Potential Ecological Receptors - Murphy Wetland - Southwest Properties
Wells G&H Superfund Site - OU-2
Woburn, Massachusetts

Family	Common Name	Scientific Name	Guild[1]	Forage method	Breeding Substrate	Forested/Shrub[2]	Seasonally Ponded[2]
Amphibians							
Bufonidae	Eastern American Toad	*Bufo a. americanus*	I	Ground Ambusher	Water	X	X
	Fowler's Toad	*Bufo woodhousei fowleri*	I	Ground Ambusher	Water	X	X
Hylidae	Gray Treefrog	*Hyla versicolor*	I	Bark Ambusher	Water	X	X
	Northern Spring Peeper	*Pseudacris c. crucifer*	I	Riparian Ambusher	Water	X	X
Ranidae	Bullfrog	*Rana catesbeiana*	C	Water Ambusher	Water		X
	Green Frog	*Rana clamitans melanota*	I	Riparian Ambusher	Water	X	X
	Northern Leopard Frog	*Rana pipiens*	I	Riparian Ambusher	Water		X
Salamandridae	Red-spotted Newt	*Notophthalmus viridescens*	I	Water Gleaner	Water	X	X
Birds							
Anatidae	*Mallard	*Anas platyrhynchos*	G	Water Forager	Riparian Ground		X
	Wood Duck	*Aix sponsa*	G	Water Forager	Riparian Tree Cavity		X
Bombycillidae	Cedar Waxwing	*Bombycilla cedrorum*	F	Upper Canopy Gleaner	Tree-Twig	X	
Corvidae	American Crow	*Corvus brachyrhynchos*	O	Ground Gleaner	Tree-Branch	X	
	*Blue Jay	*Cyanocitta cristata*	O	Ground Gleaner	Tree-Branch	X	
Fringillidae	American Goldfinch	*Carduelis tristis*	O	Ground Gleaner	Shrub	X	
	American Tree Sparrow	*Spizella arborea*	O	Ground Gleaner	N/A		X
	*Northern Cardinal	*Cardinalis cardinalis*	O	Ground Gleaner	Shrub	X	
	*Song Sparrow	*Melospiza melodia*	O	Ground Gleaner	Ground-Herb	X	X
	Swamp Sparrow	*Melospiza georgiana*	I	Ground Gleaner	Riparian Ground	X	
Hirundinidae	Tree Swallow	*Tachycineata bicolor*	I	Air Screener	Tree Cavity-Crevice	X	X
Icteridae	*Common Grackle	*Quiscalus quiscula*	O	Ground Gleaner	Tree-Branch		X
	Red-winged Blackbird	*Agelaius phoeniceus*	O	Ground Gleaner	Shrub		X
Mimidae	Gray Catbird	*Dumetella carolinensis*	O	Ground Gleaner	Shrub	X	X
Paridae	*Black-capped Chickadee	*Parus atricapillus*	I	Lower Canopy Gleaner	Tree Cavity-Crevice	X	
Parulidae	Blue-winged Warbler	*Vermivora pinus*	I	Lower Canopy Gleaner	Ground-Herb	X	
	Common Yellowthroat	*Geothlypis trichas*	I	Lower Canopy Gleaner	Ground-Herb	X	X
	Yellow Warbler	*Dendroica petechia*	I	Lower Canopy Gleaner	Shrub	X	X
Picidae	Downy Woodpecker	*Picoides pubescens*	I	Bark Gleaner	Tree Cavity-Crevice	X	
Strigidae	Eastern Screech-Owl	*Otus asio*	C	Ground Pouncer	Tree Cavity-Crevice	X	
Sturnidae	*European Starling	*Sturnus vulgaris*	O	Ground Gleaner	Buildings	X	
Sylviidae	Blue-gray Gnatcatcher	*Polioptila caerulea*	I	Upper Canopy Gleaner	Tree-Branch	X	
Troglodytidae	Marsh Wren	*Cistothorus palustris*	I	Ground Gleaner	Riparian Ground		X
Turdidae	*American Robin	*Turdus migratorius*	O	Ground Gleaner	Tree-Branch	X	
Tyrannidae	Eastern Phoebe	*Sayornis phoebe*	I	Air Sallier	Buildings		X

Potential Ecological Receptors - Murphy Wetland - Southwest Properties
Wells G&H Superfund Site - OU-2
Woburn, Massachusetts

Family	Common Name	Scientific Name	Guild[1]	Forage method	Breeding Substrate	Forested/Shrub[2]	Seasonally Ponded[2]
Mammals							
	Red Fox	*Vulpes vulpes*	O	Ground Forager	Terrestrial Subsurface	X	X
Cervidae	*White-tailed Deer	*Odocoileus virginianus*	H	Ground Grazer	Ground-Herb	X	X
Cricetidae	Meadow Vole	*Microtus pennsylvanicus*	H	Ground Grazer	Terrestrial Subsurface		X
	Muskrat	*Onodatra zibethicus*	H	Water Grazer	Riparian Subsurface		X
	S. Red-backed Vole	*Clethrionomys gapperi*	H	Ground Grazer	Terrestrial Subsurface	X	
	White-footed Mouse	*Peromyscus leucopus*	O	Ground Forager	Terrestrial Subsurface	X	X
Didelphidae	Virginia Opossum	*Didelphis virginiana*	O	Ground Forager	Tree Cavity-Crevice	X	X
Leporidae	Eastern Cottontail	*Sylvilagus floridanus*	H	Ground Grazer	Ground-Herb	X	X
	Striped Skunk	*Mephitis mephitis*	O	Ground Forager	Terrestrial Subsurface	X	
Procyonidae	Raccoon	*Procyon lotor*	O	Ground Forager	Tree Cavity-Crevice	X	X
Soridae	Short-tailed Shrew	*Blarina brevicauda*	I	Ground Gleaner	Terrestrial Subsurface	X	X
Talpidae	Star-nosed Mole	*Condylura cristata*	I	Water Gleaner	Riparian Subsurface	X	X
Vespertilionidae	Big Brown Bat	*Eptesicus fuscus*	I	Air Hawker	Buildings	X	X
	Little Brown Bat	*Myotis lucifugus*	I	Air Hawker	Buildings	X	X
Zapodidae	Meadow Jumping Mouse	*Zapus hudsonius*	O	Ground Forager	Ground-Herb	X	X
Reptiles							
Chelydridae	Snapping Turtle	*Chelydra serpentina*	O	Bottom Forager	Riparian Subsurface		X
Colubridae	E. Smooth Green Snake	*Opheodrys v. vernalis*	I	Ground Ambusher	Terrestrial Subsurface	X	
	Eastern Garter Snake	*Thamnophis s. sirtalis*	C	Ground Ambusher	Terrestrial Subsurface	X	
	Eastern Ribbon Snake	*Thamnophis s. sauritus*	C	Water Ambusher	Riparian Subsurface		X
	Northern Brown Snake	*Storeria d. dekayi*	I	Ground Ambusher	Terrestrial Subsurface	X	
	Northern Redbelly Snake	*Storeria o. occipitomaculata*	I	Ground Ambusher	Terrestrial Subsurface	X	
	Northern Water Snake	*Nerodia s. sipedon*	C	Water Ambusher	Riparian Subsurface	X	X
Emydidae	Eastern Painted Turtle	*Chrysemys p. picta*	O	Bottom Forager	Terrestrial Subsurface		X

* Species (or sign) noted during site inspections of Site by TRC ecologists.

[1] Guilds include: C: Carnivore G: Granivore I: Insectivore
F: Frugivore H: Herbivore O: Omnivore

[2] X indicates that the species potentially could use the habitat based on scientific literature and professional opinion.

Table 4-8
Assessment Endpoints and Measurement Endpoints
Murphy Wetland - Southwest Properties
Wells G&&H Superfund Site - OU-2
Woburn, Massachusetts

Assessment Endpoints	Measurement Endpoints	Area(s)
Aquatic System		
Water Column Invertebrate Community Survival/ Reproduction	Comparison of surface water COPEC concentrations with acute and chronic ambient water quality criteria and lowest acute and chronic adverse effect levels reported in scientific literature.	Seasonally Ponded Area
Macrobenthic Community Diversity and Abundance	Comparison of bulk sediment COPEC concentrations with sediment guidelines associated with adverse effects to benthic biota.	Seasonally Ponded Area
Mammalian Herbivore Survival/Reproduction/Growth	Comparison of estimated COPEC exposure doses received by muskrat to chronic NOAEL/LOAEL survival, reproductive, or growth effects reported in scientific literature.	Seasonally Ponded Area
Avian Omnivore Survival/Reproduction/Growth	Comparison of estimated COPEC exposure dose received by mallard to chronic NOAEL/LOAEL survival, reproductive, or growth effect concentrations reported in literature.	Seasonally Ponded Area
Terrestrial System		
Mammalian Insectivore Survival/Reproduction/Growth	Comparison of estimated COPEC exposure dose received by short-tailed shrew to chronic NOAEL/LOAEL survival, reproductive, or growth effect concentrations reported in literature.	Seasonally Ponded Area Forested/Shrub Area

TABLE 4-9
EXPOSURE FACTORS FOR MUSKRAT
Murphy Wetland - Southwest Properties
Wells G&H Superfund Site - OU-2
Woburn, Massachusetts

Character	Value	Source	Comment
BODY WEIGHT	1.35 kg	Dozier (1950) cited in USEPA (1993)	Adult breeding female in New York in winter
FOOD CONSUMPTION RATE	0.0794 kg/day (dry weight)	Nagy (2001)	Value for herbivorous mammals
WATER CONSUMPTION RATE	0.130 L/day	Calder and Braun (1983) equation cited in USEPA (1993)	Based on body weight cited above
SEDIMENT INGESTION	0.0019 kg/day (dry weight)	Beyer et al. (in press) cited in USEPA (1993)	Based on 2.4% of diet (dry weight) for meadow vole
COMPOSITION OF DIET	90% plant, 10% aquatic invertebrates*	Martin *et al.* (1951) and USEPA (1993)	A portion of the muskrat diet may be animal matter. Ten percent was selected as a conservative value for the Murphy Wetland seasonally ponded area.
% MOISTURE IN DIET	aquatic invertebrates = 65% plants = 87.3%	USEPA (1993) Aberjona River BERA (EPA, 2004)	Average % moistures
AREAL SITE USE FACTOR	1	USEPA (1993)	Home range smaller than study area
TEMPORAL USE FACTOR	1	USEPA (1993)	No migration

Notes: * Exposure to aquatic invertebrates was estimated based on COPEC concentrations modeled to invertebrates

TABLE 4-10
EXPOSURE FACTORS FOR MALLARD
Murphy Wetland - Southwest Properties
Wells G&H Superfund Site - OU-2
Woburn, Massachusetts

Character	Value	Source	Comment
BODY WEIGHT	1.04 kg	Nelson and Martin (1953) cited in USEPA (1993)	Mean of adult females throughout North America
FOOD CONSUMPTION RATE	0.0744 kg/day (dry weight)	Nagy (2001)	Value for all birds
WATER CONSUMPTION RATE	0.058 L/day	Calder and Braun (1983) equation cited in USEPA (1993)	Based on body weight cited above
SEDIMENT INGESTION	0.0015 kg/day (dry weight)	Beyer et al. (in press) cited in USEPA (1993)	Based on 2% of diet (dry weight) for mallard
COMPOSITION OF DIET	67% invertebrates*, 33% plants	Swanson *et al.* (1985) *cited in* USEPA (1993)	
% MOISTURE IN DIET	aquatic invertebrates = 65% plants = 87.3%	USEPA (1993) Aberjona River BERA (EPA, 2004)	Average % moistures
AREAL SITE USE FACTOR	0.05	USEPA (1993)	Home range assumed to be 40 acres which is considerably larger than 0.8 acre seasonally ponded area. Conservatively estimated to provide 5% of home range.
TEMPORAL USE FACTOR	0.5	USEPA (1993)	Surface water only present seasonally. Assumed to be present 6 months of the year.

Notes: * Exposure to aquatic invertebrates was estimated based on COPEC concentrations modeled to invertebrates

TABLE 4-11
EXPOSURE FACTORS FOR SHREW
Murphy Wetland - Southwest Properties
Wells G&H Superfund Site - OU-2
Woburn, Massachusetts

Character	Value	Source	Comment
BODY WEIGHT	0.015 kg	Schlessinger and Potter (1974) cited in USEPA (1993)	Breeding adults
FOOD CONSUMPTION RATE	0.0020 kg/day (dry weight)	Nagy (2001)	Value for insectivorous mammals
WATER CONSUMPTION RATE	0.003 L/day	Chew (1951) cited in Sample and Suter (1994)	-
SEDIMENT/SOIL INGESTION	0.0003 kg/day (dry weight)	Sample and Suter (1994)	Based on 13% of diet (dry weight basis)
COMPOSITION OF DIET	31.4% earthworms	Whitaker and Ferraro (1963) *cited in* Sample and Suter (1994)	Remainder of diet assumed to contain significantly lower COPEC burdens (EPA, 2004)
% MOISTURE IN DIET	84% (water content of earthworms)	Sample and Suter (1994)	-
AREAL SITE USE FACTOR	100%	USEPA (1993)	Home range smaller than study area
TEMPORAL USE FACTOR	1 and 0.67	USEPA (1993)	No migration out of forested/scrub-shrub wetland while seasonally ponded area assumed to be accessible to shrews for 8 months of the year.

NOTES:
Plant Uptake Factors from Aberjona River BERA (M&E, 2003) except VOCs, Aroclor 1254 and PCB congeners.
Plant Uptake Factor of 0.00 indicates COPEC was not detected in plant tissue samples indicating no uptake (EPA, 2004).
Plant Uptake Factors for VOCs and PCB congeners from equation provided in Travis and Arms, 1988 relating uptake to Kow.
Kow values for VOCs and PCB congeners presented in Table 4-13. Aroclor 1254 uptake factor taken directly from Travis and Arms (1988).
Plant concentrations are on a dry weight basis.

Notes:

[a] $\log_{10}(K_{oc}) = 0.983 \log_{10}(K_{ow}) + 0.00028$ (equations in footnotes a-e from Sample *et al* ., 1997)

[b] $K_d = f_{oc} \times K_{oc;}$ average $f_{oc} = 0.037$

[c] $C_w = C_s/K_d$

[d] $\log_{10} K_{bw} = \log_{10} K_{ow} - 0.6$

[e] $C_v = K_{bw} \times C_w$ (organics only)

Values for Cd, Cr, Cu, Pb, Se, and Zn based on literature derived sediment-biota uptake data provided in Sample et al. (1997).
Concentration factors for Hg taken from USEPA (1999). An uptake factor of 0.5 was conservatively assumed
for Tl and V. Cr (VI) factor based on Cr uptake data.

C_s - Mean COPEC concentration in surface soil (mg/kg)
COPEC - Chemical of Potential Ecological Concern
K_{ow} - Octanol/Water Partitioning Coefficient (Unitless)
K_{oc} - Water/Soil Organic Carbon Partitioning Coefficient (L/kg)
f_{oc} - Fraction of Organic Carbon in Soil (Unitless)
K_d - Soil/Water Partitioning Coefficient (L/kg Soil)
C_w - Water Concentration (mg/L)
K_{bw} - Biota/Water Partitioning Coefficient (L/kg Organism)
C_v - Concentration in Worms (mg/kg - dry weight)

Notes:

[1] Mean sediment concentration from Appendix C.

[2] Mean aquatic vegetation concentration from Table 4-12.

[3] Mean aquatic invertebrate concentration from Table 4-13.

[4] Mean surface water concentration from Appendix C.

[5] from Table 4-9.

[6] Mean plant concentration * food ingestion rate * percent of diet comprised of plants (90%) * area use factor * temporal use factor divided by body weight.

[7] Mean invertebrate concentration * food ingestion rate * percent of diet comprised of invertebrates (10%) * area use factor * temporal use factor divided by body weight.

[8] Mean sediment concentration * sediment ingestion rate * area use factor * temporal use factor divided by body weight.

[9] Mean surface water concentration * surface water ingestion rate * area use factor * temporal use factor divided by body weight.

[10] Sum of mean vegetation, invertebrate, sediment and surface water exposure doses.

Table 4-18
Muskrat - Maximum/Mean UCL Estimated COPEC Exposure Dose - Seasonally Ponded Area
Murphy Wetland - Southwest Properties
Wells G&H Superfund Site - OU-2
Woburn, Massachusetts

Notes:

[1] Maximum sediment concentration from Appendix C.

[2] Maximum aquatic vegetation concentration from Table 4-12.

[3] Maximum aquatic invertebrate concentration from Table 4-14.

[4] Maximum surface water concentration from Appendix C.

[5] from Table 4-9.

[6] Maximum plant concentration * food ingestion rate * percent of diet comprised of plants (90%) * area use factor * temporal use factor divided by body weight.

[7] Maximum invertebrate concentration * food ingestion rate * percent of diet comprised of invertebrates (10%) * area use factor * temporal use factor divided by body weight.

[8] Maximum sediment concentration * sediment ingestion rate * area use factor * temporal use factor divided by body weight.

[9] Maximum surface water concentration * surface water ingestion rate * area use factor * temporal use factor divided by body weight.

[10] Sum of maximum vegetation, invertebrate, sediment and surface water exposure doses.

Table 4-19

Notes:

[1] Mean sediment concentration from Appendix C.

[2] Mean aquatic vegetation concentration from Table 4-12.

[3] Mean aquatic invertebrate concentration from Table 4-13.

[4] Mean surface water concentration from Appendix C.

[5] from Table 4-10.

[6] Mean plant concentration * food ingestion rate * percent of diet comprised of plants (67%) * area use factor * temporal use factor divided by body weight.

[7] Mean invertebrate concentration * food ingestion rate * percent of diet comprised of invertebrates (33%) * area use factor * temporal use factor divided by body weight.

[8] Mean sediment concentration * sediment ingestion rate * area use factor * temporal use factor divided by body weight.

[9] Mean surface water concentration * surface water ingestion rate * area use factor * temporal use factor divided by body weight.

[10] Sum of mean vegetation, invertebrate, sediment and surface water exposure doses.

Table 4-20
Mallard - Maximum/Mean UCL Estimated COPEC Exposure Dose - Seasonally Ponded Area

Notes:

[1] Maximum sediment concentration from Appendix C.

[2] Maximum aquatic vegetation concentration from Table 4-12.

[3] Maximum aquatic invertebrate concentration from Table 4-14.

[4] Maximum surface water concentration from Appendix C.

[5] from Table 4-10.

[6] Maximum plant concentration * food ingestion rate * percent of diet comprised of plants (90%) * area use factor * temporal use factor divided by body weight.

[7] Maximum invertebrate concentration * food ingestion rate * percent of diet comprised of invertebrates (10%) * area use factor * temporal use factor divided by body weight.

[8] Maximum sediment concentration * sediment ingestion rate * area use factor * temporal use factor divided by body weight.

[9] Maximum surface water concentration * surface water ingestion rate * area use factor * temporal use factor divided by body weight.

[10] Sum of maximum vegetation, invertebrate, sediment and surface water exposure doses.

Table 4-21

Notes:

[1] Mean sediment concentration from Appendix C.

[2] Mean invertebrate concentration from Table 4-13.

[3] Mean surface water concentration from Appendix C.

[4] from Table 4-11.

[5] Mean invertebrate concentration * food ingestion rate * percent of diet comprised of invertebrates (10%) * area use factor divided by body weight.

[6] Mean sediment concentration * sediment ingestion rate * area use factor divided by body weight.

[7] Mean surface water concentration * surface water ingestion rate * area use factor divided by body weight.

[8] Sum of mean invertebrate, sediment and surface water exposure doses.

Notes:

COPEC - Chemical of Potential Ecological Concern

TRV - Toxicity Reference Value

NOAEL - No Observed Adverse Effect Level

LOAEL - Lowest Observed Adverse Effect Level

Low MW PAHs - low molecular weight polycyclic aromatic hydrocarbons

High MW PAHs - high molecular weight polycyclic aromatic hydrocarbons

1 Body weight for mouse and rat based on USEPA (1985b *cited in* Sample *et al*., 1996), other body weights are actual body weights of animals used in test

2 LOAELs were divided by a uncertainty factor of 5 to obtain NOAELs. The LD_{50} for acetophenone was divided by 100 to obtain a NOAEL

3 Documents cited are review documents (i.e., secondary sources). Citations for primary sources may be obtained from these documents.

4 Test NOAELs were adjusted for wildlife species body weight using the following equation: $NOAEL_{wildlife} = NOAEL_{test} * (BW_{test}/BW_{wildlife})^{0.25}$ (Sample *et al.*, 1996)

Notes:

mg/kg - milligrams per kilogram (dry weight) or parts per million (ppm).

COPEC - contaminant of potential ecological concern

NA - No sediment TRV available for this compound.

VOCs - Volatile Organic Compounds

SVOCs - Semivolatile Organic Compounds.

PCBs - Polychlorinated Biphenyls

* Includes only samples where COPEC was detected or, if non-detect, detection limit was less than 2 times TRV.

Notes:

COPEC - Chemical of Potential Ecological Concern

TRV - Toxicity Reference Value

NOAEL - No Observed Adverse Effect Level

LOAEL - Lowest Observed Adverse Effect Level

1 Body weight for mouse and rat based on USEPA (1985b *cited in* Sample *et al*., 1996), other body weights are actual body weights of animals used in test

2 NOAELs were multiplied by a uncertainty factor of 5 to obtain LOAELs.

3 Documents cited are review documents (i.e., secondary sources). Citations for primary sources may be obtained from these documents.

4 Test LOAELs were adjusted for mammalian wildlife species body weight using the following equation: $LOAEL_{wildlife} = LOAEL_{test} * (BW_{test}/BW_{wildlife})^{0.25}$ (Sample *et al.*, 1996)

Notes:
ug/m3 - micrograms per cubic meter.
J - Estimated value.
U - Compound was not detected at specified quantitation limit.
UJ - Estimated non-detect.
Values in **Bold** indicate the compound was detected.
APH - Air-Phase Petroleum Hydrocarbons.
SIM - Selected Ion Monitoring.
TO - Toxic organics.
AMB - Outdoor ambient air sample.
IA - Indoor air sample.
VP - Subslab soil gas sample.

N/A = Not Applicable or Not Available
J = Estimated Value
UCL = Upper Confidence Limit

[1] The lesser value of the maximum detected concentration and the 95% UCL concentration, as used in the maximum exposure case calculations, is provided.

[2] 95% UCL References:

* Maximum detected value is shown
1 Sample size too small to calculate 95% UCL (<4)
2 Normal data - Student's-t
3 Lognormal data - H-UCL
4 Lognormal data - 95% Chebyshev (MVUE) UCL
5 Lognormal data - 99% Chebyshev (MVUE) UCL
6 Nonparametric data - CLT
7 Nonparametric data - Jackknife
8 Nonparametric data - Standard Bootstrap
9 Nonparametric data - Bootstrap-t
10 Nonparametric data - Chebyshev (Mean, Std)

In the case that the 95% UCL reference displays a "1" indicating that the sample size was too small to calculate a 95% UCL, the maximum detected concentration, if available, is provided. Zero concentration values represent compounds that were not detected.

SOIL TO OUTDOOR AIR
SOIL - (0-15 feet)
SOUTHWEST PROPERTIES, WELLS G&H SUPERFUND SITE, OPERABLE UNIT 2
Aberjona Property

Notes:

Reference: *User's Guide for the Johnson and Ettinger (1991) Model for Subsurface Vapor Intrusion into Buildings* , USEPA, September 1997.

(1) Assumed equivalent to D_i^{eff} of soil layer i in contact with the floor

(2) For screening, assume a trench 4 ft deep, 3 ft wide, and 30 ft long.

(3) Depth to water table minus depth to bottom of floor must be > thickness of capillary fringe, which is based on the soil type (typ. around 30 cm). Use 400 cm for screening purposes.

(4) $D_T^{eff} = L_T / (L_T / D_v^{eff})$

(5) $Q_{soil} = (2*\pi*\Delta P*k_v*X_{crack}) / (\mu_{TS}*\ln(2*Z_{crack}/r_{crack}))$

(6) $\alpha = [(D_T^{eff}*A_B/(Q_{building}*L_T))*EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))]/[EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))+(D_T^{eff}*A_B/(Q_{building}*L_T))+(D_T^{eff}*A_B/(Q_{soil}*L_T))*(EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))-1)]$

(7) A function of the ratio T_B/T_C:

T_B/T_C	n
<0.57	0.30
0.57-0.71	$0.74(T_B/T_C)-0.116$
>0.71	0.41

(8) $\Delta H_{v,TS} = \Delta H_{v,B}*[(1-T_S/T_C)/(1-T_B/T_C)]^n$

(9) $H_{TS} = EXP[-\Delta H_{v,TS}/R_c*(1/T_S-1/T_R)]*H_R$

(10) Refer to 12 SCS soil types - use SC for screening.

(11) Refer to 12 SCS soil types - use SCL for screening.

(12) $L_{cz} = 0.15 / (0.2 * D_{cz})$

(13) $D_v^{eff} = D_a*(\theta_{a,v}^{3.33}/n_v^2)+(D_w/H'_{TS})(\theta_{w,v}^{3.33}/n_v^2)$

(14) $D_{cz}^{eff} = D_a*(\theta_{a,cz}^{3.33}/n_{cz}^2)+(D_w/H'_{TS})(\theta_{w,cz}^{3.33}/n_{cz}^2)$

(15) $\theta_{w,cz} = \theta_{r,cz}+((\theta_{s,cz}-\theta_{r,cz})/(2^{Mcz}))$, where the value 2 in the formula is used for screening, but may be refined based on soil parameters (see USEPA, 1999).

(16) $\mu_w = \mu_{w,10} * (T'_S / 283.15)^{0.5}$

(17) $k_{i,v} = K_{s,v} * 1/Conv02 * \mu_w / (\rho_w * g)$

(18) $S_{te} = (\theta_{w,v} - \theta_{r,v}) / (n_v - \theta_{r,v})$

(19) $k_{rg} = (1 - S_{te})^{0.5} * (1-S_{te}^{1/Mv})^{2Mv}$

(20) $k_v = k_{i,v} * k_{rg}$; note that the model is very sensitive to this parameter and if site-specific values are available, they should be used.

(21) $C_{source} = H'_{TS} * C_R * Conv01 * \rho_b / (\theta_{w,v} + K_d * \rho_b + H'_{TS} * \theta_{a,v}) * Conv02$

(22) For screening, assume a trench 4 ft deep, 3 ft wide, 30 ft long and an air exchange rate of 60/hr. The air exchange rate is based on the assumption that the wind speed in the trench is a small fraction of the ground wind speed and that it could take up to 1 minute for a contaminant to be cleared from the trench air space.

Whitney Property

Notes:

Reference: *User's Guide for the Johnson and Ettinger (1991) Model for Subsurface Vapor Intrusion into Buildings* , USEPA, September 1997.

(1) Assumed equivalent to D_i^{eff} of soil layer i in contact with the floor

(2) For screening, assume a trench 4 ft deep, 3 ft wide, and 30 ft long.

(3) Depth to water table minus depth to bottom of floor must be > thickness of capillary fringe, which is based on the soil type (typ. around 30 cm). Use 400 cm for screening purposes.

(4) $D_T^{eff} = L_T / (L_T / D_v^{eff})$

(5) $Q_{soil} = (2*\pi*\Delta P*k_v*X_{crack}) / (\mu_{TS}*\ln(2*Z_{crack}/r_{crack}))$

(6) $\alpha = [(D_T^{eff}*A_B/(Q_{building}*L_T))*EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))]/[EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))+(D_T^{eff}*A_B/(Q_{building}*L_T))+(D_T^{eff}*A_B/(Q_{soil}*L_T))*(EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))-1)]$

(7) A function of the ratio T_B/T_C:

T_B/T_C	n
<0.57	0.30
0.57-0.71	$0.74(T_B/T_C)-0.116$
>0.71	0.41

(8) $\Delta H_{v,TS} = \Delta H_{v,B}*[(1-T_S/T_C)/(1-T_B/T_C)]^n$

(9) $H_{TS} = EXP[-\Delta H_{v,TS}/R_v*(1/T_S-1/T_R)]*H_R$

(10) Refer to 12 SCS soil types - use SC for screening.

(11) Refer to 12 SCS soil types - use SCL for screening.

(12) $L_{cz} = 0.15 / (0.2 * D_{cz})$

(13) $D_v^{eff} = D_a*(\theta_{a,v}^{3.33}/n_v^2)+(D_w/H'_{TS})(\theta_{w,v}^{3.33}/n_v^2)$

(14) $D_{cz}^{eff} = D_a*(\theta_{a,cz}^{3.33}/n_{cz}^2)+(D_w/H'_{TS})(\theta_{w,cz}^{3.33}/n_{cz}^2)$

(15) $\theta_{w,cz} = \theta_{r,cz}+((\theta_{s,cz}-\theta_{r,cz})/(2^{Mcz}))$, where the value 2 in the formula is used for screening, but may be refined based on soil parameters (see USEPA, 1999).

(16) $\mu_w = \mu_{w-10} * (T'_S / 283.15)^{0.5}$

(17) $k_{i,v} = K_{s,v} * 1/Conv02 * \mu_w / (\rho_w * g)$

(18) $S_{te} = (\theta_{w,v} - \theta_{r,v}) / (n_v - \theta_{r,v})$

(19) $k_{rg} = (1 - S_{te})^{0.5} * (1-S_{te}^{1/Mv})^{2Mv}$

(20) $k_v = k_{i,v} * k_{rg}$; note that the model is very sensitive to this parameter and if site-specific values are available, they should be used.

(21) $C_{source} = H'_{TS} * C_R * Conv01 * \rho_b / (\theta_{w,v} + K_d * \rho_b + H'_{TS} * \theta_{a,v}) * Conv02$

(22) For screening, assume a trench 4 ft deep, 3 ft wide, 30 ft long and an air exchange rate of 60/hr. The air exchange rate is based on the assumption that the wind speed in the trench is a small fraction of the ground wind speed and that it could take up to 1 minute for a contaminant to be cleared from the trench air space.

APPENDIX B.3, TABLE B.3.3 (continued)
SOIL TO OUTDOOR AIR
SOIL - (0-15 feet)
SOUTHWEST PROPERTIES, WELLS G&H SUPERFUND SITE, OPERABLE UNIT 2
Murphy Property

Notes:

Reference: *User's Guide for the Johnson and Ettinger (1991) Model for Subsurface Vapor Intrusion into Buildings* , USEPA, September 1997.

(1) Assumed equivalent to D_i^{eff} of soil layer i in contact with the floor

(2) For screening, assume a trench 4 ft deep, 3 ft wide, and 30 ft long.

(3) Depth to water table minus depth to bottom of floor must be > thickness of capillary fringe, which is based on the soil type (typ. around 30 cm). Use 400 cm for screening purposes.

(4) $D_T^{eff} = L_T / (L_T / D_v^{eff})$

(5) $Q_{soil} = (2*\pi*\Delta P*k_v*X_{crack}) / (\mu_{TS}*\ln(2*Z_{crack}/r_{crack}))$

(6) $\alpha = [(D_T^{eff}*A_B/(Q_{building}*L_T))*EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))]/[EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))+(D_T^{eff}*A_B/(Q_{building}*L_T))+(D_T^{eff}*A_B/(Q_{soil}*L_T))*(EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))-1)]$

(7) A function of the ratio T_B/T_C:

T_B/T_C	n
<0.57	0.30
0.57-0.71	$0.74(T_B/T_C)-0.116$
>0.71	0.41

(8) $\Delta H_{v,TS} = \Delta H_{v,B}*[(1-T_S/T_C)/(1-T_B/T_C)]^n$

(9) $H_{TS} = EXP[-\Delta H_{w,TS}/R_c*(1/T_S-1/T_R)]*H_R$

(10) Refer to 12 SCS soil types - use SC for screening.

(11) Refer to 12 SCS soil types - use SCL for screening.

(12) $L_{cz} = 0.15 / (0.2 * D_{cz})$

(13) $D_v^{eff} = D_a*(\theta_{a,v}^{3.33}/n_v^2)+(D_w/H'_{TS})(\theta_{w,v}^{3.33}/n_v^2)$

(14) $D_{cz}^{eff} = D_a*(\theta_{a,cz}^{3.33}/n_{cz}^2)+(D_w/H'_{TS})(\theta_{w,cz}^{3.33}/n_{cz}^2)$

(15) $\theta_{w,cz} = \theta_{r,cz}+((\theta_{s,cz}-\theta_{r,cz})/(2^{Mcz}))$, where the value 2 in the formula is used for screening, but may be refined based on soil parameters (see USEPA, 1999).

(16) $\mu_w = \mu_{w-10} * (T'_S / 283.15)^{0.5}$

(17) $k_{i,v} = K_{s,v} * 1/Conv02 * \mu_w / (\rho_w * g)$

(18) $S_{te} = (\theta_{w,v} - \theta_{r,v}) / (n_v - \theta_{r,v})$

(19) $k_{rg} = (1 - S_{te})^{0.5} * (1-S_{te}^{1/Mv})^{2Mv}$

(20) $k_v = k_{i,v} * k_{rg}$; note that the model is very sensitive to this parameter and if site-specific values are available, they should be used.

(21) $C_{source} = H'_{TS} * C_R * Conv01 * \rho_b / (\theta_{w,v} + K_d * \rho_b + H'_{TS} * \theta_{a,v}) * Conv02$

(22) For screening, assume a trench 4 ft deep, 3 ft wide, 30 ft long and an air exchange rate of 60/hr. The air exchange rate is based on the assumption that the wind speed in the trench is a small fraction of the ground wind speed and that it could take up to 1 minute for a contaminant to be cleared from the trench air space.

APPENDIX B.3, TABLE B.3.4 (continued)
GROUNDWATER TO OUTDOOR AIR
SHALLOW GROUNDWATER - COMBINED ON-SITE
SOUTHWEST PROPERTIES, WELLS G&H SUPERFUND SITE, OPERABLE UNIT 2

Notes:

Reference: *User's Guide for the Johnson and Ettinger (1991) Model for Subsurface Vapor Intrusion into Buildings* , USEPA, September 1997.

(1) Assumed equivalent to D_i^{eff} of soil layer i in contact with the floor

(2) For screening, assume a trench 4 ft deep, 3 ft wide, and 30 ft long.

(3) Depth to water table minus depth to bottom of floor must be > thickness of capillary fringe, which is based on the soil type (typ. around 30 cm). Use 121 cm for screening purposes.

(4) $D_T^{eff} = L_T / (((L_{WT} - L_{cz} - L_F) / D_v^{eff}) + (L_{cz} / D_{cz}^{eff}))$

(5) $Q_{soil} = \Delta P * k_v * L_{soil}) / \mu_{TS}$; not from above reference

(6) $\alpha = [D_T^{eff} * A_B / (Q_{trench} * L_T)] / [(D_T^{eff} * A_B / (Q_{soil} * L_T)) + 1]$; assumes no resistance (Peclet number is infinite)

(7) A function of the ratio T_B/T_C:

T_B/T_C	n
<0.57	0.30
0.57-0.71	$0.74(T_B/T_C)-0.116$
>0.71	0.41

(8) $\Delta H_{v,TS} = \Delta H_{v,B} * [(1-T_S/T_C)/(1-T_B/T_C)]^n$

(9) $H_{TS} = EXP[-\Delta H_{v,TS}/R_C * (1/T_S - 1/T_R)] * H_R$

(10) Refer to 12 SCS soil types - use SC for screening.

(11) Refer to 12 SCS soil types - use SCL for screening.

(12) $L_{cz} = 0.15 / (0.2 * D_{cz})$

(13) $D_v^{eff} = D_a * (\theta_{a,v}^{3.33}/n_v^2) + (D_w/H'_{TS})(\theta_{w,v}^{3.33}/n_v^2)$

(14) $D_{cz}^{eff} = D_a * (\theta_{a,cz}^{3.33}/n_{cz}^2) + (D_w/H'_{TS})(\theta_{w,cz}^{3.33}/n_{cz}^2)$

(15) $\theta_{w,cz} = \theta_{r,cz} + ((\theta_{s,cz} - \theta_{r,cz})/(2^{Mcz}))$, where the value 2 in the formula is used for screening, but may be refined based on soil parameters (see USEPA, 1999).

(16) $\mu_w = \mu_{w-10} * (T'_S / 283.15)^{0.5}$

(17) $k_{i,v} = K_{s,v} * 1/Conv02 * \mu_w / (\rho_w * g)$

(18) $S_{te} = (\theta_{w,v} - \theta_{r,v}) / (n_v - \theta_{r,v})$

(19) $k_{rg} = (1 - S_{te})^{0.5} * (1 - S_{te}^{1/Mv})^{2Mv}$

(20) $k_v = k_{i,v} * k_{rg}$; note that the model is very sensitive to this parameter and if site-specific values are available, they should be used.

(21) For screening, assume a trench 4 ft deep, 3 ft wide, 30 ft long and an air exchange rate of 60/hr. The air exchange rate is based on the assumption that the wind speed in the trench is a small fraction of the ground wind speed and that it could take up to 1 minute for a contaminant to be cleared from the trench air space.

Notes:

Reference: *User's Guide for the Johnson and Ettinger (1991) Model for Subsurface Vapor Intrusion into Buildings* , USEPA, September 1997.

(1) Assumed equivalent to D_i^{eff} of soil layer i in contact with the floor

(2) For screening, assume a trench 4 ft deep, 3 ft wide, and 30 ft long.

(3) Depth to water table minus depth to bottom of floor must be > thickness of capillary fringe, which is based on the soil type (typ. around 30 cm). Use 121 cm for screening purposes.

(4) $D_T^{eff} = L_T / (((L_{WT} - L_{cz} - L_F) / D_v^{eff}) + (L_{cz} / D_{cz}^{eff}))$

(5) $Q_{soil} = \Delta P * k_v * L_{soil}) / \mu_{TS}$; not from above reference

(6) $\alpha = [D_T^{eff} * A_B / (Q_{trench} * L_T)] / [(D_T^{eff} * A_B / (Q_{soil} * L_T)) + 1]$; assumes no resistance (Peclet number is infinite)

(7) A function of the ratio T_B/T_C:

T_B/T_C	n
<0.57	0.30
0.57-0.71	$0.74(T_B/T_C)-0.116$
>0.71	0.41

(8) $\Delta H_{v,TS} = \Delta H_{v,B} * [(1-T_S/T_C)/(1-T_B/T_C)]^n$

(9) $H_{TS} = EXP[-\Delta H_{v,TS}/R_c * (1/T_S - 1/T_R)] * H_R$

(10) Refer to 12 SCS soil types - use SC for screening.

(11) Refer to 12 SCS soil types - use SCL for screening.

(12) $L_{cz} = 0.15 / (0.2 * D_{cz})$

(13) $D_v^{eff} = D_a * (\theta_{a,v}^{3.33} / n_v^2) + (D_w / H'_{TS}) (\theta_{w,v}^{3.33} / n_v^2)$

(14) $D_{cz}^{eff} = D_a * (\theta_{a,cz}^{3.33} / n_{Cz}^2) + (D_w / H'_{TS}) (\theta_{w,cz}^{3.33} / n_{cz}^2)$

(15) $\theta_{w,cz} = \theta_{r,cz} + ((\theta_{s,cz} - \theta_{r,cz}) / (2^{Mcz}))$, where the value 2 in the formula is used for screening, but may be refined based on soil parameters (see USEPA, 1999).

(16) $\mu_w = \mu_{w-10} * (T'_S / 283.15)^{0.5}$

(17) $k_{i,v} = K_{s,v} * 1/Conv02 * \mu_w / (\rho_w * g)$

(18) $S_{te} = (\theta_{w,v} - \theta_{r,v}) / (n_v - \theta_{r,v})$

(19) $k_{rg} = (1 - S_{te})^{0.5} * (1 - S_{te}^{1/Mv})^{2Mv}$

(20) $k_v = k_{i,v} * k_{rg}$; note that the model is very sensitive to this parameter and if site-specific values are available, they should be used.

(21) For screening, assume a trench 4 ft deep, 3 ft wide, 30 ft long and an air exchange rate of 60/hr. The air exchange rate is based on the assumption that the wind speed in the trench is a small fraction of the ground wind speed and that it could take up to 1 minute for a contaminant to be cleared from the trench air space.

Notes:

Reference: *User's Guide for the Johnson and Ettinger (1991) Model for Subsurface Vapor Intrusion into Buildings* , USEPA, September 1997.

(1) Assumed equivalent to D_i^{eff} of soil layer i in contact with the floor

(2) For screening, assume a trench 4 ft deep, 3 ft wide, and 30 ft long.

(3) Depth to water table minus depth to bottom of floor must be > thickness of capillary fringe, which is based on the soil type (typ. around 30 cm). Use 400 cm for screening purposes.

(4) $D_T^{eff} = L_T / (L_T / D_v^{eff})$

(5) $Q_{soil} = (2*\pi*\Delta P*k_v*X_{crack}) / (\mu_{TS}*\ln(2*Z_{crack}/r_{crack}))$

(6) $\alpha = [(D_T^{eff}*A_B/(Q_{building}*L_T))*EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))]/[EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))+(D_T^{eff}*A_B/(Q_{building}*L_T))+(D_T^{eff}*A_B/(Q_{soil}*L_T))*(EXP(Q_{soil}*L_{crack}/(D^{crack}*A_{crack}))-1)]$

(7) A function of the ratio T_B/T_C:

T_B/T_C	n
<0.57	0.30
0.57-0.71	$0.74(T_B/T_C)-0.116$
>0.71	0.41

(8) $\Delta H_{v,TS} = \Delta H_{v,B}*[(1-T_S/T_C)/(1-T_B/T_C)]^n$

(9) $H_{TS} = EXP[-\Delta H_{v,TS}/R_c*(1/T_S-1/T_R)]*H_R$

(10) Refer to 12 SCS soil types - use SC for screening.

(11) Refer to 12 SCS soil types - use SCL for screening.

(12) $L_{cz} = 0.15 / (0.2 * D_{cz})$

(13) $D_v^{eff} = D_a*(\theta_{a,v}^{3.33}/n_v^2)+(D_w/H'_{TS})(\theta_{w,v}^{3.33}/n_v^2)$

(14) $D_{cz}^{eff} = D_a*(\theta_{a,cz}^{3.33}/n_{cz}^2)+(D_w/H'_{TS})(\theta_{w,cz}^{3.33}/n_{cz}^2)$

(15) $\theta_{w,cz} = \theta_{r,cz}+((\theta_{s,cz}-\theta_{r,cz})/(2^{Mcz}))$, where the value 2 in the formula is used for screening, but may be refined based on soil parameters (see USEPA, 1999).

(16) $\mu_w = \mu_{w-10} * (T'_S / 283.15)^{0.5}$

(17) $k_{i,v} = K_{s,v} * 1/Conv02 * \mu_w / (\rho_w * g)$

(18) $S_{te} = (\theta_{w,v} - \theta_{r,v}) / (n_v - \theta_{r,v})$

(19) $k_{rg} = (1 - S_{te})^{0.5} * (1-S_{te}^{1/Mv})^{2Mv}$

(20) $k_v = k_{i,v} * k_{rg}$; note that the model is very sensitive to this parameter and if site-specific values are available, they should be used.

(21) $C_{source} = H'_{TS} * C_R * Conv01 * \rho_b / (\theta_{w,v} + K_d * \rho_b + H'_{TS} * \theta_{a,v}) * Conv02$

(22) For screening, assume a trench 4 ft deep, 3 ft wide, 30 ft long and an air exchange rate of 60/hr. The air exchange rate is based on the assumption that the wind speed in the trench is a small fraction of the ground wind speed and that it could take up to 1 minute for a contaminant to be cleared from the trench air space.

Appendix B.4

Dermal Appendix

B.4-1 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (ABERJONA PROPERTY): FUTURE CONSTRUCTION WORKER CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	125.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	25550	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

B.4-2 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (WHITNEY PROPERTY): FUTURE CONSTRUCTION WORKER CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	125.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	25550	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B-4.3 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (MURPHY PROPERTY): FUTURE CONSTRUCTION WORKER CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	125	days/yr
Exposure duration (years):	ED =	1	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70	kg
Averaging time (days):	AT =	25550	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.

B.4-4 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (ABERJONA PROPERTY): FUTURE CONSTRUCTION WORKER NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	125	days/yr
Exposure duration (years):	ED =	1	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70	kg
Averaging time (days):	AT =	365	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.

B.4-5 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (WHITNEY PROPERTY): FUTURE CONSTRUCTION WORKER NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	125.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	365	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-6 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (MURPHY PROPERTY): FUTURE CONSTRUCTION WORKER NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	125.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	365	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min) Q = 1135500.0 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-7 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (ABERJONA PROPERTY): FUTURE CONSTRUCTION WORKER CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	40.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	25550	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-8 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (WHITNEY PROPERTY): FUTURE CONSTRUCTION WORKER CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	40.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	25550	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-9 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (MURPHY PROPERTY): FUTURE CONSTRUCTION WORKER CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	40.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70	kg
Averaging time (days):	AT =	25550	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.

B.4-10 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (ABERJONA PROPERTY): FUTURE CONSTRUCTION WORKER NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	40.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	365	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

B.4-11 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (WHITNEY PROPERTY): FUTURE CONSTRUCTION WORKER NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	40.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	365	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-12 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (MURPHY PROPERTY): FUTURE CONSTRUCTION WORKER NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	3300	cm2
Event time (hr/event):	t_event =	8.00	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	40.0	days/yr
Exposure duration (years):	ED =	1.0	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70.0	kg
Averaging time (days):	AT =	365	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	50	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-13 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (COMBINED): FUTURE ADULT RESIDENT CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	18000	cm2
Event time (hr/event):	t_event =	0.58	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	350	days/yr
Exposure duration (years):	ED =	24	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70	kg
Averaging time (days):	AT =	25500	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	2000	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Max Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-14 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (COMBINED): FUTURE ADULT RESIDENT NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	18000	cm2
Event time (hr/event):	t_event =	0.58	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	350	days/yr
Exposure duration (years):	ED =	24	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70	kg
Averaging time (days):	AT =	8760	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	2000	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Max Conc (mg/cm3	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-15 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (COMBINED): FUTURE ADULT RESIDENT CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	18000	cm2
Event time (hr/event):	t_event =	0.25	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	350	days/yr
Exposure duration (years):	ED =	7	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	70	kg
Averaging time (days):	AT =	25550	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	1400	= L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	'85 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.

3.4-16 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (COMBINED): FUTURE ADULT RESIDENT NON-CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3): Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	18000	cm2
Event time (hr/event):	t_event =	0.25	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	350	days/yr
Exposure duration (years): for carcinogenic effects, ED = 30 years (used in this spreadsheet) for noncarcinogenic effects, ED = 9 years	ED =	7	years
Body weight (kg):	BW =	70	kg
Averaging time (days): for carcinogenic effects, AT=70 years (25,550 days) for noncarcinogenic effects, AT=ED (in days)	AT =	2555	days
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	1400	= L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min) Q = 1135500.0 '85 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.

B.4-17 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (COMBINED): FUTURE CHILD RESIDENT CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3):			
Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	6600	cm2
Event time (hr/event):	t_event =	1	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	350	days/yr
Exposure duration (years):	ED =	6	years
for carcinogenic effects, ED = 30 years (used in this spreadsheet)			
for noncarcinogenic effects, ED = 9 years			
Body weight (kg):	BW =	15	kg
Averaging time (days):	AT =	25500	days
for carcinogenic effects, AT=70 years (25,550 days)			
for noncarcinogenic effects, AT=ED (in days)			
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	1500	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data
as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Max Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-18 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (COMBINED): FUTURE CHILD RESIDENT NONCANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for
carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3): Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	6600	cm2
Event time (hr/event):	t_event =	1	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	350	days/yr
Exposure duration (years): for carcinogenic effects, ED = 30 years (used in this spreadsheet) for noncarcinogenic effects, ED = 9 years	ED =	6	years
Body weight (kg):	BW =	15	kg
Averaging time (days): for carcinogenic effects, AT=70 years (25,550 days) for noncarcinogenic effects, AT=ED (in days)	AT =	2190	days
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	1500	(cm3/day = L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	(assumed 100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	(cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Max Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-19 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (COMBINED): FUTURE CHILD RESIDENT CANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3): Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	6600	cm2
Event time (hr/event):	t_event =	0.33	hr/event
Event frequency (events/day):	EV =	1	event/day
Exposure frequency (days/year):	EF =	350	days/yr
Exposure duration (years): for carcinogenic effects, ED = 30 years (used in this spreadsheet) for noncarcinogenic effects, ED = 9 years	ED =	2	years
Body weight (kg):	BW =	15	kg
Averaging time (days): for carcinogenic effects, AT=70 years (25,550 days) for noncarcinogenic effects, AT=ED (in days)	AT =	25550	days
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	870	= L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	'85 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Mean Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-20 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (COMBINED): FUTURE CHILD RESIDENT NONCANCER RISK

FOR ORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Organic Chemicals from Aqueous Media (latest version 04/01)

Enter the Following Exposure Conditions: for site specific conditions, change values in Cells I8-I18
The default exposure conditions used in this spreadsheet assume exposure duration for carcinogenic effects of chemicals in water through showering

Concentration (mg/L*L/1000 cm3): Input site specific concentrations in Column marked "Conc"			
Area exposed (cm2):	SA =	6600	cm2
Event time (hr/event):	t_event =	0.33	hr/event
Event frequency (events/day):	EV =	1.0	event/day
Exposure frequency (days/year):	EF =	350.0	days/yr
Exposure duration (years): for carcinogenic effects, ED = 30 years (used in this spreadsheet) for noncarcinogenic effects, ED = 9 years	ED =	2.0	years
Body weight (kg):	BW =	15.0	kg
Averaging time (days): for carcinogenic effects, AT=70 years (25,550 days) for noncarcinogenic effects, AT=ED (in days)	AT =	730	days
Skin thickness (assumed to be 10 um):	lsc =	1.00E-03	cm

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV	IR =	870	= L/day * 1000 cm3/L)
Drinking (mg/day) = Conc * IR * ABSIG	ABSGI =	1.0	100% GI absorption)

IR: Ingestion rate of drinking water
ABSIG: Absorption fraction in GI tract

Refer to Appendix A for equations to evaluate DA_event and DAD

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/min)	Q =	1135500.0	'85 gal/l * 60 min/hr *1000 cm3/hr)

(*): outside of the Effective Prediction Domain (EPD) determined by the Flynn's measured Kp data as evaluated using MLAB (Civilized Software, Bethesda, MD)
95% LCI and UCI are evaluated using STATA

(**): halogenated chemicals.
Note:

CHEMICAL	CAS No.	MWT	logKow	Kp 95% LCI	Kp (cm/hr) predicted	Kp (cm/hr) measured	Kp 95% UCI	Special Chemicals (*) or (**)	Derm/ Drink	Chem Assess	Derm/ Total Dose	B	tau (hr)	t_star (hr)	FA	Mean Conc (mg/cm3)	Kp used in DA_event	DA_event (mg/cm2-evt)	DAD (mg/kg-day)

B.4-21 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (ABERJONA PROPERTY): FUTURE ADULT CONSTRUCTION WORKER CANCER RISI

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	3300	cm2
t_event =	8.00	hr/event (35 minutes/event)
EV =	1	event/day
EF =	125	days/yr
ED =	1	years
BW =	70	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water IR = 50 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/ Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-22 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (WHITNEY PROPERTY): FUTURE ADULT CONSTRUCTION WORKER CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	3300	cm2
t_event =	8.00	hr/event (35 minutes/event)
EV =	1	event/day
EF =	125	days/yr
ED =	1	years
BW =	70	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water IR = 50 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/ Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-23 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (MURPHY PROPERTY): FUTURE ADULT CONSTRUCTION WORKER CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	3300	cm2
t_event =	8	hr/event
EV =	1	event/day
EF =	125	days/yr
ED =	1	years
BW =	70	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water IR = 50 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/ Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-29 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (MURPHY PROPERTY): FUTURE ADULT CONSTRUCTION WORKER CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	3300	cm2
t_event =	8	hr/event
EV =	1	event/day
EF =	40	days/yr
ED =	1	years
BW =	70	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 50 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/r — Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

	CHEMICAL	Kp (cm/hr)	Source of Kp (exp or default)	Conc (mg/cm3)	DA_event (mg/cm2-event)	DAD (mg/kg-day)	ABSGI (chemical specific)	Screening	Chemicals to be assessed	Derm/ Total Dose

B.4-30 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (ABERJONA PROPERTY): FUTURE ADULT CONSTRUCTION WORKER NON-CANCER F

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	3300	cm2
t_event =	8.00	hr/event (35 minutes/event)
EV =	1	event/day
EF =	40	days/yr
ED =	1	years
BW =	70	kg
AT =	365	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 50 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/r — Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-33 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (COMBINED): FUTURE ADULT RESIDENT CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	18000	cm2
t_event =	0.58	hr/event
EV =	1	event/day
EF =	350	days/yr
ED =	24	years
BW =	70	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 1500 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/ Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-35 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (COMBINED): FUTURE ADULT RESIDENT CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	18000	cm2
t_event =	0.25	hr/event
EV =	1	event/day
EF =	350	days/yr
ED =	7	years
BW =	70	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinki IR = 1400 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fractio Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

	CHEMICAL	Kp (cm/hr)	Source of Kp (exp or default)	Conc (mg/cm3)	DA_event (mg/cm2-event)	DAD (mg/kg-day)	ABSGI (chemical specific)	Screening	Chemicals to be assessed	Derm/ Total Dose

B.4-36 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - GROUNDWATER (COMBINED): FUTURE ADULT RESIDENT NON-CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	18000	cm2
t_event =	0.25	hr/event
EV =	1	event/day
EF =	350	days/yr
ED =	7	years
BW =	70	kg
AT =	2555	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinki IR = 1400 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fractio Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-37 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - GROUNDWATER (COMBINED): FUTURE CHILD RESIDENT CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	6600	cm2
t_event =	1	hr/event
EV =	1	event/day
EF =	350	days/yr
ED =	6	years
BW =	15	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 1500 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/ Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-41 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - SURFACE WATER: CURRENT OLDER CHILD TRESPASSER CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	4500	cm2
t_event =	1	hr/event
EV =	1	event/day
EF =	26	days/yr
ED =	6	years
BW =	57	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 1500 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/l — Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

B.4-43 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - SURFACE WATER: CURRENT OLDER CHILD TRESPASSER CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	4500	cm2
t_event =	0.5	hr/event
EV =	1	event/day
EF =	26	days/yr
ED =	2	years
BW =	57	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 1500 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/l — Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

	CHEMICAL	Kp (cm/hr)	Source of Kp (exp or default)	Conc (mg/cm3)	DA_event (mg/cm2-event)	DAD (mg/kg-day)	ABSGI (chemical specific)	Screening	Chemicals to be assessed	Derm/ Total Dose

B.4-44 DERMAL ABSORPTION CALCULATION FOR CT EXPOSURE - SURFACE WATER: FUTURE OLDER CHILD TRESPASSER NON-CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	4500	cm2
t_event =	0.5	hr/event
EV =	1	event/day
EF =	26	days/yr
ED =	2	years
BW =	57	kg
AT =	730	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 1500 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/l — Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

ED =	7	years
BW =	70	kg
AT =	2550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 1400 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/l — Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

	CHEMICAL	Kp (cm/hr)	Source of Kp (exp or default)	Conc (mg/cm3)	DA_event (mg/cm2-event)	DAD (mg/kg-day)	ABSGI (chemical specific)	Screening	Chemicals to be assessed	Derm/ Total Dose

B.4-53 DERMAL ABSORPTION CALCULATION FOR RME EXPOSURE - SURFACE WATER: FUTURE CHILD RECREATIONAL CANCER RISK

FOR INORGANIC CHEMICALS IN WATER (latest version 04/01)

Worksheet to Calculate Dermal Absorption of Inorganic Chemicals from Aqueous Media

Enter the Following Exposure Conditions: for site specific conditions, change values for A through AT (Given are default values from Table 8-6)

SA=	2800	cm2
t_event =	1	hr/event
EV =	1	event/day
EF =	78	days/yr
ED =	6	years
BW =	15	kg
AT =	25550	days

Default conditions for screening purposes:

Compare Dermal to Drinking: Adults showering for 35 minutes/day, compared to drinking 2L water/day

Dermal (mg/day) = DA_event * A * EV
Drinking (mg/day) = Conc * IR * ABSIG

IR: Ingestion rate of drinking water — IR = 1500 (cm3/day = L/day * 1000 cm3/L)
ABSIG: Absorption fraction in GI tract — Chemical specific
Condition for screening: "Y" when Dermal is 10% of Drinking

Compare Dermal to Total dose exposed during adult showering assuming 5 gal/min of water flow rate

Total dose (mg/day) = Q * T_event * EV

Q: Shower flow rate (5-15 gal/min; here using 5 gal/l — Q = 1135500 (cm3/hr = gal/min * 3.785 gal/l * 60 min/hr *1000 cm3/hr)

Refer to Appendix A for equations to evaluate DA_event and DAD

217	Note: Data have multiple DLs - Use of KM Method is recommended						Number treated as Non-Detect					8
218	For all methods (except KM, DL/2, and ROS Methods),						Number treated as Detected					0
219	Observations < Largest ND are treated as NDs						Single DL Non-Detect Percentage					100.00%
220												
221	**Warning: Data set has only 2 Distinct Detected Values.**											
222	**This may not be adequate enough to compute meaningful and reliable test statistics and estimates.**											
223	**The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).**											
224												
225	**Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.**											
226												
227	**The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.**											
228	**Those methods will return a 'N/A' value on your output display!**											
229												
230	**It is necessary to have 4 or more Distinct Values for bootstrap methods.**											
231	**However, results obtained using 4 to 9 distinct values may not be reliable.**											
232	**It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.**

TEQ (no 170/193/180) Humans

General Statistics

Number of Valid Observations	7	Number of Distinct Observations	7
Number of Missing Values	9		

Raw Statistics		Log-transformed Statistics	
Minimum	1.221E-05	Minimum of Log Data	-11.31
Maximum	0.0001906	Maximum of Log Data	-8.565
Mean	8.88E-05	Mean of log Data	-9.781
Geometric Mean	5.653E-05	SD of log Data	1.151
Median	9.166E-05		
SD	7.36E-05		
Std. Error of Mean	2.782E-05		
Coefficient of Variation	N/A		
Skewness	0.4		

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!

If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 7 Values in this data

Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

3001	**Nonparametric Distribution Free UCL Statistics**												
3002	**Data appear to follow a Discernible Distribution at 5% Significance Level**												
3003													
3004	**Nonparametric Distribution Free UCLs**												
3005				95% CLT UCL		8.281	95% Jackknife UCL					8.869	
3006				95% Standard Bootstrap UCL		8.166	95% Bootstrap-t UCL					31.06	
3007				95% Hall's Bootstrap UCL		29.32	95% Percentile Bootstrap UCL					8.986	
3008				95% BCA Bootstrap UCL		11.75							
3009				90% Chebyshev(Mean, Sd) UCL		11.99	95% Chebyshev(Mean, Sd) UCL					15.71	
3010				97.5% Chebyshev(Mean, Sd) UCL		20.88	99% Chebyshev(Mean, Sd) UCL					31.02	
3011													
3012	**Suggested UCL to Use**												
3013				95% Adjusted Gamma UCL		21.05							
3014													
3015	Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.												
3016	These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002)												
3017	and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.												
3018	For additional insight the user may want to consult a statistician.												
3019

Table B.5.3 - Shallow Groundwater - Whitney
Well G&H Superfund Site, Operable Unit 2
Woburn, Massachusetts

	A	B	C	D	E	F	G	H	I	J	K	L	M
3022	**General Statistics**												
3023	Total Number of Observations					9	Number of Distinct Observations					8	
3024							Number of Missing Observations					1	
3025	Number of Detects					7	Number of Non-Detects					2	
3026	Number of Distinct Detects					7	Number of Distinct Non-Detects					1	
3027	Minimum Detect					0.0033	Minimum Non-Detect					0.0012	
3028	Maximum Detect					0.56	Maximum Non-Detect					0.0012	
3029	Variance Detects					0.0427	Percent Non-Detects					22.22%	
3030	Mean Detects					0.103	SD Detects					0.207	
3031	Median Detects					0.0053	CV Detects					2.006	
3032	Skewness Detects					2.4	Kurtosis Detects					5.852	
3033	Mean of Logged Detects					-4.098	SD of Logged Detects					2.003	
3034													
3035	**Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use**												
3036	**guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.**												
3037	**For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).**												
3038	**Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0**												
3039													
3040	**Normal GOF Test on Detects Only**												
3041	Shapiro Wilk Test Statistic					0.582	**Shapiro Wilk GOF Test**						
3042	5% Shapiro Wilk Critical Value					0.803	Detected Data Not Normal at 5% Significance Level						
3043	Lilliefors Test Statistic					0.381	**Lilliefors GOF Test**						
3044	5% Lilliefors Critical Value					0.335	Detected Data Not Normal at 5% Significance Level						
3045	**Detected Data Not Normal at 5% Significance Level**												
3046
