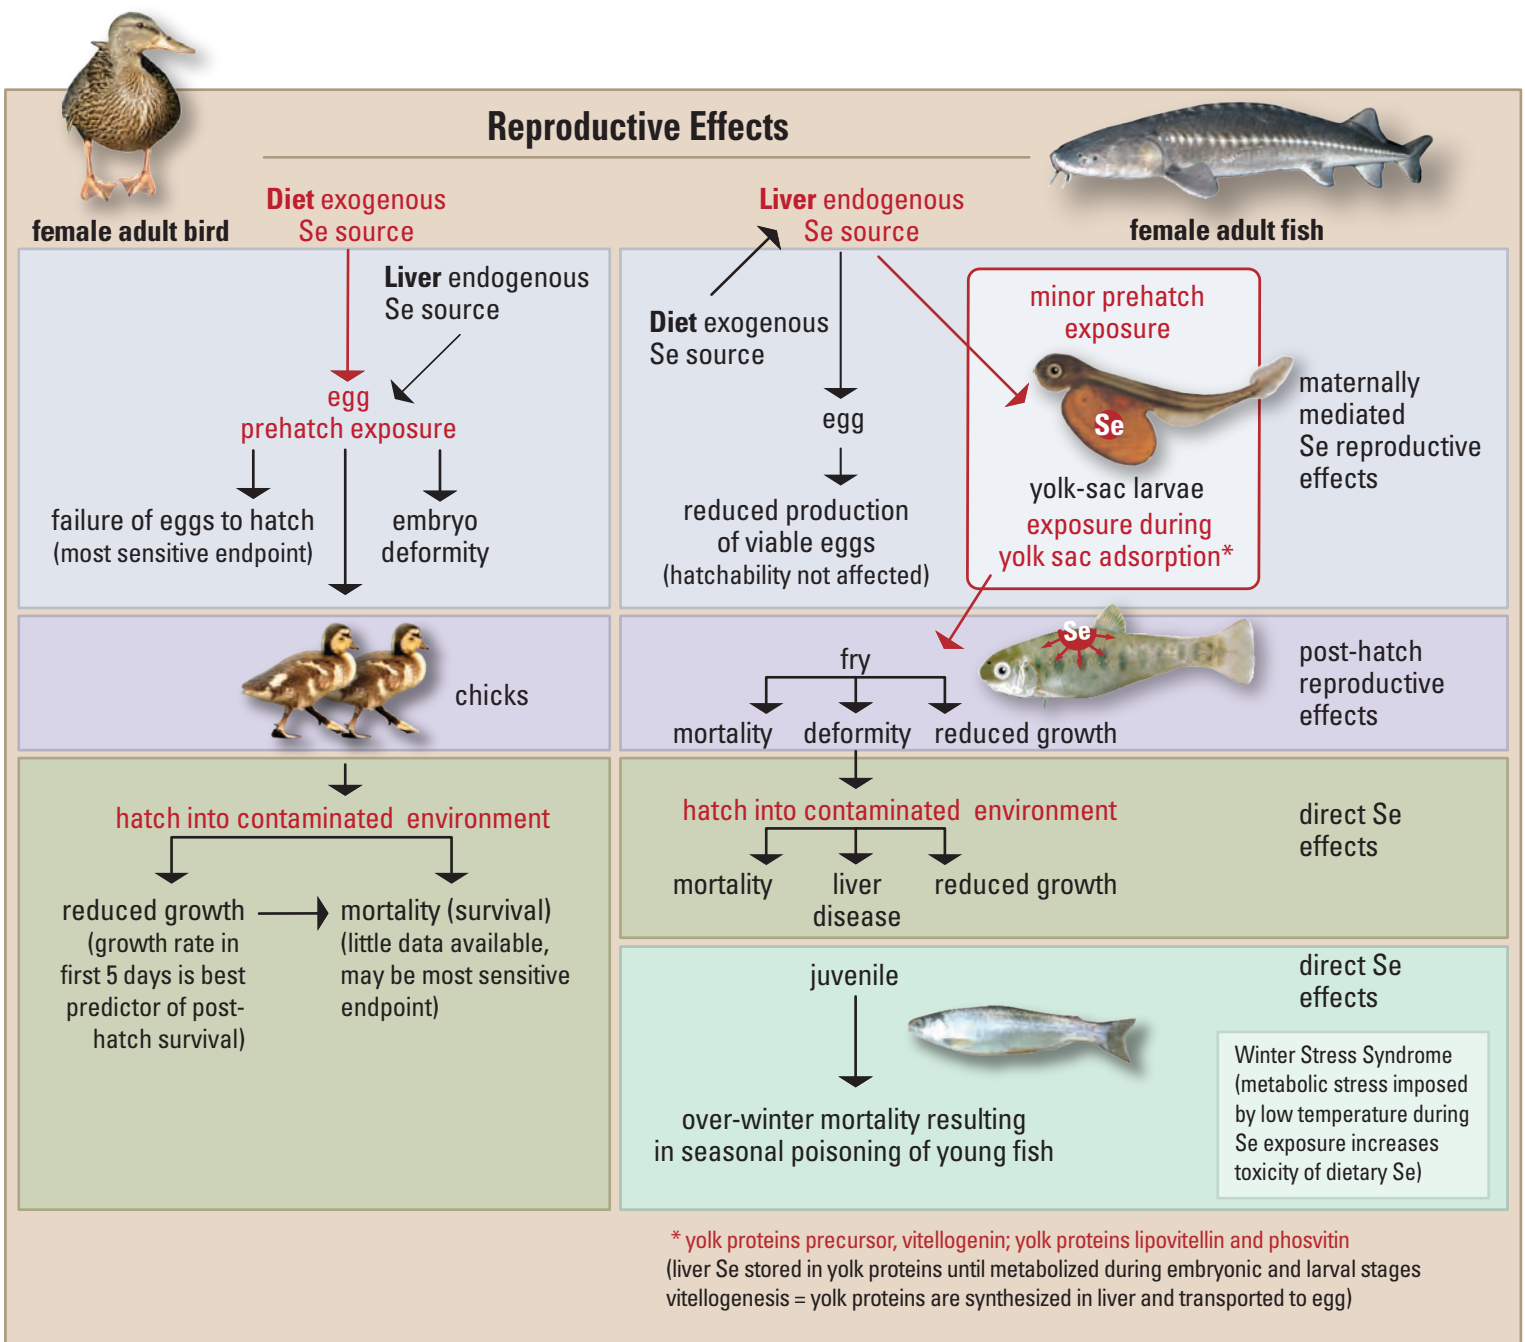

Translation to Water-Column Concentration

$$C_{\text{water}} = (C_{\text{fish}}) \div [(TTF_{\text{fish}}) (TTF_{\text{invertebrate}}) K_d]$$

$$C_{\text{water}} = (C_{\text{bird}}) \div [(TTF_{\text{bird}}) (TTF_{\text{invertebrate}}) K_d]$$

Figure 7. Quantifying processes (A) and modeling equations (B) for ecosystem-scale selenium modeling.

Reproductive Effects

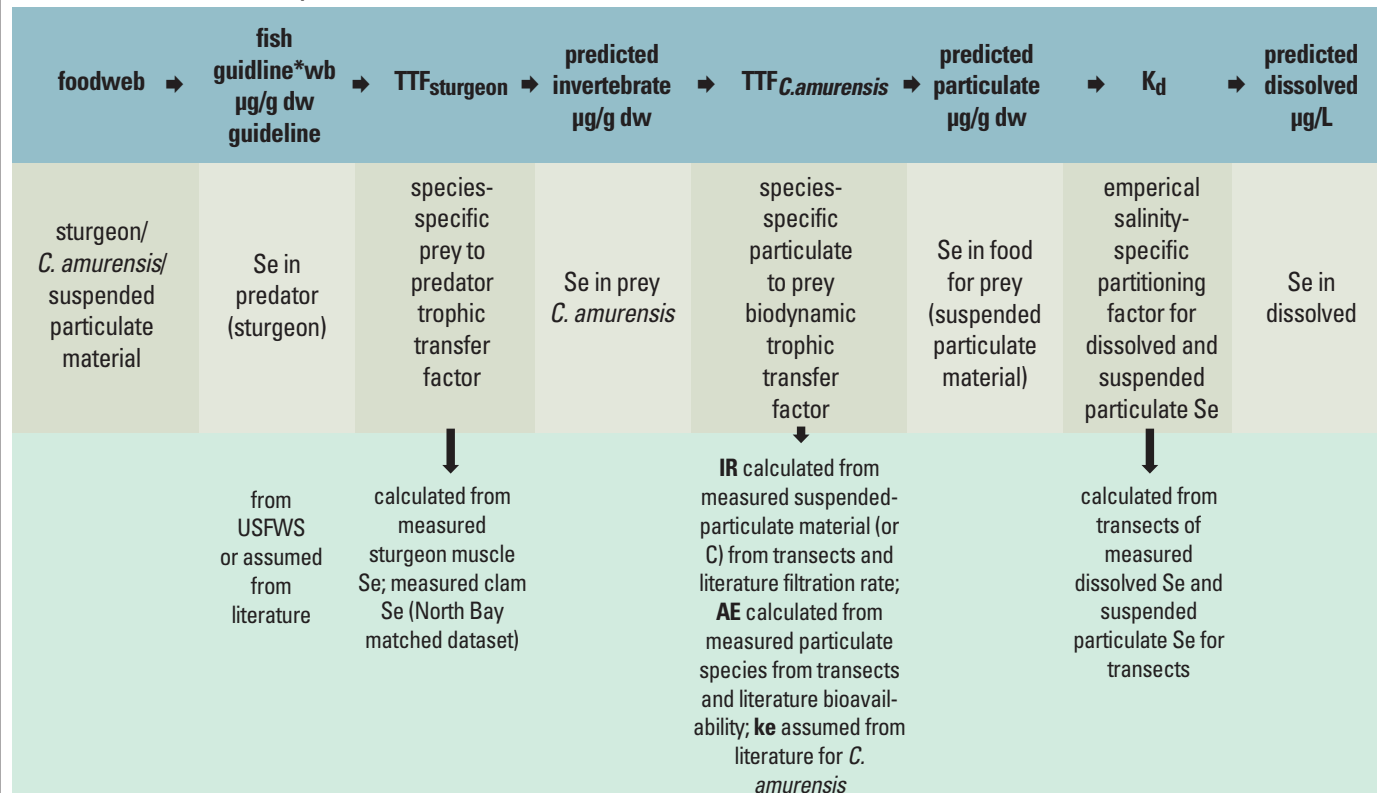

Chronic Effects in Adults

- compromised body condition (low body mass; edema)
- oxidative stress (increased susceptibility to disease due to suppressed immune system)
- decreased winter survival
- decreased reproductive fitness (decreased breeding propensity; reduced recruitment)
- behavioral impairment (missed breeding window; delayed timing of departure)
- lowered saline tolerance and gill effects in fish

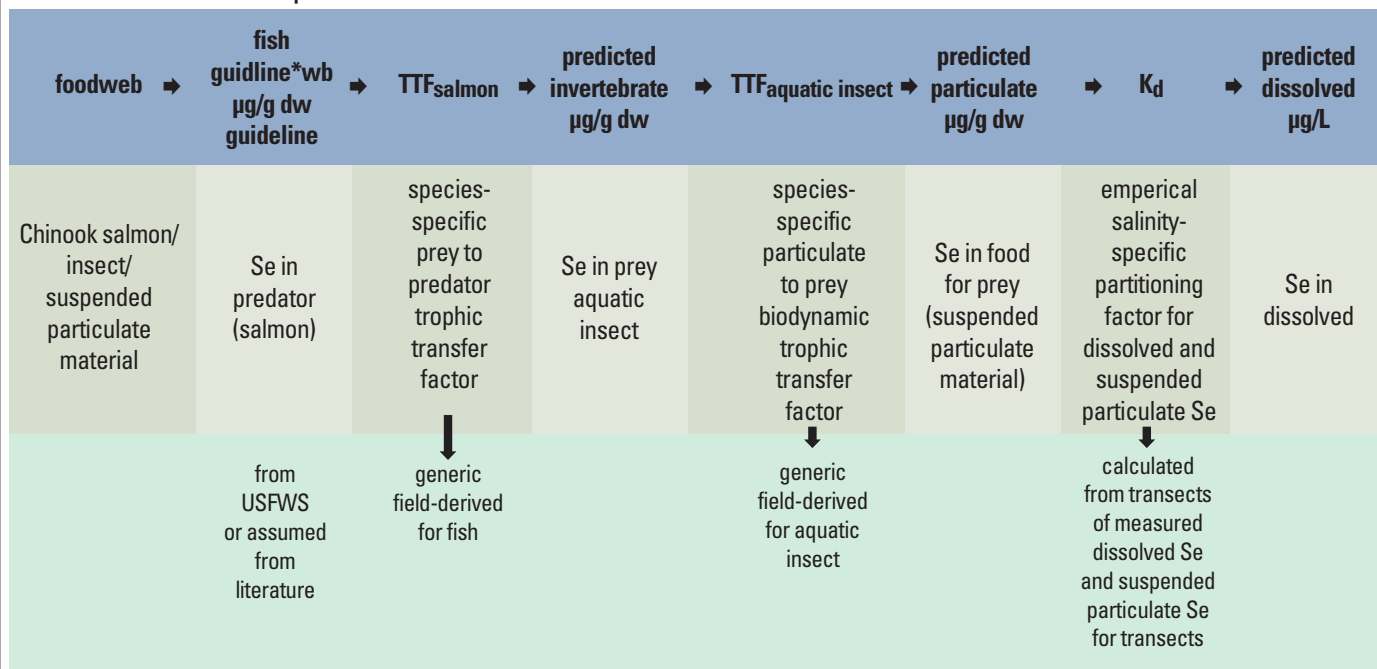

Figure 8. Ecotoxicology and effects of selenium for fish and birds.

Site-Specific Model Approach

A. seaward site-specific

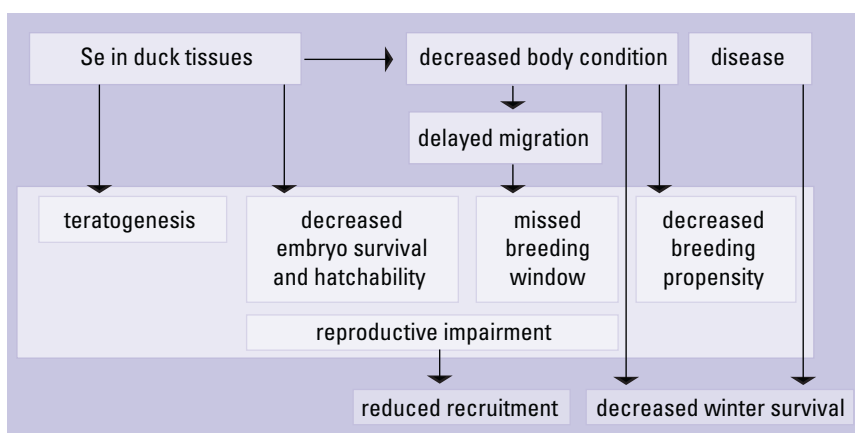

B. landward site-specific

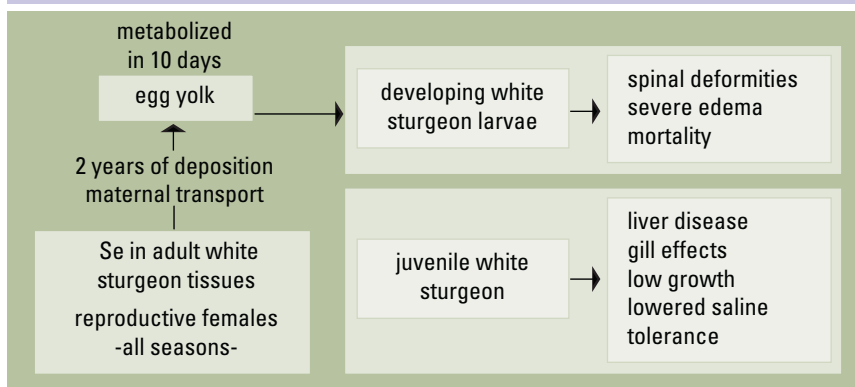

*USEPA, USFWS, or assumed from literature; wb = whole body, dw = dry weight.

Figure 9. Site-specific modeling approach for Bay-Delta seaward (A) and landward (B) locations.

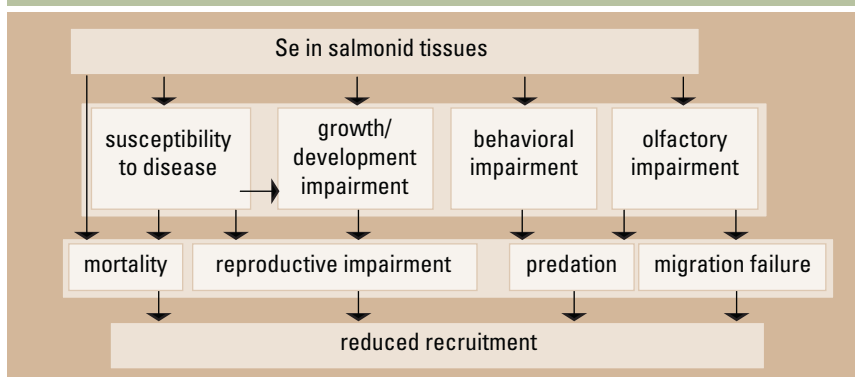

A.
Diving duck
Se effects model

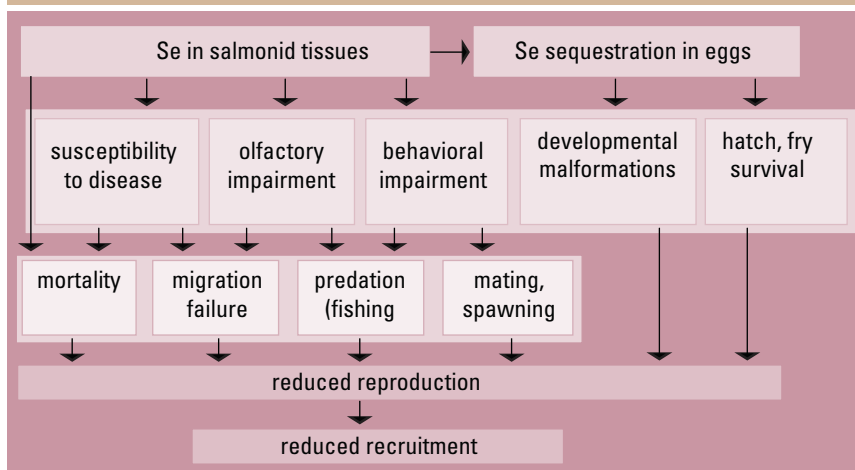

B.
White sturgeon
Se effects model

C.
Juvenile salmonids
(downstream migration)
Se effects model

D.
Salmonids
(upstream migration)
Se effects model

[adapted from Figure 7,
Presser et al. (in review)]

Figure 10. Selenium effects models for diving ducks (A), white sturgeon (B), and juvenile salmonids (C and D).

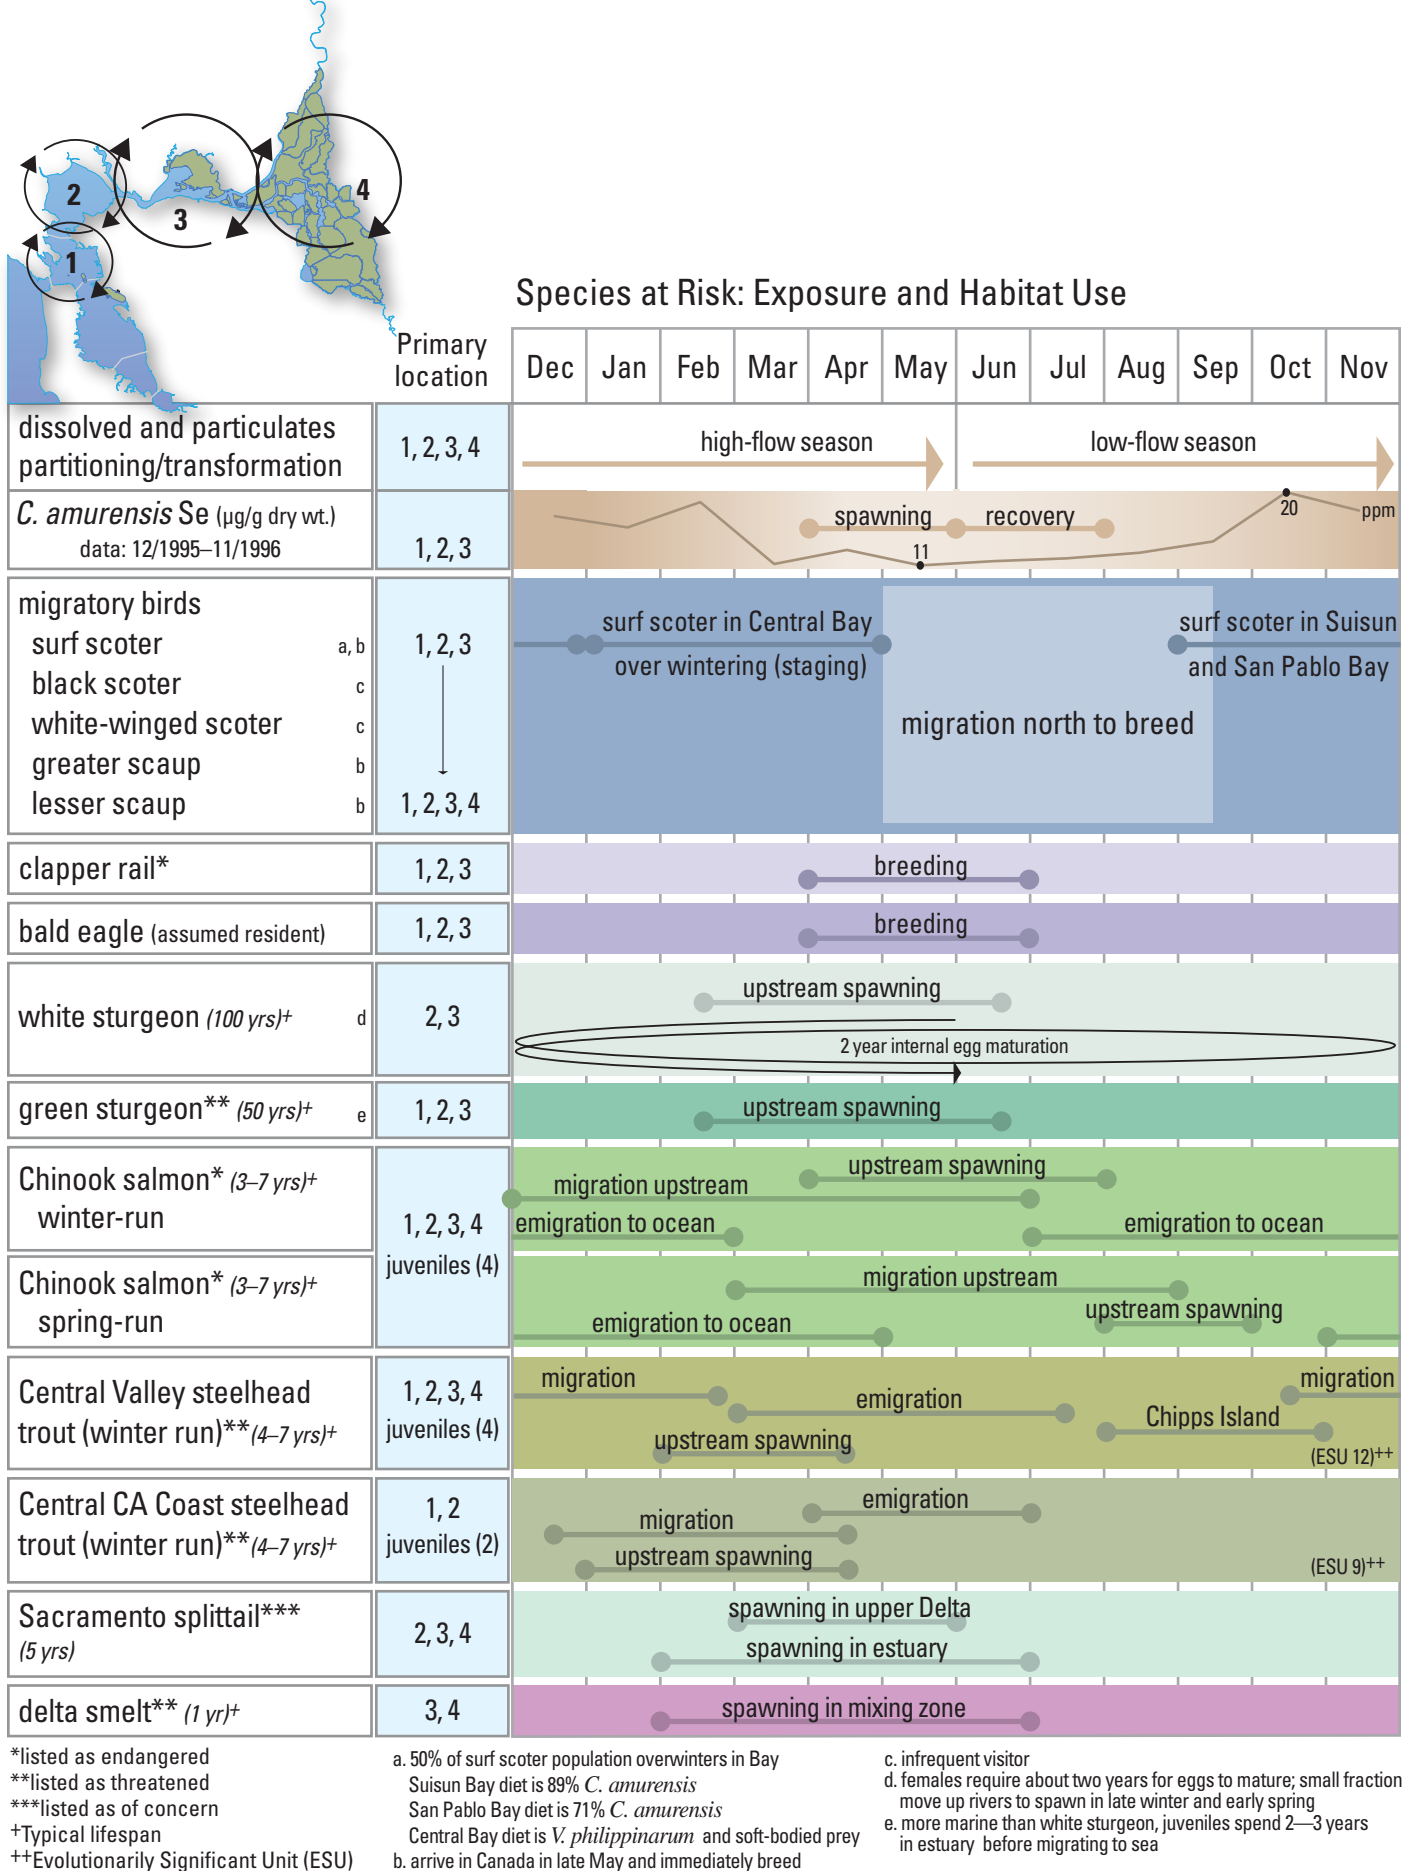

Figure 12. Exposure and habitat use for predators at risk, patterns of *C. amurensis* selenium concentrations (1996), and hydrologic categories that may relate to environmental partitioning of selenium for the Bay-Delta.
