${ }^{1}$ If samples will be collected at different depths at the same location, count each discrete sampling depth as a separate sampling location/station.
Summarize by matrix, the number of field and QC samples that will be collected for each analytical parameter and concentration level. Refer to EPA QA/G-5 Section 2.2 .5 for guidance.
${ }^{2}$ Define how the total number of samples was determined (i.e. Are QC samples included in the count?)
