Centredale Manor Restoration Project Site (Site Identification Code – 016P)

Removal Action Addendum 4 Administrative Record

Index

Compiled: October 2009
Released on CD-ROM: November 2010

Prepared by
EPA New England
Office of Site Remediation & Restoration

Introduction to the Collection

This is the Administrative Record for the Centredale Manor Restoration Project Site, North Providence, Rhode Island, Removal Action Addendum 4. This Administrative Record was compiled in October 2009 and subsequently released on CD-ROM in November 2010. This Administrative Record contains site-specific documents and a list of guidance documents used by EPA staff in selecting a removal action at the site. Impacts to the Woonasquatucket River and groundwater can be effectively reduced by excavation and disposal of contaminated soils in the area near the eastern bank of the river at the southern end of the Brook Village parking lot. The subsequent installation of an impermeable cap will prevent percolation of precipitation through underlying soils and further mitigate the migration of any residual contamination. The cap will also provide a physical barrier that minimizes the possibility of direct exposure to residual levels of dioxin in soils. The excavation/cap area, having an approximately ¼ -acre of surface area, will impact approximately 150 feet of the eastern bank of the Woonasquatucket River.

Specific removal activities conducted under this Potentially Responsible Party (PRP) – lead Removal Action include the following:

- Conducting a site walk with the cleanup contractor.
- Installing steel sheeting on the riverbank to control surface water.
- Performing limited excavation to specified lines and grades, as negotiated in the Administrative Order on Consent (AOC) and described in the EPA-approved Work Plan, sufficient to remove primary source dioxin-contaminated soils.
- Conducting dewatering and water treatment as necessary.
- Providing off-site disposal of primary dioxin-contaminated source soils.
- Backfilling and re-grading excavations to existing grades and slopes.
- Installing an engineered impermeable cap to control percolation of precipitation and to prevent direct contact with any remaining contaminated soils.
- Installing groundwater/pore water monitoring points near the groundwater/surface water interface.
- Conducting at least one round of ground water/pore water sample collection and analysis to evaluate the effectiveness of the engineered impermeable cap.
- Constructing erosion control armoring on the river bank.
- Repairing any response-related damages, including landscaping, pavement and walkways.

The Respondent PRP has a proposal and schedule for these specific actions, including a work plan, a safety plan, a traffic management plan, and other plans as necessary. The EPA On-Scene Coordinator (OSC) has reviewed all aspects of the proposal and provided comments before approval.

The Administrative Record is available for review at:

An Administrative Record is required by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 U.S.C. § 9613 (k), and EPA's implementing regulations, 40 CFR § 300.800.-825.

Please note that the compact disc(s) (CD-ROM) containing this Administrative Record may include index data and other metadata (hereinafter collectively referred to as metadata) to allow the user to conduct index searches and key word searches across all the files contained on the CD-ROM. All the information that appears in the metadata, including any dates associated with creation of the indexing data, is not part of the Administrative Record for the Site under CERCLA and shall not be construed as relevant to the documents that comprise the Administrative Record. These metadata are provided as a convenience for the user and are not part of the Administrative Record.

Questions about this Administrative Record should be directed to the EPA New England Site Manager.
