(1) T - Transformed; N - Normal; NP - Non-parametric; <4 - sample size too small to calculate 95% UCL

(2) Statistics: Maximum Detected Value (Max); 95% UCL of Transformed Data (95% UCL - T); 95% of Normal Data (95% UCL - N); 95% of Non-parametric Data (95% UCL - NP).

(3) Rationale

(a) Due to small sample size (<4), the maximum detected concentration is used.

(b) Shapiro-Wilk W Test indicates data are normally distributed.

(c) Shapiro-Wilk W Test indicates data are log-normally distributed.

(d) Shapiro-Wilk W Test indicates data are neither normally nor log-normally distributed.

(e) Recommended UCL exceeds maximum detected concentration. Therefore, maximum concentration is used for EPC.

(f) Due to high standard deviation, the maximum concentration is used.

(1) T - Transformed; N - Normal; NP - Non-parametric; <4 - sample size too small to calculate 95% UCL
 (2) Statistics: Maximum Detected Value (Max), 95% UCL of Transformed Data (95% UCL - T), 95% of Normal Data (95% UCL - N); 95% of Non-parametric Data (95% UCL - NP).
 (3) Rationale
 (a) Due to small sample size (<4), the maximum detected concentration is used.
 (b) Shapiro-Wilk W Test indicates data are normally distributed.
 (c) Shapiro-Wilk W Test indicates data are log-normally distributed.
 (d) Shapiro-Wilk W Test indicates data are neither normally nor log-normally distributed.
 (e) Recommended UCL exceeds maximum detected concentration. Therefore, maximum concentration is used for EPC.
 (f) Due to high standard deviation, the maximum concentration is used.

(1) T - Transformed; N - Normal; NP - Non-parametric; <4 - sample size too small to calculate 95% UCL

(2) Statistics: Maximum Detected Value (Max); 95% UCL of Transformed Data (95% UCL - T); 95% of Normal Data (95% UCL - N); 95% of Non-parametric Data (95% UCL - NP).

(3) Rationale

(a) Due to small sample size (<4), the maximum detected concentration is used.

(b) Shapiro-Wilk W Test indicates data are normally distributed.

(c) Shapiro-Wilk W Test indicates data are log-normally distributed.

(d) Shapiro-Wilk W Test indicates data are neither normally nor log-normally distributed.

(e) Recommended UCL exceeds maximum detected concentration. Therefore, maximum concentration is used for EPC.

(f) Due to high standard deviation, the maximum concentration is used.
