Notes:

[1] Unfiltered samples.

[2] Unless otherwise noted, taken from USEPA (1986 a,b; 1987, 1992 a, 1998, 2002).

[3] Metals criterion adjusted for hardness (103 mg/L as $CaCO_3$) and converted to unfiltered criterion (see equations provided in USEPA 2002).

[4] Criterion as presented in USEPA 2002; metals not corrected for hardness or conversion to unfiltered criterion.

[5] Analytes with maximum detected concentrations exceeding screening criteria were included in the BERA.

[6] Criterion reported as total recoverable metal and is not hardness dependant.

[7] Value reported for arsenic $^{3+}$.

[8] Value reported for chromium $^{3+}$, it is assumed that chromium in surface water is present in reduced form.

[9] As presented in Suter and Tsao (1996), Great Lakes Water Quality Initiative Tier II Methodology.

NAWQC - National Ambient Water Quality Criterion
BERA - Baseline Ecological Risk Assessment
COPC - Chemical of Potential Concern

[1] Unfiltered samples.

[2] Unless otherwise noted, taken from USEPA (1986a,b; 1987; 1992a, 1998, 2002).

[3] Metals criterion adjusted for hardness (192 mg/L as $CaCO_3$) and converted to unfiltered criterion (see equations provided in USEPA 2002).

[4] Criterion as presented in USEPA 2002; metals not corrected for hardness or conversion to unfiltered criterion.

[5] Analytes with maximum detected concentrations exceeding screening criteria were included in the BERA.

[6] Value is the summation of cis and trans isomers.

[7] No distinction made for isomers.

[8] Criterion reported as total recoverable metal and is not hardness dependant.

[9] Value reported for arsenic $^{3+}$.

[10] Value reported for chromium $^{3+}$, it is assumed that chromium in surface water is present in reduced form.

TABLE 4-16 (Continued)
CONTAMINANT SCREENING FOR SEDIMENT - ABERJONA RIVER STUDY AREA

Notes:

[1] SCV, SQB, and SQCs based on 1% sediment organic carbon content; where SCV, SQBs and SQCs are used, sediment organic carbon content was greater than 1%, unless indicated otherwise

[2] Analytes with maximum detected concentrations exceeding screening criteria were included in the BERA.

[3] Reasons for exclusion were that the maximum level was below the screening value (BSV) and/or the frequency of detection was less than or equal to 5% (DF).

[4] Screening value for benzo(k)fluoranthene

[5] Organic carbon content at SD-09-06-FW was 0.1%; if the SQB were adjusted based on 0.1% organic carbon content, the maximum level of dibenzofuran would be greater than the screening criterion.

[6] SQB was adjusted downward for organic carbon content at SD-01-07-FW (0.9%)

[7] Value for BHC in Persaud *et al.* (1993)

DF - detection frequency

BSV - below screening value

LC - laboratory contaminant

ERL - NOAA Effects Range-Low (Long *et al* ., 1995; Long and Morgan, 1990)

SCV - Secondary Chronic Value (Jones *et al* ., 1997)

SQC - USEPA Sediment Quality Criterion (USEPA, 1993 b,c) - used for endrin and dieldrin only

SQB - USEPA Office of Solid Waste and Emergency Response Sediment Quality Benchmark (USEPA, 1996)

LEL - Ontario Ministry of Environment and Energy Lowest Effect Level (Persaud *et al* ., 1993)

LEL*- Ontario Ministry of Environment and Energy Lowest Effect Level (OME, 1996)

TEL - Threshold Effects Level (Buchman, 1999)

Notes:

d - day

wk - week

gen - generations

UF - Uncertainty Factor

COPC - Chemical of Potential Concern

RTV - Reference Toxicity Value

NOAEL - No Observed Adverse Effect Level

LOAEL - Lowest Observed Adverse Effect Level

1 COPC or COPC and analyte/compound used in toxicological testing

2 Body weight for mouse and rat based on USEPA (1985b *cited in* Sample *et al*., 1996), other body weights are actual body weights of animals used in test

3 Lowest carcinogenic LOAEL from PAH toxicological data summarized in ATSDR, 1995b; test used benzo(a)pyrene. USEPA has classified benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, chrysene, and indeno(1,2,3-cd)pyrene as carcinogens (ATSDR, 1995b).

4 Lowest non-carcinogenic NOAEL from PAH toxicological data summarized in ATSDR (1995b); test used benzo(a)pyrene. USEPA has indicated that acenaphthylene, anthracene, benzo(g,h,i)perylene, fluoranthene, fluorene, phenanthrene and pyrene are not classifiable as carcinogens (ATSDR, 1995b). Carbazole and dibenzofuran were included in this group for the development of HQs.

5 RTVs for studies in which dose was administered five times per week were multiplied for a factor of 0.7.

6 LOAELs were divided by a UF of 10 to obtain NOAELs. The LD_{50} for iron was divided by 100 to obtain a NOAEL (10 for the LD_{50} to LOAEL conversion and 10 for the LOAEL to NOAEL conversion)

7 Documents cited are review documents (i.e., secondary sources). Citations for primary sources may be obtained from these documents.

8 Test NOAELs were adjusted for wildlife species body weight using the following equation: $NOAEL_{wildlife} = NOAEL_{test} * (BW_{test}/BW_{wildlife})^{0.25}$ (Sample *et al.*, 1996)

1 COPC or COPC and analyte/compound used in toxicological testing

2 Body weight for mouse and rat based on USEPA (1985b *cited in* Sample *et al*., 1996), other body weights are actual body weights of animals used in test

3 Lowest carcinogenic LOAEL from PAH toxicological data summarized in ATSDR, 1995b; test used benzo(a)pyrene. USEPA has classified benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, chrysene, and indeno(1,2,3-cd)pyrene as carcinogens (ATSDR, 1995b).

4 Lowest non-carcinogenic NOAEL from PAH toxicological data summarized in ATSDR (1995b); test used benzo(a)pyrene. USEPA has indicated that acenaphthylene, anthracene, benzo(g,h,i)perylene, fluoranthene, fluorene, phenanthrene and pyrene are not classifiable as carcinogens (ATSDR, 1995b). Carbazole and dibenzofuran were included in this group for the development of HQs.

5 RTVs for studies in which dose was administered five times per week were multiplied for a factor of 0.7.

6 LOAELs were divided by a UF of 10 to obtain NOAELs. The LD_{50} for iron was divided by 100 to obtain a NOAEL (10 for the LD_{50} to LOAEL conversion and 10 for the LOAEL to NOAEL conversion)

7 Documents cited are review documents (i.e., secondary sources). Citations for primary sources may be obtained from these documents.

8 Test NOAELs from test species were not adjusted for body weight of heron (Sample *et al*., 1996).

Notes:

d - day

wk - week

gen - generations

UF - Uncertainty Factor

COPC - Chemical of Potential Concern

RTV - Reference Toxicity Value

NOAEL - No Observed Adverse Effect Level

LOAEL - Lowest Observed Adverse Effect Level

1 COPC or COPC and analyte/compound used in toxicological testing

2 Body weight for mouse and rat based on USEPA (1985b *cited in* Sample *et al* ., 1996), other body weights are actual body weights of animals used in test

3 Lowest carcinogenic LOAEL from PAH toxicological data summarized in ATSDR, 1995b; test used benzo(a)pyrene. USEPA has classified benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, chrysene, and indeno(1,2,3-cd)pyrene as carcinogens (ATSDR, 1995b).

4 Lowest non-carcinogenic NOAEL from PAH toxicological data summarized in ATSDR (1995b); test used benzo(a)pyrene. USEPA has indicated that acenaphthylene, anthracene, benzo(g,h,i)perylene, fluoranthene, fluorene, phenanthrene and pyrene are not classifiable as carcinogens (ATSDR, 1995b). Carbazole and dibenzofuran were included in this group for the development of HQs.

5 RTVs for studies in which dose was administered five times per week were multiplied for a factor of 0.7.

6 LOAELs were divided by a UF of 10 to obtain NOAELs. The LD_{50} for iron was divided by 100 to obtain a NOAEL (10 for the LD_{50} to LOAEL conversion and 10 for the LOAEL to NOAEL conversion)

7 Documents cited are review documents (i.e., secondary sources). Citations for primary sources may be obtained from these documents.

8 Test NOAELs were adjusted for wildlife species body weight using the following equation: $NOAEL_{wildlife} = NOAEL_{test} * (BW_{test}/BW_{wildlife}) \wedge 0.25$ (Sample *et al.* , 1996)

ERED - U.S. Army Corps of Engineers and U.S. Environmental Protection Agency Environmental Residue-Effects Database (last update - February 1998)
Conc. - concentration
ID - identification number
na - no test data available in the ERED database for species group included in search
NOED - no observed effect dose
LOED - lowest observed effect dose

1 With exception of mercury, lipid normalized tissue concentrations were not calculated for inorganic COPCs because inorganics are not expected to preferentially concentrate in lipid material
2 The ERED database was queried for data on crayfish, lobsters and crabs, all members of Order Decapoda.
3 Citations for primary references are provided in the ERED database

a Test involved PCBs, specific congeners not indicated
