US EPA ARCHIVE DOCUMENT

I Executive Summary

On October 17, 2008, the Florida Department of Environmental Protection (FDEP) submitted its 2008 update to its section 303(d) list for Group One and Group Five watersheds to the Environmental Protection Agency (EPA) for review. On August 17, 2009, FDEP amended that submission to include its Group Two Update for EPA review. The combined section 303(d) update submission for Group One, Two, and Five basins is referred to in this document as the 2009 Update. Florida's 2009 submittal is an update to the state's most recently approved section 303(d) list, approved by EPA on June 11, 2003. That submittal updated, for Group One basins, the list approved by EPA on November 24, 1998 (the 1998 list). Following its review of Florida's 2009 Update, EPA is approving that list in part and is adding waters to the state's section 303(d) list. This document summarizes EPA's review and the basis for the Agency's decision.

Section 303(d)(1) of the Clean Water Act (CWA or Act) directs states to identify those waters within their jurisdictions for which effluent limitations required by sections 301(b)(1)(A) and (B) of the Act are not stringent enough to implement any applicable water quality standard (referred to as water quality limited segments, as defined in 40 C.F.R. § 130.7), and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. The section 303(d) listing requirement applies to water quality limited segments impaired by pollutant loadings from both point and/or nonpoint sources. After a state submits its section 303(d) list to EPA, the Agency is required to approve or disapprove that list.

FDEP assessed waters for the 2009 Updates pursuant to its approved water quality standards, including the water quality standards contained in the Impaired Waters Rule, commonly referred to as the IWR. Through the Florida Watershed Restoration Act, the state legislature directed the Florida Department of Environmental Protection (FDEP) to develop and adopt by rule a methodology to identify waters that do not meet the State's approved water quality standards and, therefore, are required to be included on section 303(d) lists. The IWR was adopted on April 26, 2001, and amended in 2006 and 2007. See Identification of Impaired Surface Waters, Chapter 62-303, Florida Administrative Code (F.A.C.). FDEP submitted the IWR to EPA for review pursuant to section 303(c) of the Clean Water Act in September 2007. EPA determined certain provisions of the IWR to be new or revised water quality standards[1] and

[1] Determination Upon Review of Amended Florida Administrative Code Chapter 62-3-3, Identification of Impaired Waters. United States Environmental Protection Agency, February 19, 2008 (2008 IWR Determination) .

approved those standards on February 19, 2008.[2] EPA determined that other provisions of the IWR are not water quality standards and therefore did not review these provisions under CWA section 303(c). EPA views these other provisions as part of FDEP's section 303(d) listing methodologies. Consistent with EPA's implementing regulations and guidance, EPA considered these methodologies, to the extent that they reflect a reasonable interpretation of Florida's water quality standards and sound science, when it reviewed FDEP's section 303(d) list submittals.

Waters that are not attaining Florida's water quality standards are identified by FDEP as water quality limited segments and submitted to EPA as an update to Florida's then-current section 303(d) list. The water quality standards and listing methodologies contained in the IWR establish specific protocols and thresholds for assessing waterbodies, in addition to data sufficiency and data quality requirements. The IWR contains procedures for assessing both aquatic life use support and human health use support. FDEP conducts these assessments based on Florida's rotating basin approach. Florida waters are divided into five basin groups, with each group representing approximately 20% of state watersheds. Each year, FDEP assesses waterbodies within one group of basins. Lists based on those basin assessments constitute updates to the state's then-current section 303(d) list. All five basin groups are assessed within a five year period. All waters which were included in Florida's approved 1998 section 303(d) list will remain on Florida's section 303(d) list, unless FDEP removes a waterbody and EPA approves that removal.

FDEP submitted a 2002 update to EPA for review, assessing Group One waterbodies. EPA's decision partially approving that update and partially disapproving and adding waters to Florida's section 303(d) list was challenged in court. While that litigation, and related litigation challenging the IWR, were pending, FDEP developed basin group assessment reports but did not submit section 303(d) lists to EPA. In October 2008, FDEP submitted Groups One and Five to EPA for review. On August 17, 2009, FDEP submitted Group Two assessments, along with revised Group One and Five updates, to EPA for review. These three updates comprise the 2009 Update.

FDEP's updated list submittal includes, among other things:

- Additional waterbodies in Groups One, Two and Five which FDEP determined to be water quality limited segments.

- Group One, Two and Five waterbodies included on Florida's previously approved 1998 section 303(d) list which were determined not to need TMDLs and were, therefore, removed from Florida's 303(d) list as submitted to EPA.

EPA reviewed FDEP's submittal to determine whether the 2009 Update appropriately assessed waters based on Florida's water quality standards, including those provisions of the IWR which have themselves been determined to be water quality standards and approved by

[2] Letter from James D, Giattina to Michael W. Sole. February 19, 2008 (2008 IWR Approval Letter).

US EPA ARCHIVE DOCUMENT

EPA pursuant to section 303(c) of the CWA. EPA further considered whether those provisions of the IWR which it determined to be listing methodologies reasonably identified water quality limited segments, considering the state's water quality standards.

Where EPA was unsure whether the methodology was a reasonable method for identifying water quality limited segments, the Region conducted further waterbody and data analysis. Where EPA determined that FDEP's application of the IWR did not properly implement Florida's approved water quality standards or EPA regulations, EPA addressed that inconsistency as part of this 303(d) list review process.

The Agency reviewed FDEP's waterbody assessments for all designated uses, based on Florida's water quality standards. The results of EPA's review demonstrate that FDEP's application of its listing methodology was very successful for identifying waters that are not meeting water quality standards. Through its data collection and assessment process, FDEP assessed water quality for over 4,000 waterbodies, which is a significant accomplishment.

EPA concluded that FDEP was largely successful in assessing the Group One, Two, and Five waterbodies for attainment of designated uses and water quality criteria, including aquatic life use support and water quality criteria for most naturally variable indicator pollutants, aquatic life use support for water quality criteria with a toxic effect, aquatic life use support and narrative water quality criteria for nutrient impairments, fish consumption use support, and use support for those pollutants with water quality criteria expressed as an annual average.

FDEP has an extensive monitoring network and data collection effort. Without the database compiled by FDEP, which contains over 9,000,000 data points for Groups One, Two, and Five waterbodies, much of the analysis conducted the State and by EPA would not have been possible.

Following EPA's decision to approve Florida's 2009 Update, the current section 303(d) list in the State of Florida contains:

	Approved 2003 Updated Section 303(d) List	(Appendix A)
(+)	Approved Groups One, Two, and Five FDEP additions	(Appendix B)
(+)	Groups One, Two, and Five EPA additions	(Appendix C)
(-)	Approved FDEP Groups One, Two, and Five delistings	(Appendix D)

The statutory and regulatory requirements relevant to section 303(d) lists, and EPA's review of Florida's compliance with each requirement, are described in detail below.

US EPA ARCHIVE DOCUMENT

II. Statutory and Regulatory Background

A. Identification of Water Quality Limited Segments (WQLSs) for Inclusion on the Section 303(d) list

Section 303(d)(1) of the Clean Water Act directs states to identify those waters within their jurisdictions for which effluent limitations required by section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard, and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. The section 303(d) listing requirement applies to waters impaired by point and/or nonpoint sources, pursuant to EPA's long-standing interpretation of section 303(d).

EPA regulations at 40 CFR 131.7(b)(1) provide that

> [e]ach State shall identify those water quality-limited segments still requiring TMDLs within its boundaries for which: (i) Technology-based effluent limitations required by sections 301(b), 306, 307, or other sections of the Act; (ii) More stringent effluent limitations (including prohibitions) required by either State or local authority preserved by section 510 of the Act, or Federal authority (law, regulation, or treaty); and (iii) Other pollution control requirements (e.g., best management practices) required by local, State, or Federal authority are not stringent enough to implement any water quality standards applicable to such waters.

EPA regulations at 40 CFR 130.2(j) define water quality limited segment as

> [a]ny segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by sections 301(b) and 306 of the Act.

"Water quality limited segment" may also be referred to as "WQLS," "impaired waterbodies," or "impairments" in this document.

B. Consideration of Existing and Readily Available Water Quality-Related Data and Information

In developing section 303(d) lists, states are required to assemble and evaluate all existing and readily available water quality-related data and information, including, at a minimum, considering existing and readily available data and information about the following categories of waters: (1) waters identified as partially meeting or not meeting designated uses, or as threatened, in the state's most recent section 305(b) report; (2) waters for which dilution calculations or predictive modeling indicate nonattainment of applicable standards; (3) waters for

US EPA ARCHIVE DOCUMENT

which water quality problems have been reported by governmental agencies, members of the public, or academic institutions; and (4) waters identified as impaired or threatened in any section 319 nonpoint assessment submitted to EPA. See 40 CFR 130.7(b)(5). In addition to these minimum categories, states are required to consider any other water quality-related data and information that is existing and readily available. EPA's *1991 Guidance for Water Quality-Based Decisions* describes categories of water quality-related data and information that may be existing and readily available. See Appendix C of *Guidance for Water Quality-Based Decisions: The TMDL Process*, EPA Office of Water, 1991 (EPA's 1991 Guidance). While states are required to evaluate all existing and readily available water quality-related data and information, states may reasonably decide to rely or not rely on particular data or information in determining whether to list particular waters.

In addition to requiring states to assemble and evaluate all existing and readily available water quality-related data and information, EPA regulations require states to include, as part of their submissions to EPA, documentation to support decisions to list or not list waters. See 40 CFR 130.7(b)(6). Such documentation includes, at a minimum, the following information: (1) a description of the methodology used to develop the list, (2) a description of the data and information used to identify waters, (3) a rationale for any decision to not use any existing and readily available data and information, and (4) any other reasonable information requested by the Region.

C. Priority Ranking

EPA regulations also codify and interpret the requirement in section 303(d)(1)(A) of the Act that states establish a priority ranking for listed waters. The regulations require states to prioritize waters on their section 303(d) lists for TMDL development and to identify those WQLSs targeted for TMDL development in the next two years. See 40 CFR 130.7(b)(4). In prioritizing and targeting waters, states must, at a minimum, take into account the severity of the pollution and the uses to be made of such waters. See section 303(d)(1)(A). As long as these factors are taken into account, the Act provides that states establish priorities. States may consider other factors relevant to prioritizing waters for TMDL development, including immediate programmatic needs; vulnerability of particular waters as aquatic habitats; recreational, economic, and aesthetic importance of particular waters; degree of public interest and support; and state or national policies and priorities. See 57 FR 33040, 33045 (July 24, 1992) and EPA's 1991 Guidance at 4.

III. Analysis of the Florida Department of Environmental Protection's Submission

In reviewing FDEP's 2009 Update, EPA first reviewed the listing methodology used by the State to develop the list update in light of Florida's approved water quality standards. EPA then reviewed the list of waters. This section describes FDEP's listing methodology and outlines EPA's evaluation of both that methodology and the list of water quality limited segments included in the 2009 Update. Where EPA was unsure whether the listing methodology identified

US EPA ARCHIVE DOCUMENT

all water quality limited segments for a given designated use or water quality criteria, EPA reviewed water quality data and information to determine whether any waterbodies should be added to the 303(d) list.

A. Florida's 2009 Update.

Florida submitted list updates for Groups One, Two and Five waterbodies for the 2009 Update. FDEP submitted its section 303(d) lists updates for Groups One and Five to EPA for review on October 17, 2008. FDEP submitted revised list updates for Groups One and Five and a list update for Group Two on August 17, 2009, including newly listed waterbodies and waterbodies proposed for delisting within those Groups. All other waterbodies included on Florida's approved 2003 section 303(d) list which were not delisted remain on the section 303(d) list.[3] Details of Florida's listing approach and EPA's review of the list are described below.

1. Florida's Water Quality Standards and Section 303(d) List Development

Section 303(d) of the Clean Water Act requires each State to identify and prioritize those waters where technology-based controls are inadequate to implement water quality standards:

> Each State shall identify those waters within its boundaries for which the effluent limitations required by section 1311(b)(1)(A) and section 1311(b)(1)(B) of this title are not stringent enough to implement any water quality standards applicable to such waters.

33 U.S.C. § 1313(d)(1)(A); see also 40 C.F.R. 130.7(b) (EPA's 303(d) listing regulations).

EPA's regulations expressly provide that "[f]or purposes of listing waters under § 130.7(b), the term 'water quality standard applicable to such waters' and 'applicable water quality standards' refer to those water quality standards established under section 303 of the Act, including numeric criteria, narrative criteria, water body uses, and antidegradation requirements." 40 C.F.R. 130.7(b)(3). EPA's review of state section 303(d) lists ensures that those lists identify water quality limited segments consistent with existing state standards.

Water quality criteria can be expressed either as narrative or numeric criteria. Numeric criteria typically establish either a maximum level or a range of levels of a pollutant which can be present in the waterbody while still attaining water quality standards. Narrative criteria typically describe a condition (i.e. no imbalance of flora or fauna) which must be met for the waterbody to meet water quality standards. Determining whether a waterbody is meeting water quality standards for a narrative criterion generally involves the identification of reference points against which the waterbody can be evaluated. In the context of listing, EPA considers a state's

[3] The 2003 EPA-approved section 303(d) list for the state of Florida is set out at Appendix L of EPA's 2003 Decision Document. That list contains all waters on the EPA approved 1998 section 303(d) list as updated by EPA's decision regarding FDEP's 2002 Group One Update.

US EPA ARCHIVE DOCUMENT

interpretation of its water quality standards, including how narrative criteria should be interpreted, when that interpretation is consistent with the underlying narrative criterion and is a reasonable translation of that criterion.

a. Florida's numeric water quality criteria

The primary numeric water quality criteria in Florida are detailed in the Table under 62-302.530 FAC (Table: Surface Water Quality Criteria). These criteria are expressed in a number of different ways that will be discussed in more detail below.

b. Florida's narrative water quality criteria

The primary narrative water quality criteria in Florida are set out below, with a summary of EPA's review of FDEP's methodology for these narrative criteria.

- Criteria: 62-302.530(47) FAC (Nuisance Species): Substances in concentrations which result in the dominance of nuisance species: none shall be present.

To implement this narrative standard, FDEP relies on Florida's water quality criterion for biological integrity. That criterion, set out in Rule 62-302.530(11) FAC, provides that biological integrity is to be measured by percent reduction of the Shannon Weaver Diversity Index. Florida's water quality standards also allow the biological integrity to be assessed through BioRecons, Stream Condition Indices, and the benthic macroinvertebrate component of the Lake Condition Index.[4] Use of these biological condition tools to assess Florida's narrative criteria for nuisance species is consistent with the state's water quality standards.

- Criteria: 62-302.530(47)(b) FAC (Nutrients): In no case shall nutrient concentrations of a body of water be altered so as to cause an imbalance in natural populations of aquatic flora or fauna.

Florida's water quality standards contain provisions which translate Florida's narrative nutrient standard for assessment purposes,[5] establishing thresholds of nutrient impairment which

[4] The IWR contains provisions that supplement Rule 62-302.530(11) by identifying additional biological condition indices, and methods for applying those indices, for use in water quality assessment. See Rules 62-303.200 (1), (2), (8) and (22); 62-303.330(2), (3)(a), and (3)(b); 62-303.430(1), (2), and (3); and 62-303.720(2)(b). EPA determined that these provisions constituted new or revised standards and approved those provisions as standards in February 2008. See 2008 IWR Determination, pp 26-32 and 2008 IWR Approval Letter.

[5] The IWR contains provisions that translate Rule 62-302.530(47)(b) when assessing water quality. See Rules 62, 303.200(6), (11), (12) and (25); 62-303.350(2)(c), (3); 62-303.351(2); 62-303.352; 62-303.353; 62-303.450(1); and 62-303.720(2)(j). EPA determined that these translation provisions constituted new or revised standards and approved those provisions as standards in February 2008. See 2008 IWR Determination, pp 33-42 and 2008 IWR Approval Letter.

US EPA ARCHIVE DOCUMENT

are "one-sided" in nature. That is, the thresholds represent upper boundary conditions above which a water body is not meeting its applicable water quality standards (unless demonstrated otherwise) and is identified as impaired. In other words, TSI or chlorophyll-a values are used to demonstrate that there is an "imbalance" in flora and fauna such that the narrative nutrient criterion is not attained. Waters below the IWR thresholds, however, are not considered "in attainment" of the narrative criterion. Rather, waters with TSI or chlorophyll-a values below the threshold of impairment will continue to be considered "unassessed" until FDEP adopts and EPA approves numeric criteria for nutrients or FDEP develops other methodologies that can be used to determine that an imbalance of flora and fauna does not exist in a water body.

FDEP has reasonably applied its water quality standards to assess waterbodies for attainment of the narrative nutrient standard.

2. List Development Methodology and Data Assessment

The Florida Watershed Restoration Act sets out, among other things, FDEP's authority to establish methodologies for identifying water quality limited segments and developing section 303(d) lists. FDEP uses a watershed management approach to assess state waters, managing the state's water resources on the basis of hydrologic units, as the framework for implementing the Watershed Restoration Act. Florida's watershed management program also adopted a rotating basin approach to address water quality issues, which allows the state to achieve maximum effectiveness from limited monitoring and assessment resources by concentrating specific functional activities in specific basins according to an established, multi-year schedule. Florida's basin planning process divides 52 water basins into five basin groups, with each group representing approximately 20% of state waters. The process rotates through those basin groups over an established five-year cycle. Information about Florida's basin planning process, the functions occurring during each year of the rotating basin cycle, and the basins included in each basin group are set out in more detail in Appendix E. Consistent with its rotating basin approach, FDEP will update its 303(d) list and 305(b) report annually and submit an annual 303(d) list update to EPA for review.[6]

FDEP's 2009 Update addresses waterbodies in the Group One, Two, and Five watersheds. The Update was developed in accordance with EPA's *Guidance for 2006 Assessment, Listing and Reporting Requirements Pursuant to Sections 303(d), 305(b) and 314 of the Clean Water Act* (Integrated Report Guidance), issued on July 29, 2005 and updated on October 12, 2006. That guidance recommends that states submit Integrated Reports to satisfy CWA requirements for both section 305(b) water quality reports and section 303(d) impaired

[6] FDEP submitted its first update to the state's section 303(d) list under the rotating basin approach in 2002. That assessment report covered Group One basins. EPA's decision regarding that update was challenged in federal court. That litigation was concluded in 2008. Litigation challenging the IWR was also concluded in 2008. EPA determined that certain provisions of the IWR, as amended in 2007, constituted new or revised water quality standards and approved those standards pursuant to section 303(c) of the CWA in February 2008. FDEP developed state assessment reports while the litigation was pending, but did not submit section 303(d) list updates to EPA for review.

US EPA ARCHIVE DOCUMENT

waters lists. EPA's guidance advocates the use of a five category approach for classifying the water quality standard attainment status for each waterbody segment. Florida uses several subcategories, in addition to the categories included in EPA's guidance.

Category 1 Data are available to assess whether all beneficial uses are being met and they are being met. (No waterbodies were included in this category.)

Category 2 Data are available to assess whether some beneficial uses are being met, while insufficient data are available to assess whether all beneficial uses are being met.

Category 3a No data are available to assess whether beneficial uses are being met.

Category 3b Some data are available, but they are insufficient to assess whether beneficial uses are being met.

Category 3c Enough data are available to meet the requirements for the Planning List in Rule 62-303 and the water body is potentially impaired for one or more designated uses.

Category 4a One or more designated uses are impaired and the TMDL is complete.

Category 4b One or more designated uses are impaired but no TMDL will be developed because a proposed pollution control measure provides reasonable assurance that the designated uses will be restored in the future.

Category 4c Impaired for one or more criteria or designated use but does not require a TMDL because the impairment is not caused by a pollutant.

Category 4d No causative pollutant has been identified for impairment. Waterbody impairments identified in this category will be submitted to EPA for inclusion on the section 303(d) list.

Category 4e Impaired but recently completed or ongoing restoration activities are underway to restore the designated uses of the waterbody. All requirements for placing the waterbody in Category 4b have not been finalized or approved by FDEP. Because FDEP recognizes the ongoing implementation of restoration activities with the goal of restoring water quality, a TMDL is not scheduled at this time. Waterbody impairments identified in this category will be submitted to EPA for inclusion on the section 303(d) list.

Category 5 Enough data are available to meet the requirements for the Verified List in Rule 62-303. These waters are impaired, are included on the state's 303(d) list, and will have TMDLs developed to restore them.

US EPA ARCHIVE DOCUMENT

3. Public Participation Process

The Florida Department of Environmental Protection (FDEP) notified the public about opportunities to participate in the development of each 303(d) list update. The State used notices in the Florida Administrative Weekly (FAW), email and regular mail notifications to over 1000 interested parties; and notices published in several newspapers statewide to notify the public of the list development activities.

The notifications included a brief description of the list at issue and the applicable regulations; a state website address where interested parties could obtain the draft list; a contact name, e-mail address, regular mailing address, and phone number where interested parties could obtain supporting information and information about planned public meetings; the times and locations for public meetings; procedures for submitting written comments; and the timetable in which a decision would be made on the list. FDEP also posted the draft 303(d) lists on its website along with information regarding the public participation opportunities.

FDEP held public meetings across the State. Department staff provided background information about the TMDL program, the 303(d) list, and how waters were assessed for impairment. Attendees were provided an opportunity to make verbal comments and were requested to: (a) comment on the appropriateness of the listing for individual water segments; (b) provide more recent information about the listed waters, including water quality and bioassessment data; (c) provide "other information" such as evidence of algal blooms or site specific studies about nutrient impairment in area waters; and (d) provide information about planned pollution control mechanisms. Attendees were also notified that written comments would be accepted.

The update to Florida's section 303(d) list which comprise the 2009 Update were adopted over a period of years. The update for Group One basins was adopted by Secretarial Order on June 2, 2008, and re-adopted, to incorporate revisions to the update, on May 19, 2009. The Group Five update was adopted by Secretarial Order on December 12, 2007, and re-adopted, to incorporate revisions to the update, on May 19, 2009. The update for the Group Two basins includes updates developed during two basin cycles. The first update for Group Two basins was adopted by Secretarial Order on May 27, 2004; the second update was adopted by Secretarial Order on May 19, 2009. Interested parties were notified about the adopted lists by e-mail, by publication of notices in the FAW, by notices in several newspapers statewide, and by issuance of Department press releases. Each Order notified interested parties of their right to challenge the order within 21 days or file an appeal within 30 days of receiving the notice.

EPA has reviewed Florida's public participation process and has concluded that the State provided adequate public notice and opportunity for the public to comment on its decision regarding the section 303(d) list in compliance with federal requirements.

4. Consideration of Existing and Readily Available Water Quality Related Data and Information

Florida identified WQLSs in the 2009 Update based on assessment and consideration of all existing and readily available water quality-related information and data. The information and data included physical, chemical, and biological data; shellfish reclassification information; fish consumption information; and beach closure information. The information and data were collected from the following sources:

EPA's STOrage and RETrieval (STORET) database
U.S. Geologic Survey
U.S. Army Corps of Engineers
Statewide Biological Database
Florida Department of Agriculture and Consumer Services
Florida Department of Health
Florida Game & Freshwater Fish Commission
Florida Marine Research Institute
FDEP Tallahassee

Once all of the data and information was collected, FDEP screened the data to remove any data that would not be appropriate for assessing water quality for the purpose of identifying water quality limited segments. FDEP provided EPA a description of data excluded from use under this assessment and the basis for that exclusion. Data were excluded for reasons including: data were reported with negative values, data were reported with values less than the detection limit, data were identified by data providers as of suspect quality, and mercury data were not collected and analyzed using clean techniques. A complete list of FDEP's data exclusion screens is set out in Appendix G.

US EPA ARCHIVE DOCUMENT

EPA has determined that FDEP's screening of data to remove data of suspect quality is a reasonable scientific approach for considering data when making decisions regarding the identification of water quality limited segments. In each case, it was reasonable to conclude that the sample result does not provide information that can be used to determine whether a waterbody meets water quality standards and the value reported cannot be relied upon as evidence of impairment.

B. Review of FDEP's Identification of Waters (40 CFR 130.7(b)(6)(i - iv))

Consistent with EPA regulations and guidance, EPA considered Florida's listing methodology to the extent that it reflects a reasonable interpretation of Florida's water quality standards and sound science.[7] In reviewing Florida's submittal, EPA first reviewed the methodologies set out in the IWR and used by FDEP to develop the list update in light of Florida's approved water quality standards, and then reviewed the actual list of waters. This section describes FDEP's listing methodology and outlines EPA's evaluation of both that methodology and the actual list of impaired waterbodies included on the 2009 Update. In cases where EPA could not determine if the Florida's listing methodology identified all impaired waterbodies for a given designated use or water quality criteria, EPA conducted a review of water quality data to determine whether any waterbodies should be added to the section 303(d) list.

The listing methodologies set out in the IWR and used by FDEP are compared against Florida's approved water quality standards as found in Chapter 62-302, FAC and those provisions of Chapter 62-303 which EPA determined were water quality standards. Information on monitoring procedures was obtained from the FDEP documents: "Elements of Florida's Water Monitoring and Assessment Program (March 19, 2009) and "Standard Operating Procedures for Field Activities (DEP-SOP-001/01 (March 31, 2008)).

1. Review of FDEP's Data Guidelines

Federal regulations provide that each state "shall assemble and evaluate all existing and readily available water quality-related data and information to develop the list required by 130.7(b)(1) and 130.7(b)(2)." See 40 CFR 130.7(b)(5). The IWR listing methodology set out in the IWR also provides for FDEP to "assemble and evaluate" data to prepare the State's section 303(d) list and generally provides for assessment when that data meets certain temporal and spatial guidelines set out in the rule. The IWR methodology contains guidelines for the collection, evaluation, and use of data for assessing water quality and impairments to designated uses. See Rules 62-303.320 and 62-303.420, FAC.

[7] In this document, the terms "IWR methodology," "listing methodology," or "methodology" are used to refer to those portions of the IWR which EPA determined were not water quality standards but were listing methodologies. EPA considers that methodology in reviewing Florida's 303(d) lists. The adequacy of the list, however, is measured only against EPA-approved state water quality standards, relevant provisions of the CWA, and EPA's implementing regulations.

US EPA ARCHIVE DOCUMENT

If water quality data was available for a waterbody, but that data did not meet the data sufficiency provisions contained in the IWR methodology, the methodology provides that FDEP may still consider whether the water should be listed on Florida's section 303(d) list (Category 5) where (1) there are less than twenty samples, but there are five or more samples that do not meet an applicable water quality criterion based on at least five temporally independent samples or (2) scientifically credible and compelling information provides overwhelming evidence of impairment. See Rule 62-303.420(7), FAC. FDEP might also include the water on either the list of waters with insufficient data for assessment (Category 3b) or the list of waters that are potentially impaired, also known as the "planning list" (Category 3c).

In its review of FDEP's 2002 Update to the state's approved section 303(d) list, EPA considered whether the IWR methodology overly restricted data analysis and, therefore, led to FDEP not identifying water quality limited segments during its assessment. EPA reviewed a random sample of waterbodies listed in Category 3b of Florida's Integrated Report. The random sample was selected to give the Region a 95% confidence that FDEP did not overlook impaired waterbodies when it determined that there was insufficient data to assess waterbodies for listing purposes. Based on that review, EPA determined that the listing methodology used by FDEP in its assessment process did not result in the failure to identify any water quality limited segments.[8]

EPA believes that its 2003 review of the adequacy of FDEP's listing methodology continues to be applicable to FDEP's current listing methodology. Although the 2007 amendments to the IWR included amendments to FDEP's listing methodology, those amendments resulted in increased flexibility which allowed FDEP to consider more data and to make decisions, where appropriate, based on smaller data sets than allowed under the original IWR.[9]

a. Minimum Sample Size

FDEP's listing methodology generally provides for a minimum of 20 samples to be assessed before a water can be listed as impaired in Category 5 of the state's section 303(d) list. Rule 62-303.420(2), FAC. In its 2003 review of FDEP's 2002 Update to the state's approved section 303(d) list, EPA determined that use of the minimum sample size could result in FDEP failing to identify impaired waters.

The 2007 amendments to the IWR, however, revised this provision of the methodology. See Rule 62-303.420(7). Rule 62-303.420(7) addresses the two most significant concerns EPA identified associated with the IWR methodology's minimum sample size provisions. First, this provision allows listing where data demonstrates sufficient exceedences of a criterion, even though the full 20 samples have not yet been

[8] See Appendix C. Decision Document Regarding Department Of Environmental Protection's §303(d) List Amendment Submitted On October 1, 2002 And Subsequently Amended On May 12, 2003. United States Environmental Protection Agency, Region 4. June 11, 2003.

[9] See, for example, Rule 62-303.420(7)(a), which addresses assessment of data sets containing less than the minimum sample size of 20.

US EPA ARCHIVE DOCUMENT

collected. For example, the binomial statistical method discussed below specifies 5 exceedances out of 20 samples to verify that a waterbody is impaired. Where a waterbody has 7 exceedances out of 10 samples, however, Rule 62-303.420(7)(a) provides that there is no need to collect an additional 10 samples to pass the IWR exceedance threshold. Second, Rule 62-303.420(7)(b) allows listing of waters based on limited data, without satisfying the methodology's exceedence threshold, in appropriate circumstances. Thus, FDEP's listing methodology doesn't categorically exclude data sets that don't meet a certain sample size but rather allows flexibility for further assessment in appropriate circumstances.

b. Age of Data

In its review of FDEP's 2002 Update, EPA considered the data cutoff in FDEP's methodology, which provided for FDEP to use only data collected within 7.5 years of that update. EPA's regulations require states to "assemble and evaluate all existing and readily available water quality-related data and information to develop [their impaired waters lists]." 40 CFR § 130.7(b)(5). EPA found FDEP's data cutoff reasonable, and found it an appropriate basis to not use existing and readily available data and information, as provided in 40 CFR § 130.7(b)(6)(iii). In Sierra Club et al. v. Leavitt, 488 F.3d 904 (11th Cir. 2007), the Eleventh Circuit Court of Appeals disagreed. The Court found that while 40 CFR § 130.7(b)(6)(iii) may allow a state to make a case for not using certain existing or readily available information, that regulation does not allow a state to avoid evaluating all such existing or readily available information. Bright line cutoffs which result in a state not considering data beyond a certain age result in the state not fulfilling requirement in 40 CFR § 130.7(b)(5) to consider all existing or readily available information.

For the assessments included in the 2009 Update, FDEP developed a process for including and considering data collected and analyzed outside of data periods established in the IWR methodology. This Period of Record (POR) assessment is an assessment of all data available for a particular waterbody. Since FDEP considers the most recent data as most representative of current conditions, if there is sufficient data within the 7.5 years preceding assessment, FDEP will make a listing decision based on that most recent data. However, if data collected with the preceding 7.5 years is not sufficient to make a listing decision, FDEP will consider data older than that period as addition to more recent data.

FDEP independently evaluates older data, considering the age and quality of the data, the magnitude of exceedances, the amount of old data relative to newer data, the source of the data, the documentation of the data, and any other information that would inform the Department regarding the quality of the data collectors and the laboratory used to analyze the samples. Data produced by the FDEP Central Laboratory or contained in Modern STORET and produced by a NELAC certified laboratory will be used without further data quality confirmation, although the other factors listed above will still be considered. Beginning with the 2009 Group 2 assessments, where older data indicates a waterbody may be impaired, FDEP will also ask the public, during the comment period

US EPA ARCHIVE DOCUMENT

on draft lists, for information about whether the older data remains representative of waterbody conditions.

FDEP's listing methodology doesn't categorically exclude older data sets but rather allows the state to use older data for assessment in appropriate circumstances. EPA considers FDEP's methodology for review of older data to be consistent with Florida's approved water quality standard for nutrients and with EPA's regulations

3. Waterbodies Verified Impaired but no Pollutant causing Impairment Identified

Most of the waters that EPA added to FDEP's section 303(d) list in 2003 were waters which FDEP had verified as impaired but where the state had not been able to identify the pollutant causing the impairment. The IWR methodology provides that such waters are not included in Category 5 of Florida's Integrated Report. Since 2003, however, FDEP has included a new category in its report, Category 4d. A water will be placed in Category 4d when it has been identified as impaired by FDEP but the causative pollutant has not been identified. Category 4d is included as part of the section 303(d) list submitted to EPA for review, although a TMDL will not be scheduled for Category 4d waters until FDEP identifies the pollutant causing the impairment.

4. Aquatic life use support

In reviewing FDEP's assessment of waterbodies with data and information associated with numeric water quality criteria, EPA considered a number of factors. These factors included whether more recent data show attainment that renders earlier data suspect (trends); the magnitude of exceedence; the frequency of exceedence; pollutant levels during critical conditions; and any other site-specific data and information such as biological monitoring, whether new controls have been implemented on the water, etc. EPA's conclusions related to several specific issues are set out below.

EPA separated its review of FDEP's assessment of Aquatic Life Use Support into three categories of impairments, those due to exceedences of numeric criteria, toxic pollutants, biological assessments, and nutrient impairments.

a. Exceedances of numeric water quality criteria

Some of Florida's numeric water quality criteria are expressed in the Table of Surface Water Criteria as not to be exceeded at any time. Standards expressed in this manner pose several challenges in assessing attainment, especially for naturally variable parameters. In terms of assessing waters to create a list of water-quality limited segments, it is reasonable to not treat every single sample as representing the true ambient condition of the water segment. Florida's Legislature recognized that sampling introduces variability into the testing process -- some due to natural variability and some associated with sample collection and analysis. Thus, a single sample does not determine whether a waterbody fails to meet water quality standards.

US EPA ARCHIVE DOCUMENT

The Florida legislature recognized that sampling introduces variability into the assessment process:

> It is the intent of the Legislature that water quality standards be reasonably established and applied to take into account the variability occurring in nature. The [FDEP] shall recognize the statistical variability inherent in sampling and testing procedures that are used to express water quality standards. The [FDEP] shall also recognize that some deviations from water quality standards occur as the result of natural background conditions. The [FDEP] shall not consider deviations from water quality standards to be violations when the discharger can demonstrate that the deviations would occur in the absence of any human-induced discharges or alterations to the water body. Section 403.021(11), Fla. Stat.

Because Florida does not have a monitoring program that continuously measures all points in its waterbodies, FDEP uses statistical sampling to estimate a waterbody's compliance with water quality standards. When assessing aquatic life use support, the statistical sampling method set out in the IWR methodology is a test based on a binomial distribution. See Rule 62-303.420(2).

The binomial statistical test has two key components, a confidence value and a probability value. The confidence value represents the desired certainty that small sample sizes are truly representative of the entire population. The confidence value is also expressed as a percentage value. In the IWR methodology, the confidence value is 90%. The probability value represents the proportion of samples that do not meet applicable water quality criteria before the waterbody, itself, is determined to be impaired. In FDEP's listing methodology, the probability value is 10%.

In 2005, EPA determined that the binomial statistical test was a new or revised water quality standard because it changed the allowable frequency of exceeding Florida's numeric water quality criteria from "not to be exceeded at any time" to "not to be exceeded more than 10% of the time." EPA changed that determination when reviewing the amended IWR in 2007, based on consideration of additional information provided by FDEP. EPA now understands that the purpose of the 10% probability value is to exclude data that are likely to be unrepresentative of actual ambient water conditions. Unless the number of samples ostensibly showing exceedence of the relevant water quality criterion is 10% or more, then FDEP will not list the receiving waters as having exceeded the criterion. The 10% probability value reflects the fact that the universe of samples assessed by FDEP are likely to include many unreliable and thus unrepresentative measurements, which do not accurately reflect the condition of the ambient water. Therefore, the State's binomial statistical test specifies that 10% or more of such samples exceed criterion magnitude values before FDEP will determine the waterbody itself does not meet water quality standards.[10]

[10] For a more detailed explanation of EPA's 2008 decision regarding the IWR binomial statistical test, see the 2008 IWR Determination, Appendix A.

US EPA ARCHIVE DOCUMENT

EPA considers FDEP's use of the binomial statistical test to be a reasonable way to assess data for 303(d) purposes, based in large part on the extensive database FDEP has developed on Florida waterbodies. In 2008, FDEP had some 45 million records in its database, making it impossible to do quality assurance on each data point. Rather than exclude all data of unknown quality, which is the majority of the currently available data and much of which is from third parties, FDEP developed an assessment methodology that allows consideration of as much data as possible related to as many waterbodies as possible.

EPA's evaluation is informed by the provision in FDEP's methodology which allows the state to consider overwhelming evidence of impairment in making assessment decisions. See Rule 62-303.420(7). This provision allows FDEP to consider data of known high quality and reliability, as well as data having other characteristics that make a credible and compelling case for non-attainment, and include waters on the 303(d) list based on such data. This provision helps provide needed flexibility for considering all relevant information pursuant to the regulatory requirements of 40 C.F.R. Part 130 for preparing an appropriate and complete list of impaired waters.

Some of Florida's numeric water quality criteria are for naturally variable parameters. Naturally variable parameters are those that fluctuate in a waterbody due to non anthropogenic influences such as rainfall/flow, depth, time of day, salinity, etc. Naturally variable parameters include dissolved oxygen (DO), turbidity, fecal coliform, total coliform, conductivity, and alkalinity. As to naturally variable pollutants, even if EPA determined the probability value were an allowable rate of criteria exceedence, that allowable exceedence would be consistent with Florida's underlying water quality criteria for those naturally variable pollutants. As explained more fully in Appendix F, applying a 10% exceedence rate to naturally variable pollutants would be consistent with EPA's general recommendations for such pollutants and would represent a reasonable choice for attainment decisions. EPA believes that FDEP's methodology has correctly interpreted Florida's own statute and regulations to recognize natural and statistical variability when making determinations of impairment. In Sierra Club et al. v. Leavitt, 488 F.3d 904 (11th Cir. 2007), the Eleventh Circuit Court of Appeals agreed. The court found it was reasonable for Florida to interpret the regulatory phrase that criteria are "not to be exceeded at any time" in concert with legislation providing that FDEP was to take into account the variability occurring in nature when applying the State's water quality standards. Id. at 919.

FDEP's use of the binomial statistical test is a reasonable method for assessing aquatic life use support for Florida's numeric water quality criteria. EPA reviewed FDEP's Master List, which serves as Florida's Integrated Report and includes waters on the state's section 303(d) list as well as waters in other categories of the Integrated Report. EPA identified eight segments of Lake Okeechobee that met the methodology's statistical test, based on turbidity data, but that were not included on the section 303(d) list. EPA has identified those waterbodies in Appendix C. EPA is adding the identified waterbodies to the State's section 303(d) list. EPA is approving the remainder of FDEP's

US EPA ARCHIVE DOCUMENT

listing decisions based on review of data and information regarding numeric criteria as relates to aquatic life use support based on that statistical test.

b. Waterbodies not Listed due to Natural Conditions

Based on direction from the legislature as set out above, Florida's water quality standards address natural conditions, providing that "the Department shall not strive to abate natural conditions." Rule 62-302.300(15), FAC. The standards define natural background as "the condition of waters in the absence of man-induced alterations based on the best scientific information available to the Department." The establishment of natural background for an altered waterbody "may be based upon a similar unaltered waterbody or on historical pre-alteration data." Rule 62-302.200, FAC. Such similar, unaltered waterbodies are also referred to as "reference waters." Rule 62-303.200(18). Reference waters can be representative of natural background conditions even where there is evidence of limited human disturbance in the waterbody or watershed, "as long as the anthropogenic sources do not produce a significant measurable or predicted effect on the parameter of concern in the waterbody." Id.

FDEP did not list a number of waterbodies where it determined that concentrations of dissolved oxygen measured below the numeric criteria due to natural conditions. The waterbodies affected by this decision can be placed into two categories, springs which originate from deep aquifer source water and blackwater streams which have extensive wetland dominated watersheds (marshes and swamps). Springs that originate from ground water from deep aquifers, such as the Floridan Aquifer, have been reported to be naturally low in dissolved oxygen content and do not contain higher levels of dissolved oxygen until adequate conditions for reaeration have occurred. Blackwater streams are characterized by warm water temperatures, low stream gradient, extensive riparian swamps, and waters darkly stained from humic substances leached from their catchments. Because of the high content of naturally occurring organic matter and low dissolved oxygen in waters in the associated riparian wetlands, periods of low dissolved oxygen naturally occur in these stream segments that serve as outflows and drain the wetlands areas.

EPA reviewed information submitted by FDEP as a demonstration that dissolved oxygen levels in 143 waterbodies represent natural background conditions in those waterbodies. EPA concluded that FDEP demonstrated that 122 of those waterbodies contain concentrations of dissolved oxygen that are below the water quality criterion generally applicable to Florida waterbodies due to natural background conditions. Therefore, EPA is approving FDEP's decision that these waterbodies should not be included on the State's section 303(d) list as reasonable. For 21 waterbodies, EPA concluded that the record submitted by FDEP was insufficient to support a determination that the DO concentrations in those waterbodies represent natural background conditions. EPA has identified those waterbodies in Appendix C. EPA is adding the identified waterbodies to the State's section 303(d) list.

US EPA ARCHIVE DOCUMENT

c. Impairments Indicated by Biological Information

Florida's water quality criterion for biological integrity is set out in Rule 62-302.530(11), which provides that biological integrity is to be measured by percent reduction of the Shannon Weaver Diversity Index. These criteria apply to Class I, II, and III waters, and provide that "[t]he Index for benthic macroinvertebrates shall not be reduced to less than 75% of background level. . . ." Florida's water quality standards also allow biological integrity to be assessed through BioRecons, Stream Condition Indices, and the benthic macroinvertebrate component of the Lake Condition Index.[11]

Based on its review of FDEP's assessment submittals, EPA has determined that FDEP appropriately assessed biological assessment data, in accordance with Florida's existing, EPA-approved water quality standards.

d. Impairments Indicated by Nutrient Information

Florida's water quality standard for nutrients is expressed as a narrative criteria, providing that "[i]n no case shall nutrient concentrations of a body of water be altered so as to cause an imbalance in natural populations of aquatic flora or fauna." 62-302.530(47)(b) FAC. Florida's water quality standards translate that narrative standard for assessment purposes.[12] The water quality standard provide for assessment of Florida's narrative criteria for nutrients as follows:

- Stream or stream segments shall be listed for nutrient impairment if the following biological imbalances are observed:
  a) algal mats are present in sufficient quantities to pose a nuisance or hinder reproduction of a threatened or endangered species, or
  b) annual mean chlorophyll a concentrations are greater than 20 ug/l or if data indicate annual mean chlorophyll a values have increased by more than 50% over historical values for at least two consecutive years.

- Lakes or lake segments will be listed for nutrients if:
  a) for lakes with a mean color greater than 40 platinum cobalt units, the annual mean TSI for the lake exceeds 60, unless paleolimnological information indicates the lake was naturally greater than 60, or
  b) for lakes with a mean color less than or equal to 40 platinum cobalt units,

[11] The biological assessment provisions in the IWR that EPA determined constituted new or revised water quality standards are Rules 62- 303.200 (1), (2), (8) and (22); 62-303.330(2), (3)(a), and (3)(b); 62-303.430(1), (2), and (3); and 62-303.720(2)(b). EPA approved those new or revised standards in February 2008.

[12] The narrative nutrient criteria translation provisions in the IWR that EPA determined constituted new or revised water quality standards are Rules 62, 303.200(6), (11), (12) and (25); 62-303.350(2)(c), (3); 62-303.351(2); 62-303.352; 62-303.353; 62-303.450(1); and 62-303.720(2)(j). EPA approved those standards in February 2008.

US EPA ARCHIVE DOCUMENT

the annual mean TSI for the lake exceeds 40, unless paleolimnological information indicates the lake was naturally greater than 40, or

c) for any lake, data indicate that annual mean TSIs have increased over the assessment period, as indicated by a positive slope in the means plotted versus time, or the annual mean TSI has increased by more than 10 units over historical values.

- Estuaries or estuary segments shall be included on the planning list for nutrients if their annual mean chlorophyll a for any year is greater than 11 ug/l or if data indicate annual mean chlorophyll a values have increased by more than 50% over historical values for at least two consecutive years.

The thresholds of nutrient impairment established in the water quality standard are "one-sided" in nature. That is, the thresholds represent upper boundary conditions above which a water is not meeting its applicable designated uses and is identified as impaired, unless there is a site specific showing otherwise. While the standard only identifies "impairment thresholds" (upper boundary conditions for TSI and chlorophyll-a above which a water body is considered impaired), and does not identify "attainment thresholds," it also provides for case-by-case assessment of water bodies that fall below the impairment threshold. Rule 62-303.450(1), FAC, provides for the development of site-specific thresholds that better represent the levels at which nutrient impairments occur. In addition, FDEP's listing methodology provides for other information, aside from the thresholds, to be used to determine if an imbalance in flora or fauna exists. See Rule 62-303.350(1), FAC.

Florida's water quality standards also outline the conditions under which a water body may be de-listed from the state's section 303(d) list. Rule 62-303.720(2)(j), FAC, provides that, for waters listed based on nutrient impairment, "the water shall be de-listed if it does not meet the listing thresholds in Rule 62-303.450, FAC, for three consecutive years." In these instances, the basis for removing the water from the list is that newer data express significant uncertainty as to whether the waters are impaired.

Typically, data used to assess waters is compared to numeric criteria as opposed to one-sided impairment thresholds. In such cases, a delisting decision is made where data show that pollutant concentrations are below the numeric criteria and the condition that was the basis for listing no longer exists. Similarly, in the case of one-side impairment thresholds, FDEP makes a delisting decision where data show that pollutant concentrations are below the impairment thresholds and, therefore, the condition that was the basis for the listing no longer exists. Because the threshold is one-sided, however, the water is considered "unassessed" rather than "unimpaired."

Since FDEP's listing methodology is consistent with Florida's approved water quality standard for nutrients and with EPA's regulations, EPA is approving FDEP's listing decisions for nutrients based on that methodology.

US EPA ARCHIVE DOCUMENT

5. Primary and Secondary Recreational Use Support

FDEP applies two tests for determining whether a waterbody's recreational use is impaired. First, FDEP looks at swimming advisories. Waterbodies which include a swimming area for which a local health department or county government has issued closures, advisories, or warnings based on bacteriological data are listed as impaired when those advisories apply for a total of 21 days or more during a calendar year.[13] However, the methodology provides that closures, advisories, or warnings based on red tides, rip tides, sewer line breaks, sharks, medical wastes, hurricanes, or other factors not related to chronic discharges of pollutants are not included in the assessment. For waterbodies considered during this listing cycle, no beach closures, advisories, or warnings based on these circumstances occurred. Therefore exclusion of this type of advisory from the analysis did not factor into the assessment for 303(d) listing and it was unnecessary for EPA to review this provision further as it had no effect on the list.

FDEP's methodology considers ambient bacteria data in assessing the State's water quality standard for fecal coliform. For Class III: Recreation use, the bacteria criteria, set out at Rule 62-302.530(6), are as follows:

> For fecal coliform: Most probable number (MPN) or membrane filter (MF) per 100 ml shall not exceed a monthly average of 200, nor exceed 400 in 10% of the samples, nor exceed 800 on any one day.
>
> Monthly averages for fecal coliform shall be expressed as geometric means based on a minimum of 10 samples taken over a 30 day period.

The methodology provides that FDEP use the binomial statistical test in evaluating ambient water data for assessment of the water quality criteria for bacteriological quality, with the exception that paragraph 62-303.320(4)(a), FAC, does not apply and samples collected on different days within any four day period will be assessed as daily samples.

For the reasons set out in the section addressing assessment of aquatic life use support above, EPA has determined that use of the binomial statistical test is a reasonable method for FDEP to assess ambient water data for fecal coliform. EPA is approving FDEP's listing decisions for bacteria related to recreational use based on that methodology.

6. Fish and Shellfish Consumption Use Support

EPA reviewed FDEP's methodology for assessing fish and shellfish consumption use support (Class II). The methodology provides for FDEP to make listing decisions

[13] EPA determined that provisions in the IWR further characterized the recreational designated use, set out in Rule 62-302.400, FAC, by quantifying the unacceptable loss of use from closures, advisories, and warnings at 21 days. See 2008 IWR Determination, pp 42-43. The associated criteria for those designated uses did not change.

US EPA ARCHIVE DOCUMENT

based on bacteriological data, fish consumption advisories, and Shellfish Evaluation and Assessment (SEAS) Program status as it relates to fish and shellfish use support. See 62-303.470.

The listing methodology provides for use of the binomial statistical test in evaluating ambient water data for assessment of the water quality criteria for bacteriological quality, with the exception that paragraph 62-303.320(4)(a), FAC, does not apply and samples collected on different days within any four day period will be assessed as daily samples. The methodology further provides that waters will be identified as impaired where a sampling location has a median fecal coliform MPN value that exceeds 14 counts per 100 ml for the verified period being assessed.

The listing methodology provides that FDEP reviews data used by DOH as the basis for fish consumption advisories to determine if the data are appropriate to use for listing decisions. The methodology also provides FDEP the ability to use fish consumption advisories and other scientifically credible and compelling information indicating that applicable human health-based water quality criteria are not being met as a basis for listing decisions. Finally, the methodology provides that SEAS status will be used in listing decisions consistent with Florida's underlying uses and criteria.

EPA agrees that Florida's listing methodology, as revised, provides for FDEP to make listing decisions based on bacteriological data and shellfish harvesting classification information and in a manner consistent with the state's currently applicable water quality standards and EPA regulations EPA believes that use of the binomial statistical test is a reasonable method for FDEP to assess ambient water data for fish and shellfish consumption use support. EPA is approving FDEP's listing decisions for fish and shellfish use support based on that methodology.

7. Drinking Water Use Support and Protection of Human Health

Assessment of drinking water use support can be broken down into the evaluation of three types of criteria: bacteriological criteria, criteria expressed as a maximum concentration, and criteria expressed as an annual average.

The FDEP listing methodology provides for listing waters on the section 303(d) list if they exceed human health-based criteria expressed as annual averages, or those expressed as maximums or single-sample bacteriological criteria. FDEP is to use the binomial statistical test in evaluating data in relation to maximum or single-sample bacteriological water quality criteria, with the exception that paragraph 62-303.320(4)(a), FAC, does not apply and samples collected on different days within any four day period will be assessed as daily samples.

EPA considers that the methodology provides for FDEP to make listing decisions based on bacteriological data in a manner consistent with the state's currently applicable water quality standards and EPA regulations. EPA believes that use of the binomial statistical test is a reasonable method for FDEP to assess ambient water data for drinking

US EPA ARCHIVE DOCUMENT

water use support and protection of human health . EPA is approving FDEP's listing decisions for drinking water and protection of human health use support based on that methodology.

C. 303(d) List of Impaired Waters

FDEP submitted its 2009 section 303(d) submittals as updates to Groups One, Two, and Five which amend the State's previously approved 303(d) list. Following EPA's decision to partially approve and add waters to Florida's 2009 submission, the current 303(d) list in the State of Florida includes all waters on the 2003 EPA-approved section 303(d) list as well as approved FDEP additions and EPA additions to that list, minus EPA approved FDEP delistings from that list.

	Approved 2003 303(d) List	(Appendix A)
(+)	Approved Group One FDEP Additions	(Appendix B)
(+)	EPA Additions	(Appendix C)
(-)	Approved FDEP Delistings	(Appendix D)

1. FDEP's Addition of Water Quality Limited Segments

FDEP identified additional water quality limited segments in the Group One basins, consistent with section 303(d) and EPA's implementing regulations. EPA is approving the addition of those water quality limited segments to Florida's section 303(d) list. The newly listed waterbodies are identified in Appendix B.

2. FDEP's Delisting of Water Quality Limited Segments

FDEP has not included certain water quality limited segments on the 2009 Update which had been included on the previously approved 2003 section 303(d). As provided in 40 CFR 130.7(b)(6)(iv), EPA requested that the State demonstrate good cause for not including these waters.

The State did not include Lake Seminole on the section 303(d) list because the State believes there are other pollution control requirements affecting those waters that will result in attainment of water quality standards. EPA's review of FDEP's listing decision as Lake Seminole is set out below.

Waterbody specific information on the remainder of the waterbodies that had been included on the 2003 section 303(d) list but were not included on the 2009 Update, the good cause justification submitted by FDEP, and EPA's conclusions are included in Appendix D. For those waterbodies where EPA determined FDEP has not demonstrated good cause, EPA is adding the identified waterbodies to the State's section 303(d) list.

US EPA ARCHIVE DOCUMENT

3. Other Pollution Control Requirements

EPA's regulations provide that TMDLs are not required for waterbodies where "[o]ther pollution control requirements (e.g., best management practices) required by local, State, or Federal authority are [ ] stringent enough to implement any water quality standards [WQS] applicable to such waters." 40 C.F.R. § 130.7(b)(1)(iii).

Consistent with this regulation, EPA's 2008 Integrated Water Quality Monitoring and Assessment Report Guidance suggests that waters may be listed in Category 4b of a state's Integrated Report, rather than Category 5 (waterbodies that still require TMDLs), where other pollution control requirements required by local, state, or federal authority are stringent enough to implement any water quality standard applicable to such waters. Demonstrations that waters should be placed in Category 4b should address the following six elements:

1. Identification of segment and statement of problem causing the impairment;
2. Description of pollution controls and how they will achieve water quality standards;
3. An estimate or projection of the time when WQS will be met;
4. Schedule for implementing pollution controls;
5. Monitoring plan to track effectiveness of pollution controls; and
6. Commitment to revise pollution controls, as necessary.

FDEP has placed Lake Seminole, WBID 1618, in Category 4b, rather than Category 5, based on proposed pollution control requirements that FDEP expects to result in the attainment of the water quality standards in the near future. In 2004, the Pinellas County Board of County Commissioners adopted the Lake Seminole Watershed Management Plan (Plan) to address elevated nutrients in the lake which have resulted in hyper-eutrophic conditions and associated water quality violations, such as dissolved oxygen.

The Lake Seminole Watershed Management Plan includes three proposed management activities to restore water quality in Lake Seminole:

- reduce external phosphorus loadings;
- reduce internal nutrient recycling; and
- reduce lake hydrologic residence time.

The Plan specifies four major projects aimed at improving water quality in the lake. These projects include: 1) retrofitting stormwater outflows from the five highest nutrient loading subbasins with alum treatment systems; 2) alum treatment and diversion of a portion of flows in the Lake Seminole Bypass Canal into Lake Seminole; 3) removal of organic muck sediments; and 4) lake level fluctuation.

Pinellas County has dedicated substantial funds in their 2007-2012 Capital Improvement Plan, and has secured funding agreements with other agencies, as necessary

US EPA ARCHIVE DOCUMENT

to ensure the full implementation of the four major water quality improvement projects, as well as other associated infrastructure improvements. The County has allocated $4.9 million for the design and construction of the alum stormwater and bypass canal diversion treatment facilities and $8 million to remove organic sediments from the lake. The County is moving forward with construction on these projects, and as of April 2007 a contractor had been selected for the sediment removal project.

All proposed restoration projects at Lake Seminole are scheduled to be completed by 2012. This deadline coincides with the next scheduled impaired waters evaluation for Group 5 basins, including Lake Seminole.

Pinellas County's commitment to implement the water quality improvement projects are fully enforceable through the County's existing State of Florida Municipal Separate Storm Sewer System (MS4) Permit, issued under the National Pollutant Discharge Elimination System (NPDES) program. In addition, continued operation and maintenance of the alum stormwater and bypass canal diversion treatment facilities is guaranteed under a cooperative funding agreement between Pinellas County and SWFWMD.

Pinellas County has developed an extensive monitoring plan for the lake, including monitoring water, benthic and sediment quality, to evaluate the success of the treatment facility and the effectiveness of the settling area. The County will publish an annual State-of-the-Lake report which summarizes all of the monitoring data collected during the previous calendar year. In addition to monitoring data summaries, the annual report will include the status for all proposed management activities.

The water quality improvement projects outlined above will be implemented over three phases. Upon completion of each phase, the County will look at whether water quality in the Lake has improved. The third phase component, which includes whole lake alum applications, will be implemented only if previous restoration projects were not successful in improving water quality. After all proposed restoration projects have been implemented, Lake Seminole will be re-evaluated and new management techniques will be considered if further water quality improvement is necessary.

EPA has determined that the Lake Seminole Watershed Management Plan meets the requirements of 40 C.F.R. § 130.7(b)(1)(iii). Therefore, the lake need not be identified as a water quality limited segment and included on the section 303(d) list. EPA will periodically reevaluate the need to identify the lake as water quality limited, based on the outcome of the Pinellas County Plan.

4. EPA Identified Waters

Based on its review and analysis of FDEP's listing decisions as set out above, EPA has decided to add waters to Florida's section 303(d) list. The additional water quality limited segments identified by EPA are set out in Appendix C.

US EPA ARCHIVE DOCUMENT

5. Priority Ranking and Targeting

Section 303(d)(1)(A) of the Clean Water Act requires states to "establish a priority ranking for [impaired waters], taking into account the severity of the pollution and the uses to be made of such waters." EPA's implementing regulations require states to include in their impaired waters list a priority ranking for all listed water quality limited segments as well as an identification of waters targeted for TMDL development within the next two years. 40 C.F.R. § 130.7(b)(4).

Pursuant to the listing methodology set out in the IWR, FDEP prioritized water quality limited segments for TMDL development according to the severity of the impairment and the designated uses of the segment, taking into account the most serious water quality problems, most valuable and threatened resources, and risk to human health and aquatic life. Waterbodies included on the section 303(d) list were prioritized as high, medium, or low priority. See Rule 62-303.500.

Waters were designated high priority if (a) the impairment poses a threat to potable water supplies or to human health, or (b) the impairment is due to a pollutant that has contributed to the decline or extirpation of a federally listed threatened or endangered species. Also, waters listed due to fish consumption advisories for mercury were designated high priority. FDEP notes its intent to address mercury through a statewide TMDL which is is scheduled to be completed in 2012.

Waters were designated as low priority if (a) the water was an urban drainage ditch that was listed only due to exceedences of the DO criteria, or (b) waters not previously on a planning list of impaired waters that were identified as impaired during subsequent phases of Florida's rotating basin approach, unless newly listed segments meet the criteria for high priority.

All other water quality limited segments were designated medium priority and were prioritized based on the following factors:

(1) the presence of Outstanding Florida Waters;
(2) the presence of water segments that fail to meet more than one designated use or exceed more than one applicable water quality criterion;
(3) the presence of water segments that exceed an applicable water quality criterion or alternative threshold with a greater than twenty-five percent exceedence frequency with a minimum of a 90 percent confidence level; or
(4) the administrative needs of the TMDL program, including meeting a TMDL development schedule agreed to with EPA, basin priorities related to following the Department's watershed management approach, and the number of administratively continued permits in the basin.

Appendix B shows the priority and projected year for TMDL development for each waterbody included on the section 303(d) list. Waters with high priority were

US EPA ARCHIVE DOCUMENT

generally scheduled for TMDL development by FDEP during the current watershed cycle, while medium and most low priority waters were scheduled for the next cycle. All water quality limited segments identified by EPA in Appendix C have been given low priority and are currently unscheduled for TMDL development, unless they are subject to the Consent Decree schedule described below.

TMDL development will also follow the schedule set out in the Consent Decree in Florida Wildlife Federation, et al. v. Browner, Civil Action No. 4: 98CV356-WS (Northern District of Fla.). All waterbodies on the 1998 list that were not delisted are scheduled for TMDL development according to this Consent Decree.

Upon review, EPA has determined that FDEP's priority ranking of impaired waters and targeting of those waters for TMDL development are consistent with the requirements of the CWA and EPA's implementing regulations.

IV. Final Recommendation on Florida's 2009 Section 303(d) List Submittal

After careful review of the final 303(d) list submittal package, the Water Management Division recommends that EPA Region 4:

A. approve the State of Florida's amendments to the 2003 section §303(d) list as identified in Appendices B and D;
B. disapprove specific failures to identify water quality limited segments as identified in Appendix C;
C. disapprove specific delistings requests as identified in Appendix D;
D. add the water quality limited segments identified in Appendix C and those specific delistings disapproved by EPA in Appendix D to the Florida section 303(d) list.

EPA's approval of Florida's section 303(d) list extends to all waterbodies on the list with the exception of those waters that are within Indian Country, as defined in 18 U.S.C. section 1151. EPA is taking no action to approve or disapprove the State's list with respect to those waters at this time. EPA, or eligible Indian Tribes, as appropriate, will retain responsibilities under section 303(d) for those waters.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	ASSESSMENT CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
roup 1	Suwannee	Waccasassa River	LITTLE WACCASASSA RIVER	3747	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. EPA understands that DEP intends to adopt this change to the delist list, and submit this water for inclusion on the 303(d) List as IR category 4d, in December 2009. In the interim, this water will remain on the 303(d) List in IR category 3c.
roup 1	Tampa Bay	Coastal Hillsborough Bay Tributary	SIXMILE CREEK	1536B	Turbidity	Turbidity	2	2	Delisting Not Accepted. Insufficient data to assess in the verified or planning periods. This water will remain on the 303(d) List in IR category 3c.
roup 2	Apalachicola - Chipola	Apalachicola River	Sutton Creek	822		Dissolved Oxygen	2	4c	Decision Not to List Not Accepted. Based on independent review, water is impaired for DO with insufficient evidence of natural condition.
roup 2	Apalachicola - Chipola	Apalachicola River	Mosquito Creek Upper Segment	376		Fecal Coliform	2	3b	Delisting not Accepted. The data which supported cycle 1 verification of 376 was collected from the Class 3F waters which comprised most of this water, as defined in 2002. Post-2002 division of this water into a small, central Class I area (376), and a surrounding Class 3F drainage area (376A), resulted in reassignment of all available data to 376A. Florida is verifying 376A for fecal coliform, based on assessment of that data. No data is now available to assess 376, but the impaired status of the surrounding drainage area provides evidence that 376 could be impaired. EPA cannot support delisting of 376 until data is available to confirm that this Class I area has not been adversely impacted by the surrounding impaired drainage area. EPA will add this water to the 303(d) List.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	ASSESSMENT CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
roup 2	Middle St. Johns	Deep Creek Unit MSJR	Lake Ashby Creek	2936		Dissolved Oxygen	2	4c	Decision Not to List Not Accepted. Based on independent review, water is impaired for DO with insufficient evidence of natural condition.
roup 2	Middle St. Johns	Econlockhatchee River	Econlockhatchee River	2991A	Dissolved Oxygen	Dissolved Oxygen	1	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. This water will remain on the 303(d) List for DO in IR category 3c.
roup 2	Middle St. Johns	Econlockhatchee River	Little Econlockhatchee River	3001	Dissolved Oxygen	Dissolved Oxygen	1	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. This water will remain on the 303(d) List for DO in IR category 3c.
roup 2	Middle St. Johns	Wekiva River	Lower Wekiva River	2956B		Dissolved Oxygen	2	4c	Decision Not to List Not Accepted. Based on independent review, water is impaired for DO with insufficient evidence of natural condition. EPA would accept an assessment call of 4a, as a nutrient TMDL for this water was approved on 9-9-08.
roup 2	St. Lucie - Loxahatchee	C-25	Cowbone Creek (C-25)	3189	Dissolved Oxygen	Dissolved Oxygen	2	3a	Delisting not accepted. A DO TMDL was proposed for this water in 2006. 1998 listing was apparently based on data collected in the immediately adjacent 3160 - a much larger water which surrounds, and drains to, 3189. DEP has verified 3160 for DO, and nutrients is a possible cause. Since 3160 drains to 3189, 3189 should remain listed until adequate data to assess becomes available. This water will remain on the 303(d) List in IR category 3c.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Everglades West Coast	Estero Bay	ESTERO RIVER MARINE	3258D1		Copper	2	2	Delisting Accepted: WBID was listed in IWR cycle 1, and now meets 62-303.720(2)(a)1.
Group 1	Everglades West Coast	Estero Bay	SPRING CREEK	3258H	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 1	Everglades West Coast	Interdrainage Area	TAMIAMI CANAL	3261B	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 1	Everglades West Coast	Interdrainage Area	TAMIAMI CANAL	3261B	Cadmium	Cadmium	2	2	Delisting Accepted: Independent data review confirmed no exceedances in an extensive sample set collected over the last 7.5 years.
Group 1	Everglades West Coast	Southwest Coast	COCOHATCHEE RIVER	3259A	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 1	Everglades West Coast	Southwest Coast	LAKE TRAFFORD	3259W		pH	2	4a	Delisting Accepted. DEP completed and adopted a TMDL for nutrients, DO and un-ionized ammonia which addresses pH.
Group 1	Everglades West Coast	Southwest Coast	COCOHATCHEE INLAND	3278D		Iron	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an extensive sample set collected over the last 7.5 years. This waterbody was identified as 3259B at the time of 2002 listing, so EPA's action applies to 3259B. Other parts of 3259B have been assessed appropriately in the current cycle.
Group 1	Everglades West Coast	Southwest Coast	GORDON RIVER EXTENSION	3278K	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an extensive sample set collected over the last 7.5 years. This waterbody comprises part of 3259C, as listed in 1998, so EPA's action applies to 3259C. Other parts of 3259C have been assessed appropriately in the current cycle.
Group 1	Everglades West Coast	Southwest Coast	SOUTHWEST COAST GULF 5	8065		Bacteria (in Shellfish)	2	4c	Delisting In Error. DEP included this water on the final Verified List, so it is being added to the 303(d) List. EPA understands that DEP intends to adopt this change to the delist list in December 2009.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212A	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Not Needed: EPA approved a DO delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL which addresses DO.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212A	Nutrients	Nutrients (TSI)	2	4a	Delisting Not Needed: EPA approved a nutrient delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212B	Nutrients	Nutrients (TSI)	2	4a	Delisting Not Needed: EPA approved a nutrient delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212C	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Not Needed: EPA approved a DO delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL which addresses DO.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212D	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Not Needed: EPA approved a DO delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL which addresses DO.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212D	Nutrients	Nutrients (TSI)	2	4a	Delisting Not Needed: EPA approved a nutrient delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212D	Un-ionized Ammonia	Un-ionized Ammonia	2	4a	Delisting Not Needed. EPA accepted delisting of this water in 2003, based on attainment of WQS. Assessment category will be changed to 4a, based on establishement and approval of a nutrient TMDL for this water on 10-16-01.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212E	Nutrients	Nutrients (TSI)	2	4a	Delisting Not Needed: EPA approved a nutrient delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212F	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Not Needed: EPA approved a DO delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL which addresses DO. Based on the current assessment, the water is attaining the WQS.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212G	Nutrients	Nutrients (TSI)	2	4a	Delisting Not Needed: EPA approved a nutrient delisting for this water in 2003, based on 10-16-01 establishment and approval of a TP TMDL.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212G	Un-ionized Ammonia	Un-ionized Ammonia	2	4a	Delisting Accepted. A TP TMDL for this water was established and approved 10-16-01. Delisting was also accepted in 2003, based on attainment of WQS.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212H		Nutrients (TSI)	2	4a	Delisting Not Needed. 3212H was not included on the 1998 List or the 2002 Update for nutrients, as a nutrient TMDL was approved 10-16-01, prior to submittal of DEP's 2002 Update.
Group 1	Lake Okeechobee	Lake Okeechobee	LAKE OKEECHOBEE	3212I	Nutrients	Nutrients (TSI)	2	4a	Delisting Not Needed. 3212I was not included on the 1998 List or the 2002 Update for nutrients, as a nutrient TMDL was approved 10-16-01, prior to submittal of DEP's 2002 Update.
Group 1	Lake Okeechobee	TOL Complex	TAYLOR CREEK	3205	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review confirmed that the number of samples exceeding the WQS in a large sample set collected within the last 7.5 years was well below the threshold for verification.
Group 1	Ochlockonee - St. Marks	Lake Iamonia	LAKE IAMONIA OUTLET	442	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 400 CFU in a large sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	Lake Iamonia	LAKE IAMONIA OUTLET	442	Nutrients	Nutrients (Chlorophyll-a)	2	2	Delisting Not Needed. EPA approved a nutrient delisting for this water in the 2003 Decision Document (cycle 1). Data continues to support attainment status.
Group 1	Ochlockonee - St. Marks	Lake Jackson	HARBINWOOD ESTATES	746	BOD 5Day	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review of an adequate DO sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. Standard for BOD linked to DO impairment.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Ochlockonee - St. Marks	Lake Jackson	MEGGINNIS ARM RUN	809	BOD 5Day	Dissolved Oxygen	2	2	Delisting Accepted. Median BOD is below screening level (median 0.52 mg/l).
Group 1	Ochlockonee - St. Marks	Lake Jackson	MEGGINNIS ARM RUN	809	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. EPA understands that DEP intends to adopt this change to the delist list, and submit this water for inclusion on the 303(d) List as IR category 4d, in December 2009. In the interim, this water will remain on the 303(d) List in IR category 3c.
Group 1	Ochlockonee - St. Marks	Lake Jackson	MEGGINNIS ARM RUN	809	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	Lake Jackson	MEGGINNIS ARM RUN	809	Total Suspended Solids (TSS)	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	Lake Jackson	MEGGINNIS ARM RUN	809	Turbidity	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	Lake Lafayette	LAKE LAFAYETTE DRAIN	756	Coliforms	Fecal Coliform	2	2	Delisting Not Accepted: WBID was listed in IWR cycle 1, and does not meet 62-303.720(2)(a)1. EPA understands that DEP intends to adopt this change to the delist list in December 2009. This water remains on the 303(d) List in IR category 3c.
Group 1	Ochlockonee - St. Marks	Lake Lafayette	LAKE LAFAYETTE DRAIN	756	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	Lake Lafayette	LAKE LAFAYETTE DRAIN	756	Nutrients	Nutrients (Historic Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.

Group 1	Ochlockonee - St. Marks	Lake Munson/Fred George Sink	EAST DRAINAGE DITCH	916	BOD 5Day	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review of a considerable sample set collected for DO over the last 7.5 years confirmed that water quality does not indicate DO impairment. Standard for BOD linked to DO impairment.
Group 1	Ochlockonee - St. Marks	Lake Munson/Fred George Sink	EAST DRAINAGE DITCH	916	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	Lake Munson/Fred George Sink	EAST DRAINAGE DITCH	916	Total Suspended Solids (TSS)	Turbidity	2	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	Lake Munson/Fred George Sink	EAST DRAINAGE DITCH	916	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	Lake Munson/Fred George Sink	MUNSON SLOUGH (ABOVE LAKE MUNSON)	807D	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	Lake Munson/Fred George Sink	MUNSON SLOUGH (ABOVE LAKE MUNSON)	807D	Turbidity	Turbidity	2	2	Delisting Not Needed. EPA accepted turbidity delisting for this water in the 2003 Decision Document. Independent data review of data set for the Period of Record confirm that the water continues to meet WQS for turbidity.
Group 1	Ochlockonee - St. Marks	Lake Munson/Fred George Sink	LAKE BRADFORD	878A	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	LITTLE RIVER	424	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 400 CFU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	LITTLE RIVER	424	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	LITTLE RIVER	424	Total Suspended Solids (TSS)	Turbidity	2	2	Delisting Not Needed. EPA accepted turbidity delisting for this water in the 2003 Decision Document. Independent data review of the current data set confirmed that the water continues to meet WQS.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	LITTLE RIVER	424	Turbidity	Turbidity	2	2	Delisting Not Needed. EPA accepted turbidity delisting for this water in the 2003 Decision Document. Independent data review of the current data set confirmed that the water continues to meet WQS.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	SWAMP CREEK	427	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	SWAMP CREEK	427	Total Suspended Solids (TSS)	Turbidity	2	2	Delisting Accepted. Independent data review confirmed that the number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	SWAMP CREEK	427	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review confirmed that the number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	OCHLOCKONEE RIVER	1297F	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 400 CFU in a large sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	OCHLOCKONEE RIVER	1297F	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	North Ochlockonee River	OCHLOCKONEE RIVER	1297F	Turbidity	Turbidity	2	2	Delisting Not Needed. EPA accepted turbidity delisting for this water in the 2003 Decision Document. Independent data review of the current data set confirmed that the water continues to meet WQS.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Ochlockonee - St. Marks	Sopchoppy River	OCHLOCKONEE BAY	1248C		Fecal Coliform (3)	2	2	Delisting In Error. DEP included this water on the final Verified List, based on comparison to the 43 MPN criterion, so it is being added to the 303(d) List. EPA understands that DEP intends to adopt this change to the delist list in December 2009.
Group 1	Ochlockonee - St. Marks	South Ochlockonee River	OCHLOCKONEE RIVER	1297A	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Not Needed. EPA accepted DO delisting of this water in the 2003 Decision Document based on independent data review. Current independent data review of a considerable sample set collected for DO over the last 7.5 years confirmed that water quality continues to show attainment and should remain delisted.
Group 1	Ochlockonee - St. Marks	South Ochlockonee River	OCHLOCKONEE RIVER	1297B	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed no samples above 400 CFU in an adequate sample set collected within the last 7.5 years.
Group 1	Ochlockonee - St. Marks	South Ochlockonee River	OCHLOCKONEE RIVER	1297B	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Needed. EPA accepted delisting of this water in the 2003 Decision Document, based on dataset which did not show evidence of impairment. 2008 TMDL not needed document supports current finding that DO is impaired, but impairment is attributable to pollution resulting from an upstream dam. EPA will therefore change assessment category from 2 to 4c.
Group 1	Ochlockonee - St. Marks	South Ochlockonee River	OCHLOCKONEE RIVER	1297B	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	South Ochlockonee River	OCHLOCKONEE RIVER	1297B	Nutrients	Nutrients (Historic Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ochlockonee - St. Marks	South Ochlockonee River	OCHLOCKONEE RIVER	1297B	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 29 NTU in a large sample set collected within the last 7.5 years was well below the threshold for verification.

Group 1	Ocklawaha	Lake Harris Unit	LAKE APOPKA OUTLET	2835A	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Accepted: A DO TMDL for this water was approved on 9-30-03.
Group 1	Ocklawaha	Lake Harris Unit	LAKE APOPKA OUTLET	2835A	Nutrients	Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted: A DO TMDL for this water, which also addressed nutrients, was approved on 9-30-03.
Group 1	Ocklawaha	Lake Harris Unit	LAKE CARLTON	2837B	Nutrients	Nutrients (TSI)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved 5-17-04.
Group 1	Ocklawaha	Lake Harris Unit	LAKE CARLTON	2837B	Un-ionized Ammonia	Un-ionized Ammonia	2	2	Delisting Accepted: Independent data review confirms that the number of samples above 0.02 mg/L in a large sample set collected for 2837B within the last 7.5 years is below the threshold for verification.
Group 1	Ocklawaha	Lake Harris Unit	LAKE CARLTON	2837B	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Accepted: A nutrient TMDL for this water, approved 5-17-04, will also address DO.
Group 1	Ocklawaha	Lake Harris Unit	LAKE HARRIS	2838A		Dissolved Oxygen	2	4a	Delisting Accepted: A nutrient TMDL for this water, approved 9-30-03, also addressed DO.
Group 1	Ocklawaha	Lake Harris Unit	LAKE HARRIS	2838A	Lead	Lead	2	2	Delisting Accepted: Independent data review confirmed no exceedances out of numerous samples collected for 2838A over the last 7.5 years.
Group 1	Ocklawaha	Lake Harris Unit	LAKE HARRIS	2838A	Nutrients	Nutrients (TSI)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-30-03.
Group 1	Ocklawaha	Lake Harris Unit	LAKE HARRIS	2838A	Selenium	Selenium	2	2	Delisting Accepted: Independent data review confirmed no samples above 5 ug/L in a considerable sample set collected for 2838A over the last 7.5 years.
Group 1	Ocklawaha	Lake Harris Unit	LITTLE LAKE HARRIS	2838B		Dissolved Oxygen	2	4a	Delisting Accepted: A nutrient TMDL for this water, approved 9-30-03, also addressed DO.
Group 1	Ocklawaha	Lake Harris Unit	LITTLE LAKE HARRIS	2838B	Nutrients	Nutrients (TSI)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-30-03.
Group 1	Ocklawaha	Lake Harris Unit	LITTLE LAKE HARRIS	2838B	Un-ionized Ammonia	Un-ionized Ammonia	2	2	Delisting Accepted: A nutrient TMDL for this water, approved 9-30-03, also addressed un-ionized Ammonia.
Group 1	Ocklawaha	Lake Harris Unit	LAKE BLUE SPRINGS	2838C	Cadmium	Cadmium	2	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected over the last 7.5 years.
Group 1	Ocklawaha	Lake Harris Unit	LAKE BLUE SPRINGS	2838C	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Ocklawaha	Lake Harris Unit	HOLIDAY SPRINGS	2838D	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Ocklawaha	Lake Harris Unit	HOLIDAY SPRINGS	2838D	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Needed. EPA accepted DO delisting of this water in the 2003 Decision Document, based on an independent data review which supported natural conditions <5 mg/L DO. Current DEP analysis continues to support 4C status.
Group 1	Ocklawaha	Marshall Swamp Unit	OCKLAWAHA RIVER ABOVE DAISY	2740D		Iron	2	2	Delisting Accepted. Independent data review confirmed no samples above 1000 ug/L in an adequate sample set collected within the last 7.5 years. Data set meets IWR delisting requirements; number of samples not meeting criterion does not exceed that allowed under 62-303.720(2).
Group 1	Ocklawaha	Marshall Swamp Unit	LAKE WEIR OUTLET	2790		Nutrients (Chlorophyll-a)	2	2	Delisting Accepted. Original cycle 1 listing was flawed and inapplicable, as it was based on the consideration of data which cannot be used for regulatory proceedings under Florida law, due to systematic errors.
Group 1	Ocklawaha	Orange Creek	HATCHET CREEK	2688	Iron	Iron	2	4a	Delisting Accepted: An iron TMDL for this water was approved on 9-30-03.
Group 1	Ocklawaha	Orange Creek	LITTLE HATCHET CREEK	2695		Dissolved Oxygen	2	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. EPA understands that DEP intends to adopt this change to the delist list, and submit this water for inclusion on the 303(d) List as IR category 4d, in December 2009. In the interim, EPA will add this water to the 303(d) List.
Group 1	Ocklawaha	Orange Creek	HOGTOWN CREEK	2698	Coliforms	Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 9-30-03.
Group 1	Ocklawaha	Orange Creek	NEWNANS LAKE OUTLET	2705		Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-30-03.

Group 1	Ocklawaha	Rodman Reservoir Unit	OCKLAWAHA RIVER ABOVE LAKE OCKLAWAHA	2740C	Cadmium	Cadmium	2	2	Delisting Accepted: Independent data review confirmed no exceedances in a considerable sample set for 2740C collected over the last 7.5 years. No current evidence of impairment in other parts of 2740C, as listed in 1998; these will be assessed appropriately in future cycles.
Group 1	Ocklawaha	Rodman Reservoir Unit	OCKLAWAHA RIVER ABOVE LAKE OCKLAWAHA	2740C	Lead	Lead	2	2	Delisting Accepted: Independent data review confirmed no samples above 8.5 ug/L in a considerable sample set collected for 2740C over the last 7.5 years. No current evidence of impairment in other parts of 2740C, as listed in 1998; these will be assessed appropriately in future cycles.
Group 1	Ocklawaha	Rodman Reservoir Unit	OCKLAWAHA RIVER ABOVE LAKE OCKLAWAHA	2740C	Selenium	Selenium	2	2	Delisting Accepted: Independent data review confirmed no samples above 5 ug/L in a considerable sample set for 2740C collected over the last 7.5 years. No current evidence of impairment in other parts of 2740C, as listed in 1998; these will be assessed appropriately in future cycles.
Group 1	Ocklawaha	Rodman Reservoir Unit	DAISY CREEK	2769	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 1	Suwannee	Econfina	ECONFINA RIVER	3402	Cadmium	Cadmium	2	2	Delisting Accepted: Independent data review confirmed no exceedances in an adequate sample set for 3402 collected over the last 7.5 years.
Group 1	Suwannee	Fenholloway	FENHOLLOWAY AT MOUTH	3473A	Nutrients	Nutrients (Chlorophyll-a)	2	2	Delisting In Error. DEP included this water on the final Verified List for nutrients, so it is being added to the 303(d) List. EPA understands that DEP intends to adopt this change to the delist list in December 2009.
Group 1	Suwannee	Fenholloway	ROCKY CREEK	3489	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed no samples above 400 CFU in an adequate sample set collected within the last 7.5 years.
Group 1	Suwannee	Fenholloway	ROCKY CREEK	3489	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review confirmed no samples above 29 NTU in an adequate sample set collected within the last 7.5 years.
Group 1	Suwannee	Middle Suwannee	ALLEN MILL POND	3525	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Suwannee	Middle Suwannee	ALLEN MILL POND	3525	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Suwannee	Santa Fe River	NEW RIVER	3506A		Turbidity	2	2	Delisting Accepted. Independent data review confirmed number of samples above 30.9 NTU (29 NTU + a natural background turbidity of 1.9 NTU) is below the threshold of impairment in an adequate sample set collected within the last 7.5 years.
Group 1	Suwannee	Santa Fe River	ICHETUCKNEE HEAD SPRING	3519Z	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Suwannee	Santa Fe River	FIVEMILE CREEK	3578	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. EPA understands that DEP intends to adopt this change to the delist list, and submit this water for inclusion on the 303(d) List as IR category 4d, in December 2009. In the interim, this water will remain on the 303(d) List in IR category 3c.
Group 1	Suwannee	Santa Fe River	FIVEMILE CREEK	3578	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Suwannee	Santa Fe River	LAKE ROWELL	3598B	Nutrients	Nutrients (TSI)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Suwannee	Santa Fe River	SANTA FE RIVER	3605B	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review of a considerable sample set collected for DO over the last 7.5 years confirmed that water quality does not indicate DO impairment.
Group 1	Suwannee	Santa Fe River	HAMPTON LAKE	3635A	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Accepted: Independent data review of an adequate sample set collected for DO over the last 7.5 years confirmed that water quality in 3635A does not indicate DO impairment.
Group 1	Suwannee	Santa Fe River	ROCKY CREEK	3641	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed no samples above 400 CFU in an adequate sample set collected within the last 7.5 years.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Suwannee	Santa Fe River	ROCKY CREEK	3641	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Suwannee	Santa Fe River	ROCKY CREEK	3641	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. EPA understands that DEP intends to adopt this change to the delist list, and submit this water for inclusion on the 303(d) List as IR category 4d, in December 2009. In the interim, this water will remain on the 303(d) List in IR category 3c.
Group 1	Suwannee	Steinhatchee	STEINHATCHEE RIVER	3573B	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review of an adequate sample set collected for DO over the last 7.5 years confirmed that water quality does not indicate DO impairment.
Group 1	Suwannee	Upper Suwannee	SWIFT CREEK	3375	Total Suspended Solids (TSS)	Total Suspended Solids	2	2	Delisting Not Needed. EPA approved TSS delisting for this water, based on turbidity data, in 2003. Independent data review of current data set confirmed that the water continues to meet WQS.
Group 1	Suwannee	Upper Suwannee	DEEP CREEK	3388	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Needed. EPA accepted DO delisting of this water in the 2003 Decision Document, based on an independent data review which supported natural conditions.
Group 1	Suwannee	Upper Suwannee	ROARING CREEK	3392	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Suwannee	Upper Suwannee	ROARING CREEK	3392	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Needed. EPA accepted DO delisting of this water in the 2003 Decision Document, based on an independent data review which supported natural conditions. DEP is submitting this water for inclusion on the 303(d) List, as IR category 4d, in 2009.
Group 1	Suwannee	Upper Suwannee	CAMP BRANCH	3401	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Needed. EPA accepted DO delisting of this water in the 2003 Decision Document, based on an independent data review which supported natural conditions. DEP is submitting this water for inclusion on the 303(d) List, as IR category 4d, in 2009.
Group 1	Suwannee	Upper Suwannee	FALLING CREEK	3477	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Needed. EPA accepted DO delisting of this water in the 2003 Decision Document, based on an independent data review which supported natural conditions.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Suwannee	Waccasassa River	HORSEHOLE CREEK	3703	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 1	Suwannee	Waccasassa River	LITTLE WACCASASSA RIVER	3747	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. EPA understands that DEP intends to adopt this change to the delist list, and submit this water for inclusion on the 303(d) List as IR category 4d, in December 2009. In the interim, this water will remain on the 303(d) List in IR category 3c.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	SIXMILE CREEK	1536B	BOD	BOD	2	2	Delisting Accepted. Independent data review of an adequate sample set collected for DO over the last 7.5 years confirmed that water quality does not indicate DO impairment. Standard for BOD linked to DO impairment.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	SIXMILE CREEK	1536B	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review of an adequate sample set collected for DO over the last 7.5 years confirmed that water quality does not indicate DO impairment.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	SIXMILE CREEK	1536B	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review of a small sample set collected over the last 7.5 years, providing adequate information to support a finding that the water is not impaired for fecal coliform (only 2 of 18 samples exceeded the WQS).
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	SIXMILE CREEK	1536B	Turbidity	Turbidity	2	2	Delisting Not Accepted. Insufficient data to assess in the verified or planning periods. This water will remain on the 303(d) List in IR category 3c.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	PALM RIVER	1536E	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed that the number of samples above 400 CFU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	BLACK POINT CHANNEL	1637	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review of an adequate sample set collected for DO over the last 7.5 years confirmed that water quality does not indicate DO impairment.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	YBOR CITY DRAIN	1584A	Total Suspended Solids (TSS)	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification. (See also analysis for cycle 1 delisting request.)

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	YBOR CITY DRAIN	1584A	Nutrients	N/A (Nutrients)	1	(none)	Delisting not needed. This delisting appears on the Group 2 cycle 1 Tampa Bay Tributaries Delist List. However, EPA previously acted on, and disapproved, this Group 1 cycle 1 delisting in 2003, so it remains on the 1998 303(d) List, and should be assessed as 3c. Current data continues to support listing. Water discharges into, and is tidally connected to, Bay.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	YBOR CITY DRAIN	1584A	Total Suspended Solids	N/A (TSS)	1	(none)	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification. (See also analysis for cycle 2 delisting request.)
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	YBOR CITY DRAIN	1584A	BOD	N/A (BOD)	1	(none)	Delisting not needed. This delisting appears on the Group 2 cycle 1 Tampa Bay Tributaries Delist List. However, EPA previously acted on, and disapproved, this Group 1 cycle 1 delisting in 2003, so it remains on the 1998 303(d) List, and should be assessed as 3c. Current data continues to support listing. Water discharges into, and is tidally connected to, Bay.
Group 1	Tampa Bay	Coastal Hillsborough Bay Tributary	YBOR CITY DRAIN	1584A	COD	N/A (COD)	1	(none)	Delisting not needed. This delisting appears on the Group 2 cycle 1 Tampa Bay Tributaries Delist List. However, EPA previously acted on, and disapproved, this Group 1 cycle 1 delisting in 2003, so it remains on the 1998 303(d) List, and should be assessed as 3c. Current data continues to support listing. Water discharges into, and is tidally connected to, Bay.
Group 1	Tampa Bay	Coastal Lower Tampa Bay Tribut	BISHOP HARBOR	1797B	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 1	Tampa Bay	Coastal Middle Tampa Bay Tribu	COFFEEPOT BAYOU	1700	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed that the number of samples above 400 CFU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 1	Tampa Bay	Coastal Middle Tampa Bay Tribu	BIG BAYOU - BASIN W	1709	Nutrients	Nutrients (Historic Chlorophyll-a)	2	2	Delisting not needed. EPA accepted DEP's delisting of 1709 for nutrients and DO in the 2003 Decision Document, based on low chlorophyll, DO attainment and no evidence of imbalance in flora and fauna. Control strategies implemented by Tampa Bay partnership can reasonably be expected to maintain water quality in these coastal inlets. 1709 now consists of only a portion of the water identified in 1998, but other portions of the 1998-listed water have been appropriately assessed in the currrent cycle.
Group 1	Tampa Bay	Coastal Old Tampa Bay Tributary	LAKE TARPON OUTLET	1486		Dissolved Oxygen	2	2	Delisting not needed. EPA review of the 1998 303(d) List and EPA's 2003 Decision Document for the 2002 Update indicates that only Lake Tarpon Canal (1541A & 1541B) was included on the 1998 303(d) List, and that DEP subsequently verified Lake Tarpon (1486A) for DO in 2002. Lake Tarpon Outlet (1486) does not appear to have been included in either listing, and so does not require delisting.
Group 1	Tampa Bay	Coastal Old Tampa Bay Tributary	ROCKY CREEK	1507	Total Suspended Solids (TSS)	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was well below the threshold for verification.
Group 1	Tampa Bay	Coastal Old Tampa Bay Tributary	ALLIGATOR LAKE	1574A	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed that the number of samples above 400 CFU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 1	Tampa Bay	Coastal Old Tampa Bay Tributary	DIRECT RUNOFF TO BAY (ROOSEVELT BASIN MARINE)	1624	Un-ionized Ammonia	Un-ionized Ammonia	2	2	Delisting Accepted. Flaw in original analysis confirmed. Salinity occasionally ranges as high as 20-30. No numeric criterion for un-ionized ammonia in marine waters.
Group 2	Apalachicola - Chipola	Apalachicola Bay	Apalachicola Bay	1274	Nutrients	Nutrients (Chla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Apalachicola - Chipola	Apalachicola Bay	Apalachicola Bay	1274B	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Apalachicola - Chipola	Apalachicola Bay	Apalachicola Bay	1274B	Nutrients	Nutrients (Chla)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Apalachicola - Chipola	Apalachicola River	Apalachicola River	375E	Coliforms	Total Coliform	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Apalachicola - Chipola	Apalachicola River	Apalachicola River	375E	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that data for the planning period was below the threshold for verification in an adequate sample set (20 samples).
Group 2	Apalachicola - Chipola	Apalachicola River	Flat Creek	487	Total Suspended Solids	Turbidity	1	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Apalachicola - Chipola	Apalachicola River	Flat Creek	487	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Apalachicola - Chipola	Apalachicola River	Equiloxic Creek	1109A	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold for minimum sample set which includes available data collected within the last 7.5 years.
Group 2	Apalachicola - Chipola	Apalachicola River	Mosquito Creek Upper Segment	376		Fecal Coliform	2	3b	Delisting not Accepted. The data which supported cycle 1 verification of 376 was collected from the Class 3F waters which comprised most of this water, as defined in 2002. Post-2002 division of this water into a small, central Class I area (376), and a surrounding Class 3F drainage area (376A), resulted in reassignment of all available data to 376A. Florida is verifying 376A for fecal coliform, based on assessment of that data. No data is now available to assess 376, but the impaired status of the surrounding drainage area provides evidence that 376 could be impaired. EPA cannot support delisting of 376 until data is available to confirm that this Class I area has not been adversely impacted by the surrounding impaired drainage area. EPA will add this water to the 303(d) List.
Group 2	Apalachicola - Chipola	Apalachicola River	Flat Creek	487	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Apalachicola - Chipola	Apalachicola River	Sweetwater Creek	728	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected in the last 7.5 years.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Apalachicola - Chipola	Apalachicola River	Little Gully Creek	1039	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review found number of exceedances in a small sample set sufficiently low to support an assessment of attainment.
Group 2	Apalachicola - Chipola	Apalachicola River	Little Gully Creek	1039	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review found number of exceedances in a small sample set sufficiently low to support an assessment of attainment.
Group 2	Apalachicola - Chipola	Apalachicola River	Gregory Mill Creek	1135	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Apalachicola - Chipola	Apalachicola River	Gregory Mill Creek	1135	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Apalachicola - Chipola	Apalachicola River	Gregory Mill Creek	1135	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review found number of exceedances in a small sample set sufficiently low to support an assessment of attainment.
Group 2	Apalachicola - Chipola	Apalachicola River	Horseshoe Creek	1272	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Apalachicola - Chipola	Apalachicola River	Huckleberry Creek	1286	Coliforms	Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 3-17-05.
Group 2	Apalachicola - Chipola	Apalachicola River	Equiloxic Creek	1109A	Dissolved Oxygen	Dissolved Oxygen	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Apalachicola - Chipola	Apalachicola River	Glen Julia Spring	393Z	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an adequate sample set collected in the last 7.5 years.
Group 2	Apalachicola - Chipola	Apalachicola River	Glen Julia Spring	393Z	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Apalachicola - Chipola	Chattahoo River/Lake Seminole	Lake Seminole	60	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Apalachicola - Chipola	Chattahoo River/Lake Seminole	Lake Seminole	60		Mercury (based on fish consumption advisory)	2	2	Delisting Accepted. Fish tissue concentration of 0.19 mg/kg is below the concentration needed to establish the equivalent of a limited consumption advisory (i.e. 1 meal/week for the general population or 1 meal/month for sensitive groups)

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Charlotte Harbor	Lemon Bay	ALLIGATOR CREEK	2030	NUTRIENTS	NUTRIENTS (CHLA)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	Charlotte Harbor	Lemon Bay	CORAL CREEK (EAST BRANCH)	2078B	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting not accepted. Exclusion of some data based on systematic errors and QA issues leaves insufficient data to assess. Given potential impairment identified in cycle 1, water should remain listed until sufficient data is available. EPA understands that DEP intends to adopt this change to the delist list in December 2009. This water will remain on the 303(d) List for nutrients in IR category 3c.
Group 2	Charlotte Harbor	Lemon Bay	LEMON BAY	1983A	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Charlotte Harbor	Pine Island	MATLACHA PASS	2065F	NUTRIENTS	NUTRIENTS (CHLA)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Lower St. Johns	Black Creek	DOCTORS LAKE	2389	CADMIUM	CADMIUM	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	DOCTORS LAKE	2389	COLIFORMS	FECAL COLIFORMS	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in the most recent adequately-sized data set for the Period of Record.
Group 2	Lower St. Johns	Black Creek	DOCTORS LAKE	2389	COLIFORMS	TOTAL COLIFORMS	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Lower St. Johns	Black Creek	DOCTORS LAKE	2389	DISSOLVED OXYGEN	DISSOLVED OXYGEN	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	DOCTORS LAKE	2389	LEAD	LEAD	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Lower St. Johns	Black Creek	GROG BRANCH	2407	DISSOLVED OXYGEN	DISSOLVED OXYGEN	1	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Lower St. Johns	Black Creek	SWIMMING PEN CREEK	2410	CADMIUM	CADMIUM	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	SWIMMING PEN CREEK	2410	LEAD	LEAD	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	SWIMMING PEN CREEK	2410	TOTAL SUSPENDED SOLIDS	TOTAL SUSPENDED SOLIDS	1	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed exceedance rate well below verification threshold in a large sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	SWIMMING PEN CREEK	2410	ZINC	ZINC	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	BLACK CREEK	2415B	CADMIUM	CADMIUM	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	BLACK CREEK	2415B	IRON	IRON	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	BLACK CREEK S. FORK	2415C	IRON	IRON	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	BLACK CREEK S.FORK	2415C	NUTRIENTS	NUTRIENTS (CHLA)	1	2	Delisting Accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. DEP has also concluded that nutrients are not contributing to dissolved oxygen impairment, and is delisting this water for dissolved oxygen. However, EPA is adding this water to the 303(d) List for dissolved oxygen, with nutrients identified as the causative pollutant. This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a). (See also, EPA analysis for cycle 2 delisting.)
Group 2	Lower St. Johns	Black Creek	PETERS CREEK	2444	CADMIUM	CADMIUM	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Black Creek	PETERS CREEK	2444	COLIFORMS	FECAL COLIFORMS	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for fecal coliforms in cycle 2.

Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Lower St. Johns	North Mainstem Unit	POTTSBURG CREEK	2265B	TURBIDITY	TURBIDITY	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	North Mainstem Unit	GOODBYS CREEK	2326	NUTRIENTS	NUTRIENTS (CHLA)	1	2	Delisting accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. However, DEP has also verified this water for DO in cycles 1 & 2, relating nutrients to that impairment (TP was identified as a causative pollutant in cycle 1). This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Lower St. Johns	North Mainstem Unit	CLAPBOARD CREEK	2188	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Lower St. Johns	North Mainstem Unit	CEDAR POINT CREEK	2205B	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Lower St. Johns	North Mainstem Unit	CEDAR POINT CREEK	2205B	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE MOUTH	2213A		Nickel	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE MOUTH	2213A		Nutrients (Historic Chlorophyll-a)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-23-08.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE ICWW	2213B		Copper	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Independent data review confirmed few exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE ICWW	2213B		Nickel	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE ICWW	2213B		Nutrients (Historic Chlorophyll-a)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-23-08.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE DAMES POINT	2213C		Nickel	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE DAMES POINT	2213C	Nutrients	Nutrients (Historic Chlorophyll-a)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-23-08.
Group 2	Lower St. Johns	North Mainstem Unit	ST JOHNS RIVER ABOVE TROUT RIVER	2213D		Copper	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Independent data review confirmed few exceedances in an adequate sample set collected within the last 7.5 years.

Group 2	Lower St. Johns	Ortega River	WILLS BRANCH (NORTH PRONG)	2282	Copper	Copper	2	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected in the last 7.5 years.
Group 2	Lower St. Johns	Ortega River	WILLS BRANCH (NORTH PRONG)	2282	Total Suspended Solids	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Ortega River	WILLS BRANCH (NORTH PRONG)	2282	Turbidity	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Ortega River	BUTCHER PEN CREEK	2322	Total Suspended Solids	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Ortega River	BUTCHER PEN CREEK	2322	Turbidity	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Sixmile Creek	SIXMILE CREEK	2411	LEAD	LEAD	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Lower St. Johns	Sixmile Creek	SIXMILE CREEK	2411	NUTRIENTS	NUTRIENTS (CHLA)	1	3b	Delisting accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients as 'unassessed'. However, EPA also understands that DEP intends to submit dissolved oxygen, relating nutrients to that impairment, for inclusion on the 303(d) List in category 4d, in December 2009. In the interim, EPA is not accepting delisting of this water for dissolved oxygen. Therefore, this water will remain on the 303(d) list for nutrients pursuant to 62-302.530(47)(a). (See also, EPA analysis for cycle 2 delisting.)
Group 2	Lower St. Johns	Sixmile Creek	MILL CREEK	2460	COLIFORMS	FECAL COLIFORMS	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for fecal coliforms in cycle 2.
Group 2	Lower St. Johns	Sixmile Creek	MILL CREEK	2460	COLIFORMS	TOTAL COLIFORMS	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Lower St. Johns	Sixmile Creek	MILL CREEK	2460	IRON	IRON	1	3c	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Based on final cycle 2 assessment category 3c, this water remains on the 1998 303(d) List in IR category 3c.

Group 2	Lower St. Johns	South Mainstem Unit	ST JOHNS RIVER ABOVE RICE CREEK	2213M		Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-23-08.
Group 2	Lower St. Johns	South Mainstem Unit	ST JOHNS RIVER ABOVE DUNNS CREEK	2213N		Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-23-08.
Group 2	Lower St. Johns	South Mainstem Unit	WEST RUN INTERCEPTER D	2569	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Lower St. Johns	Trout River	TROUT RIVER	2203A	CADMIUM	CADMIUM	1	2	Delisting Accepted. 0/16 exceedances in verified period, so minimum sample set required by IWR would have exceedance rate below verification threshold. Available results consistently well below criterion.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Lower St. Johns	Trout River	TROUT RIVER	2203A	NUTRIENTS	NUTRIENTS (CHLA)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Lower St. Johns	Trout River	LITTLE TROUT RIVER	2206	NUTRIENTS	NUTRIENTS (CHLA)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	Lower St. Johns	Trout River	TROUT RIVER (MIDDLE REACH)	2203	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Lower St. Johns	Trout River	TROUT RIVER (LOWER REACH)	2203A	Nutrients	Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Middle St. Johns	Deep Creek Unit MSJR	Lake Harney	2964A	Cadmium	Cadmium	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Deep Creek Unit MSJR	St Johns River Above Lake Jesup	2893F		Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Middle St. Johns	Deep Creek Unit MSJR	Deep Creek / Lake Ashby Canal	2925	Cadmium	Cadmium	2	2	Delisting Accepted. Independent data review confirmed one exceedance in an adequate sample set collected in the last 7.5 years.
Group 2	Middle St. Johns	Deep Creek Unit MSJR	Deep Creek / Lake Ashby Canal	2925	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Insufficient samples in VP. However, inclusion of samples collected after VP yields adequate-sized sample set (>20 samples) with exceedance rate below verification threshold.
Group 2	Middle St. Johns	Deep Creek Unit MSJR	Deep Creek / Lake Ashby Canal	2925	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Middle St. Johns	Deep Creek Unit MSJR	Deep Creek / Lake Ashby Canal	2925	Lead	Lead	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an adequate sample set collected in the last 7.5 years.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Middle St. Johns	Deep Creek Unit MSJR	Lake Winnemissett	2931		Lead	2	3b	Delisting not needed. Florida verified this water in cycle 1, but EPA did not take action to add this water to the 303(d) List. Following exclusion of data with QA issues in cycle 2, independent data review confirmed no evidence to support adding this water to the 303(d) List.
Group 2	Middle St. Johns	Econlockhatchee River	Econlockhatchee River	2991A	BOD	BOD	1	4c	Delisting Accepted. Median BOD is below screening level (181 BOD values, median 1.7 mg/l)
Group 2	Middle St. Johns	Econlockhatchee River	Econlockhatchee River	2991A	Dissolved Oxygen	Dissolved Oxygen	1	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. This water will remain on the 303(d) List for DO in IR category 3c.
Group 2	Middle St. Johns	Econlockhatchee River	Econlockhatchee River	2991A	Coliform Bacteria	Fecal Coliform Bacteria	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Econlockhatchee River	Econlockhatchee River	2991A	Nutrients	Nutrients (Chla)	1	2	Delisting Accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. DEP has also concluded that nutrients are not contributing to dissolved oxygen impairment, and is delisting this water for dissolved oxygen. However, EPA is adding this water to the 303(d) List for dissolved oxygen, with nutrients identified as the causative pollutant. This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).
Group 2	Middle St. Johns	Econlockhatchee River	Econlockhatchee River	2991A	Coliform Bacteria	Total Coliform Bacteria	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Middle St. Johns	Econlockhatchee River	Little Econlockhatchee River	3001	BOD	BOD	1	4c	Delisting Accepted. Median BOD is below screening value (196 BOD values, median 1 mg/L)
Group 2	Middle St. Johns	Econlockhatchee River	Little Econlockhatchee River	3001	Dissolved Oxygen	Dissolved Oxygen	1	4c	Delisting Not Accepted. Based on independent review, insufficient evidence of natural condition. This water will remain on the 303(d) List for DO in IR category 3c.

Group 2	Middle St. Johns	Econlockhatchee River	Little Econlockhatchee River	3001	Nutrients	Nutrients (Chla)	1	2	Delisting Accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. DEP has also concluded that nutrients are not contributing to dissolved oxygen impairment, and is delisting this water for dissolved oxygen. However, EPA is adding this water to the 303(d) List for dissolved oxygen, with nutrients identified as the causative pollutant. This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).
Group 2	Middle St. Johns	Econlockhatchee River	Little Econlockhatchee River	3001	Coliform Bacteria	Total Coliform Bacteria	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Middle St. Johns	Econlockhatchee River	Crane Strand Drain	3014	Nutrients	Nutrients (Chla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Middle St. Johns	Econlockhatchee River	Long Branch	3030	Nutrients	Nutrients (Chla)	1	3c	Delisting not needed. Cycle 1 Delisting no longer applicable. Based on final cycle 2 assessment category 3c, this water remains on the 1998 303(d) List in IR category 3c.
Group 2	Middle St. Johns	Econlockhatchee River	Long Branch	3030	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Econlockhatchee River	Econlockhatchee River	2991A	Lead	Lead	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an adequate sample set collected in the last 7.5 years.
Group 2	Middle St. Johns	Econlockhatchee River	Crane Strand Drain	3014		Biology	2	4a	Delisting Accepted. A DO and BOD TMDL for this water, which addressed biology, was approved on 1-3-07.
Group 2	Middle St. Johns	Econlockhatchee River	Crane Strand Drain	3014	Biochemical Oxygen Demand	Dissolved Oxygen	2	4a	Delisting Accepted: A BOD/DO TMDL for this water was approved on 1-3-07.
Group 2	Middle St. Johns	Econlockhatchee River	Crane Strand Drain	3014		Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 1-4-07.
Group 2	Middle St. Johns	Econlockhatchee River	Crane Strand	3023		Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 1-4-07.
Group 2	Middle St. Johns	Econlockhatchee River	Long Branch	3030	Biochemical Oxygen Demand	Dissolved Oxygen	2	4a	Delisting Accepted: A BOD/DO TMDL for this water was approved on 1-3-07.
Group 2	Middle St. Johns	Econlockhatchee River	Long Branch	3030	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Middle St. Johns	Lake Jesup	Soldier Creek Reach	2986	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Lake Jesup	Soldier Creek Reach	2986	Nutrients	Nutrients (Chla)	1	2	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Middle St. Johns	Lake Jesup	Gee Creek	2994A	Nutrients	Nutrients (Chla)	1	2	Delisting Accepted. Available data confirms attainment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. Biological assessment data confirms that nutrients are not causing an imbalance in flora or fauna.
Group 2	Middle St. Johns	Lake Jesup	Lake Jesup	2981	Nutrients	Nutrients (TSI)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 1-9-07.
Group 2	Middle St. Johns	Lake Jesup	Lake Jesup	2981	Un-ionized Ammonia	Un-ionized Ammonia	2	4a	Delisting Accepted. A nutrient and un-ionized Ammonia TMDL for this water was approved on 1-9-07.
Group 2	Middle St. Johns	Lake Jesup	Chub Creek	2985		Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Middle St. Johns	Lake Jesup	Soldier Creek Reach	2986	Lead	Lead	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an adequate sample set collected in the last 7.5 years.
Group 2	Middle St. Johns	Lake Jesup	Salt Creek	2990		Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Middle St. Johns	Lake Jesup	Gee Creek	2994A	Lead	Lead	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an adequate sample set collected in the last 7.5 years.
Group 2	Middle St. Johns	Lake Monroe Unit	St. Johns River Above Wekiva River	2893C	Dissolved Oxygen	Dissolved Oxygen	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for DO in cycle 2.
Group 2	Middle St. Johns	Lake Monroe Unit	St. Johns River Above Wekiva River	2893C	Lead	Lead	1	2	Delisting Accepted. VP = 0/4; however, inclusion of last two years of PP preceding VP provides adequate sample set with no exceedances.
Group 2	Middle St. Johns	Lake Monroe Unit	St. Johns River Above Wekiva River	2893C	Total Suspended Solids	Turbidity	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Lake Monroe Unit	Lake Monroe	2893D	Lead	Lead	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Lake Monroe Unit	Lake Monroe	2893D	Selenium	Selenium	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Middle St. Johns	Lake Monroe Unit	Lake Monroe	2893D	Un-Ionized Ammonia	Un-Ionized Ammonia	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Lake Monroe Unit	Smith Canal	2962	Nutrients	Nutrients (Chla)	1	3c	Delisting not needed. Cycle 1 Delisting no longer applicable. Based on final cycle 2 assessment category 3c, this water remains on the 1998 303(d) List in IR category 3c.
Group 2	Middle St. Johns	Lake Monroe Unit	Smith Canal	2962	Coliform Bacteria	Total Coliform Bacteria	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Middle St. Johns	Lake Monroe Unit	Lake Jesup Near St. Johns River	2981A	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Lake Monroe Unit	Smith Canal	2962	Iron	Iron	2	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Middle St. Johns	Lake Monroe Unit	Smith Canal	2962	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Lake Monroe Unit	Deforest Lake	2973F		Nutrients (TSI)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Middle St. Johns	Lake Monroe Unit	Lake Jesup Near St Johns River	2981A	Nutrients	Nutrients (TSI)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 1-9-07.
Group 2	Middle St. Johns	Lake Woodruff Unit	St. Johns River Above Lake George	2893Z	Dissolved Oxygen	Dissolved Oxygen	1	4d	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Based on final cycle 2 assessment category 4d, DEP is submitting this water for inclusion on the 303(d) List.
Group 2	Middle St. Johns	Lake Woodruff Unit	St. Johns River Above Lake George	2893Z	Nutrients	Nutrients (Chla)	1	3b	Delisting accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients as 'unassessed'. However, DEP has submitted nutrients, related to DO impairment, for inclusion on the 303(d) List in category 4d. Therefore, this water will remain on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).
Group 2	Middle St. Johns	Lake Woodruff Unit	St. Johns River Above Lake George	2893Z	Total Suspended Solids	Turbidity	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.

Group 2	Middle St. Johns	Wekiva River	Black Water Creek	2929A	Cadmium	Cadmium	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Wekiva River	Black Water Creek	2929A	Dissolved Oxygen	Dissolved Oxygen	1	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Middle St. Johns	Wekiva River	Black Water Creek	2929A	Iron	Iron	1	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 2	Middle St. Johns	Wekiva River	Black Water Creek	2929A	Lead	Lead	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Wekiva River	Black Water Creek	2929A	Nutrients	Nutrients (Chla)	1	2	Delisting Accepted. Available data confirms attainment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. Biological assessment data confirms that nutrients are not causing an imbalance in flora or fauna. (See also, EPA analysis for cycle 2 delisting.)
Group 2	Middle St. Johns	Wekiva River	Black Water Creek	2929A	Selenium	Selenium	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Wekiva River	Black Water Creek	2929A	Zinc	Zinc	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Wekiva River	Wekiva Spring (Orange)	2956C	Nutrients	Nutrients (Chla)	1	4a	Delisting Accepted: A nutrient TMDL for this water was approved by EPA on 9-09-08. (See also analysis for Cycle 2 Delisting)
Group 2	Middle St. Johns	Wekiva River	Wekiva Spring (Orange)	2956C	Coliform Bacteria	Total Coliform Bacteria	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Middle St. Johns	Wekiva River	Rock Springs Run	2967	Nutrients	Nutrients (Chla)	1	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-9-08. (See also analysis for cycle 2 delisting)
Group 2	Middle St. Johns	Wekiva River	Little Wekiva River	2987	Nutrients	Nutrients (Chla)	1	2	Delisting Accepted. Available data confirms attainment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. Biological assessment data confirms that nutrients are not causing an imbalance in flora or fauna.
Group 2	Middle St. Johns	Wekiva River	Lake Prevatt	2993	Coliform Bacteria	Fecal Coliform Bacteria	1	3c	Delisting not needed. Cycle 1 Delisting no longer applicable. Based on final cycle 2 assessment category 3c, this water remains on the 1998 303(d) List in IR category 3c.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Middle St. Johns	Wekiva River	Lake Prevatt	2993	Nutrients	Nutrients (TSI)	1	3c	Delisting not needed. Cycle 1 Delisting no longer applicable. Based on final cycle 2 assessment category 3c, this water remains on the 1998 303(d) List in IR category 3c.
Group 2	Middle St. Johns	Wekiva River	Lake Prevatt	2993	Coliform Bacteria	Total Coliform Bacteria	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Middle St. Johns	Wekiva River	Little Wekiva Canal	3004	Coliform Bacteria	Total Coliform Bacteria	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Middle St. Johns	Wekiva River	Cowpen Pond	2934A		Mercury (Based on fish consumption advisory)	2	3a	Delisting Accepted. Flaw in original, cycle 1 analysis. There is no data for 2934A. However, 2723A (Cowpen Lake), which has a 2008 "Do Not Eat" advisory, should be verified and included on the 303(d) List.
Group 2	Middle St. Johns	Wekiva River	Wekiva River	2956		Nutrients (Other Information)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-9-08.
Group 2	Middle St. Johns	Wekiva River	Wekiva River	2956A		Nutrients (Other Information)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-9-08.
Group 2	Middle St. Johns	Wekiva River	Wekiwa Spring	2956C	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Wekiva River	Wekiwa Spring	2956C	Nutrients	Nutrients (Other Information)	2	4a	Delisting Accepted. A nutrient TMDL for this water was approved on 9-9-08. (See also analysis for Cycle 1 Delisting)
Group 2	Middle St. Johns	Wekiva River	Rock Springs Run	2967	Biochemical Oxygen Demand	Dissolved Oxygen	2	4c	Delisting Accepted. DO was measured at the spring vent, a natural condition. Median BOD is below screening level (26 BOD values, median 0.7 mg/l).
Group 2	Middle St. Johns	Wekiva River	Rock Springs Run	2967	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Middle St. Johns	Wekiva River	Rock Springs Run	2967	Nutrients	Nutrients (Other Information)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-9-08. (See also analysis for cycle 1 delisting)
Group 2	Middle St. Johns	Wekiva River	Little Wekiva River	2987	Coliforms	Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 9-9-08.
Group 2	Middle St. Johns	Wekiva River	Spring Lake	2987A		Nutrients (TSI)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-10-08.
Group 2	Middle St. Johns	Wekiva River	Lake Florida	2998A		Nutrients (TSI)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-10-08.
Group 2	Middle St. Johns	Wekiva River	Lake Orienta	2998C		Nutrients (TSI)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 9-10-08.

Independent data review confirmed exceedance rate below Verification threshold in an adequate sample set collected within the last 7.5 years.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	St. Lucie - Loxahatchee	C-25	Cowbone Creek (C-25)	3189	Dissolved Oxygen	Dissolved Oxygen	2	3a	Delisting not accepted. A DO TMDL was proposed for this water in 2006. 1998 listing was apparently based on data collected in the immediately adjacent 3160 - a much larger water which surrounds, and drains to, 3189. DEP verified 3160 for DO in 2009. Since 3160 drains to 3189, 3189 should remain listed until adequate data to assess becomes available. This water will remain on the 303(d) List in IR category 3c.
Group 2	St. Lucie - Loxahatchee	C-25	Cowbone Creek (C-25)	3189	Coliforms	Fecal Coliform	2	3a	Delisting accepted. A fecal coliform TMDL was established for this water 10-15-08. 1998 listing was apparently based on data collected in the immediately adjacent 3160 - a much larger water which surrounds, and drains to, 3189. However, as 3160 and 3189 both currently have insufficient data to assess for fecal coliforms under the IWR, and are prioritized for future sampling, EPA will accept delisting of 3189 for fecal coliforms.
Group 2	St. Lucie - Loxahatchee	C-25	Cowbone Creek (C-25)	3189	Nutrients	Nutrients (Chlorophyll-a)	2	3a	Delisting accepted. A nutrient TMDL was proposed for this water in 2006. 1998 listing was apparently based on data collected in the immediately adjacent 3160 - a much larger water which surrounds, and drains to, 3189. However, as 3160 and 3189 both currently have insufficient data to assess for nutrients under the IWR, and are prioritized for future sampling, EPA will accept delisting of 3189 for nutrients.
Group 2	St. Lucie - Loxahatchee	C-25	Cowbone Creek (C-25)	3189	Nutrients	Nutrients (Historic Chlorophyll-a)	2	3a	Delisting accepted. A nutrient TMDL was proposed for this water in 2006. 1998 listing was apparently based on data collected in the immediately adjacent 3160 - a much larger water which surrounds, and drains to, 3189. However, as 3160 and 3189 both currently have insufficient data to assess for nutrients under the IWR, and are prioritized for future sampling, EPA will accept delisting of 3189 for nutrients.
Group 2	St. Lucie - Loxahatchee	Coastal	MANATEE POCKET	3208	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	St. Lucie - Loxahatchee	Coastal	St. Lucie River	3193		Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 5-4-09.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	KITCHINGS CREEK	3224B	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	St. Lucie - Loxahatchee	Loxahatchee	KITCHINGS CREEK	3224B	Coliforms	Total Coliform	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	NW FORK LOXAHATCHEE	3226A	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	NW FORK LOXAHATCHEE	3226A	Nutrients	Nutrients (CHLA)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	SW FORK LOXAHATCHEE	3226C	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	SW FORK LOXAHATCHEE	3226C	Nutrients	Nutrients (CHLA)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	SW FORK LOXAHATCHEE	3226C	Coliforms	Total Coliform	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	C-18	3234	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	Loxahatchee River (North Fork)	3224A		Nutrients (Chlorophyll-a)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	St. Lucie - Loxahatchee	Loxahatchee	C-18	3234		Iron	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	St. Lucie - Loxahatchee	North St. Lucie	TENMILE CREEK	3194A	Nutrients	Nutrients (CHLA)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	St. Lucie - Loxahatchee	North St. Lucie	St. Lucie River (North Fork)	3194	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Accepted: A DO and Nutrient TMDL for this water was approved on 5-4-09.
Group 2	St. Lucie - Loxahatchee	North St. Lucie	St. Lucie River (North Fork)	3194	Nutrients	Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted: A DO and Nutrient TMDL for this water was approved on 5-4-09.

Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	SOUTH FORK ST. LUCIE	3210B	Nutrients	Nutrients (CHLA)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	BESSEY CREEK	3211	Coliforms	Total Coliform	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	St. Lucie River (South Fork)	3210		Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 5-4-09.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	St. Lucie Canal	3210A	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Accepted: A DO TMDL for this water was approved on 5-4-09.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	St. Lucie Canal	3210A	Nutrients	Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 5-4-09.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	St. Lucie River (South Fork)	3210B	Total Suspended Solids	Turbidity	2	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed number of exceedances in an extensive sample set collected within the last 7.5 years was well below Verification threshold.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	Bessey Creek	3211	Biochemical Oxygen Demand	Dissolved Oxygen	2	4a	Delisting Accepted: A DO TMDL for this water was approved on 5-4-09.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	Bessey Creek	3211	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Accepted: A DO TMDL for this water was approved on 5-4-09.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	Bessey Creek	3211	Coliforms	Fecal Coliform	2	2	Delisting Accepted. Independent data review confirmed few exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	St. Lucie - Loxahatchee	South St.Lucie -IRL	Bessey Creek	3211	Nutrients	Nutrients (Chlorophyll-a)	2	4a	Delisting Accepted: A nutrient TMDL for this water was approved on 5-4-09.
Group 2	Tampa Bay Tributaries	Alafia River	TURKEY CREEK ABOVE LITTLE ALAFIA	1578B	Nutrients	Nutrients (Chlorophyll)	1	5 -not VL	Delisting Not Needed. Cycle 1 Delisting no longer applicable, as water was assessed as impaired for nutrients in cycle 2. However, water needs to be included on the Verified List. In the interim, this water will remain on the 303(d) List for nutrients in IR category 3c.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Tampa Bay Tributaries	Alafia River	TURKEY CREEK ABOVE LITTLE ALAFIA	1578B	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	ALAFIA RIVER ABOVE HILLS.BAY	1621G	Coliforms	Coliforms (Fecal Coliform)	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	ALAFIA RIVER ABOVE HILLS.BAY	1621G	Coliforms	Coliforms (Total Coliform)	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Tampa Bay Tributaries	Alafia River	THIRTYMILE CREEK	1639	Coliforms	Coliforms (Total Coliform)	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Tampa Bay Tributaries	Alafia River	THIRTYMILE CREEK	1639	Coliforms	Coliforms (Fecal Coliform)	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	SOUTH PRONG ALAFIA RIVER	1653	Coliforms	Coliforms (Fecal Coliform)	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	SOUTH PRONG ALAFIA RIVER	1653	Nutrients	Nutrients (Chlorophyll)	1	2	Delisting accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. However, DEP has verified this water for inclusion the 303(d) List for dissolved oxygen, identifying nutrients (phosphorus) as the causative pollutant, and EPA is developing a nutrient TMDL for this water. This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).
Group 2	Tampa Bay Tributaries	Alafia River	POLEY CREEK	1583		Dissolved Oxygen	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Independent data review confirmed exceedance rate is just below Verification threshold in a large sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	POLEY CREEK	1583	Nutrients	Nutrients (Chlorophyll)	2	2	Delisting Accepted. Available data confirms attainment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. Biological assessment data confirms that nutrients are not causing an imbalance in flora or fauna.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Tampa Bay Tributaries	Alafia River	POLEY CREEK	1583	Turbidity	Turbidity	2	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	ALAFIA RIVER (NORTH PRONG)	1621E	Coliform	Fecal Coliform	2	2	Delisting Accepted. Independent data review found few exceedances (number below verification threshold) in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	BUCKHORN SPRING	1635	Nutrients	Nutrients (Chlorophyll)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Tampa Bay Tributaries	Alafia River	THIRTYMILE CREEK	1639	Dissolved Oxygen	Dissolved Oxygen	2	4a	Delisting Accepted: A DO TMDL for this water was approved on 12-20-05.
Group 2	Tampa Bay Tributaries	Alafia River	THIRTYMILE CREEK	1639	Nutrients	Nutrients (Chlorophyll)	2	4a	Delisting Accepted: A DO and nutrient TMDL for this water was approved on 12-20-05.
Group 2	Tampa Bay Tributaries	Alafia River	BELL CREEK	1660	Dissolved Oxygen	Dissolved Oxygen	2	2	Delisting Accepted. Independent data review confirmed exceedance rate well below Verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Alafia River	BELL CREEK	1660	Nutrients	Nutrients (Chlorophyll)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Tampa Bay Tributaries	Hillsborough River	BLACKWATER CREEK	1482	Coliform	Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 3-28-05.
Group 2	Tampa Bay Tributaries	Hillsborough River	TWO HOLE BRANCH	1489	Biochemical Oxygen Demand	Dissolved Oxygen	2	2	Delisting Accepted. Median BOD is at screening level (21 BOD values, median 2.0 mg/l).
Group 2	Tampa Bay Tributaries	Hillsborough River	TWO HOLE BRANCH	1489	Coliform	Fecal Coliform	2	3c	Delisting not needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Exclusion of cycle 1 data due to QA issues leaves sparse, recent dataset which does not support impairment. However, based on potential impairment identified in cycle 1, place in 3c to prioritize for future sampling.
Group 2	Tampa Bay Tributaries	Hillsborough River	FLINT CREEK	1522A	Coliform	Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 3-27-05.
Group 2	Tampa Bay Tributaries	Hillsborough River	LAKE THONOTOSASSA	1522B	Coliform	Fecal Coliform	2	2	Delisting Accepted. Independent data review found few exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Hillsborough River	BAKER CREEK	1522C	Coliform	Fecal Coliform	2	4a	Delisting Accepted: A fecal coliform TMDL for this water was approved on 3-27-05.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 2	Tampa Bay Tributaries	Hillsborough River	PEMBERTON CREEK	1542	Nutrients	Nutrients (Chlorophyll)	2	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Tampa Bay Tributaries	Hillsborough River	LAKE HUNTER	1543		Lead	2	3b	Delisting Accepted. Original cycle 1 listing was flawed and inapplicable, as it considered data with systematic errors. Exclusion of this data resulted in a data set which provides no evidence of impairment, but is insufficient to confirm attainment.
Group 2	Tampa Bay Tributaries	Hillsborough River	CYPRESS CREEK	1402	Coliforms	Coliforms (Fecal Coliform)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for fecal coliforms in cycle 2.
Group 2	Tampa Bay Tributaries	Hillsborough River	CYPRESS CREEK	1402	Nutrients	Nutrients (Chlorophyll)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	Tampa Bay Tributaries	Hillsborough River	NEW RIVER	1442	Nutrients	Nutrients (Chlorophyll)	1	5	Delisting Not Needed. Cycle 1 Delisting no longer applicable. Water verified for nutrients in cycle 2.
Group 2	Tampa Bay Tributaries	Hillsborough River	NEW RIVER	1442	Total Suspended Solids	Turbidity	1	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. 0/19 exceedances in verified period, so minimum sample set required by IWR would have exceedance rate below verification threshold. All but one result well below criterion.
Group 2	Tampa Bay Tributaries	Hillsborough River	NEW RIVER	1442	Turbidity	Turbidity	1	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. 0/19 exceedances in verified period, so minimum sample set required by IWR would have exceedance rate below verification threshold. All but one result well below criterion.
Group 2	Tampa Bay Tributaries	Hillsborough River	HILLSBOROUGH RIVER	1443A	Coliforms	Coliforms (Fecal Coliform)	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Hillsborough River	HILLSBOROUGH RIVER	1443A	Coliforms	Coliforms (Total Coliform)	1		Delisting Accepted. DEP/ERC removal of the total coliform criterion from Florida's water quality standards on 9-28-06 was approved by EPA on 5-4-07. DEP continues to assess this water for bacteriological impairment, based on comparison to fecal coliform criterion.
Group 2	Tampa Bay Tributaries	Hillsborough River	HILLSBOROUGH RIVER	1443A	Total Suspended Solids	Turbidity	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected within the last 7.5 years.
Group 2	Tampa Bay Tributaries	Hillsborough River	HILLSBOROUGH RIVER	1443B	Coliforms	Coliforms (Fecal Coliform)	1	2	Delisting Accepted. Independent data review confirmed exceedance rate below verification threshold in an adequate sample set collected within the last 7.5 years.

Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Tampa Bay Tributaries	Manatee River	MANATEE RIVER BELOW DAM	1848B		Nutrients (Chlorophyll)	2	3b	Delisting not needed. Florida verified this water in cycle 1, but EPA did not take action to add this water to the 303(d) List. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 2	Tampa Bay Tributaries	Manatee River	GAP CREEK	1899	Coliform	Fecal Coliform	2	2	Delisting Not Needed. Assessment supports not adding this waterbody-pollutant to the 303(d) List. Exclusion of cycle 1 data due to QA issues leaves sparse, recent dataset which does not support listing.
Group 2	Tampa Bay Tributaries	Manatee River	WARD LAKE	1914A		Nutrients (TSI)	2	3b	Delisting not needed. Florida verified this water in cycle 1, but EPA did not take action to add this water to the 303(d) List. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 5	Everglades	Everglades Agricultural Area	WEST PALM BEACH CANAL	3238	Unionized Ammonia	Unionized Ammonia	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 0.02 mg/L in an extensive sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	715 FARMS	3247	Total Suspended Solids (TSS)	Turbidity	1	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed that the small number of samples above 29 NTU in a large sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	715 FARMS	3247	Turbidity	Turbidity	1	2	Delisting Accepted. No criteria for TSS. Analyzed for turbidity. Independent data review confirmed that the small number of samples above 29 NTU in a large sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	N. NEW RIVER CANAL	3248	Total Suspended Solids (TSS)	Turbidity	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 29 NTU in a large sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	N. NEW RIVER CANAL	3248	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 29 NTU in a large sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	HILLSBORO CANAL	3248A	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	HILLSBORO CANAL	3248A	Unionized Ammonia	Unionized Ammonia	1	2	Delisting Accepted. Independent data review confirmed no samples above 0.02 mg/L in a large sample set collected within the last 7.5 years.
Group 5	Everglades	Everglades Agricultural Area	S-3	3251	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 29 NTU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	SOUTH BAY	3253	Unionized Ammonia	Unionized Ammonia	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 0.02 mg/L in a large sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Everglades	Everglades Agricultural Area	S-8	3260	Nutrients	Nutrients (Chla)	1	2	Delisting accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. However, DEP has also retained this water on the 303(d) List for dissolved oxygen, relating nutrients to that impairment. This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).

Group 5	Everglades	Everglades Agricultural Area	S-7	3263	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed no samples above 29 NTU in an extensive sample set collected for 3263 within the last 7.5 years.
Group 5	Everglades	Everglades Agricultural Area	HOLEY LAND	3263A	Nutrients	Nutrients (Chla)	1	2	Delisting accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. However, DEP has also retained this water on the 303(d) List for dissolved oxygen, relating nutrients to that impairment. This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).
Group 5	Everglades	Everglades National Park	ENP SHARK SLOUGH	3289	Iron	Iron	1	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 5	Everglades	Everglades National Park	ENP SHARK SLOUGH	3289	Nutrients	Nutrients (Chla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Everglades	Everglades National Park	ENP TAYLOR SLOUGH	3289K	Iron	Iron	1	2	Delisting Accepted. Based on independent review, water should be changed to 3F, in which case, existing data supports WQS (<1000 ug/L Fe).
Group 5	Indian River Lagoon	Banana River Unit	SYKES CREEK/BARGE CANAL	3044B	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of an extensive sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. The number of samples <4.0 ug/L in the sample set was well below the IWR threshold for verification.
Group 5	Indian River Lagoon	Mosquito Lagoon Unit	MOSQUITO LAGOON	2924B	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 43 CFU in an extensive sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Indian River Lagoon	North Central Indian River Lagoon	INDIAN RIVER ABOVE SEBASTIAN INLET	2963A	Cadmium	Cadmium	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected over the last 7.5 years.
Group 5	Indian River Lagoon	North Central Indian River Lagoon	INDIAN RIVER ABOVE SEBASTIAN INLET	2963A	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of an extensive sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. The number of samples <4.0 ug/L in the sample set was below the IWR threshold for verification.
Group 5	Indian River Lagoon	North Central Indian River Lagoon	INDIAN RIVER ABOVE SEBASTIAN INLET	2963A	Lead	Lead	1	2	Delisting Accepted. Independent data review confirmed that there were no samples above 8.5 ug/L in an adequate sample set collected within the last 7.5 years.

Group 5	Perdido	Perdido Bay	DIRECT RUNOFF TO BAY	991	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of an extensive sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. There were no samples <4.0 ug/L in the sample set.
Group 5	Perdido	Perdido River	BRUSHY CREEK	4	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of an extensive sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. The number of samples <4.0 ug/L in the sample set was well below the IWR threshold for verification.
Group 5	Perdido	Perdido River	BRUSHY CREEK	4	Turbidity	Turbidity	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 31.2 (29+2.2(background)) NTU in an extensive sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Perdido	Perdido River	BRUSHY CREEK	4	Total Suspended Solids (TSS)	Turbidity	1	2	Delisting Accepted. Independent data review confirmed that the small number of samples above 31.2 (29+2.2(background)) NTU in an extensive sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Perdido	Perdido River	PERDIDO RIVER	462A	Nutrients	Chlorophyll	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Perdido	Perdido River	PERDIDO RIVER	462A	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of an adequate sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. The number of samples <4.0 ug/L for the sample set was well below the IWR threshold for verification.
Group 5	Perdido	Perdido River	PERDIDO RIVER	462C	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 400 CFU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	SPRING BAYOU	1440A	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 400 CFU in an adequate sample set collected for 1440A within the last 7.5 years was below the threshold for verification.

US EPA ARCHIVE DOCUMENT

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	SOUTH BRANCH	1456	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 400 CFU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	SOUTH BRANCH	1456	Nutrients	Nutrients (Chlorophyll-a)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	HOLLIN CREEK	1475	Nutrients	Nutrients (Chlorophyll-a)	1	2	Delisting accepted. Independent review of available chlorophyll a annual means confirmed that water meets IWR criteria for delisting nutrients. However, DEP has verified this water for inclusion the 303(d) List for dissolved oxygen, identifying nutrients (phosphorus) as the causative pollutant. This water therefore remains on the 303(d) list for nutrients pursuant to 62-302.530(47)(a).
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	KLOSTERMAN BAYOU RUN TIDAL	1508	Un-ionized Ammonia	N/A	1	N/A	Delisting Accepted. Listing of the marine portion of this water in 1998 was flawed, as Florida nas no numeric criterion for un-ionized ammonia in marine waters. The freshwater portion of this 1998-listed water, now identified as 1508A will be appropriately assessed.
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	HEALTH SPRING DRAIN	1512	Nutrients	Nutrients (Chlorophyll-a and Historic Chlorophyll-a)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	SUTHERLAND BAYOU (SMITH CREEK)	1527	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of a large sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. The number of samples <5.0 ug/L for the sample set was well below the IWR threshold for verification.
Group 5	Springs Coast	Anclote River / Coastal Pinellas County	SUTHERLAND BAYOU (SMITH CREEK)	1527	Nutrients	Nutrients (Chlorophyll-a)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 5	Upper East Coast	Halifax River Unit	Halifax River	2363B	Nutrients	Nutrients (Chla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Upper East Coast	Halifax River Unit	Tomoka River	2634	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 400 CFU in an extensive sample set collected within the last 7.5 years was below the threshold for verification.
Group 5	Upper East Coast	Halifax River Unit	Tomoka River	2634	Iron	Iron	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 1000 ug/L in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 5	Upper East Coast	Halifax River Unit	Tomoka River	2634	Nutrients	Nutrients (Chla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Upper East Coast	Halifax River Unit	Tomoka River	2634A	Nutrients	Nutrients (Chla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Upper East Coast	Halifax River Unit	Tomoka River	2634A	Iron	Iron	1	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 5	Upper East Coast	Halifax River Unit	Rose Bay	2672	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 43 CFU in an adequate sample set collected within the last 7.5 years was below the threshold for verification.
Group 5	Upper East Coast	Halifax River Unit	Spruce Creek	2674	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of an adequate sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. The number of samples <5.0 ug/L for the sample set was below the IWR threshold for verification.

BASIN GROUP NUMBER	BASIN NAME	PLANNING UNIT	WATERBODY NAME	WBID	1998 303(d) PARAMETER OF CONCERN	2009 FDEP PARAMETER OF CONCERN	CYCLE	FINAL FDEP IR CATEGORY	EPA ANALYSIS & CONCLUSIONS
Group 5	Upper East Coast	Halifax River Unit	Spruce Creek	2674	Nutrients	Nutrients (Chla and Histchla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Upper East Coast	Halifax River Unit	Spruce Creek	2674	Iron	Iron	1	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 5	Upper East Coast	Halifax River Unit	Spruce Creek	2674A	Iron	Iron	1	4c	Delisting Accepted. Based on independent review, sufficient evidence of natural condition.
Group 5	Upper East Coast	Matanzas River Unit	St. Augustine Inlet	2363H	Coliforms	Fecal Coliform	1	2	Delisting Accepted, but may not be needed. This WBID does not appear to be included on the 1998 (303(d) List or the 2002 update to that list. Please clarify the basis for identifying 2362H as a listed water. Independent data review confirmed that there were no samples above 43 CFU in an extensive sample set collected within the last 7.5 years.
Group 5	Upper East Coast	Matanzas River Unit	St. Augustine Inlet	2363H	Nutrients	Nutrients (Chla)	1	3b	Delisting Accepted. Available data does not confirm impairment under the IWR. Chlorophyll levels are low, and nitrogen and phosphorus have not been confimed as pollutants. However, data does not confirm attainment. Water will therefore be considered unassessed until sufficient data to confirm nutrient attainment is available.
Group 5	Upper East Coast	Matanzas River Unit	Moultrie Creek	2493		Iron	1	4c	Delisting Not Needed. Water does not appear on 303(d) List. Based on independent review, sufficient evidence of natural condition.
Group 5	Upper East Coast	Pellicer Creek Unit	Palm Coast	2363D	Cadmium	Cadmium	1	2	Delisting Accepted. Independent data review confirmed no exceedances in an adequate sample set collected over the last 7.5 years.
Group 5	Upper East Coast	Pellicer Creek Unit	Palm Coast	2363D	Coliforms	Fecal Coliform	1	2	Delisting Accepted. Independent data review confirmed that the number of samples above 43 CFU in a large sample set collected within the last 7.5 years was well below the threshold for verification.
Group 5	Upper East Coast	Pellicer Creek Unit	Palm Coast	2363D	Dissolved Oxygen	Dissolved Oxygen	1	2	Delisting Accepted. Independent data review of a large sample set collected over the last 7.5 years confirmed that water quality does not indicate DO impairment. The number of samples <4.0 ug/L for the sample set was well below the IWR threshold for verification.
Group 5	Upper East Coast	Pellicer Creek Unit	Palm Coast	2363D	Lead	Lead	1	2	Delisting Accepted. Independent data review confirmed that there were no samples above 8.5 ug/L in an adequate sample set collected within the last 7.5 years.

FDEP's Rotating Basin Approach

In May 1999, the Florida Legislature enacted the Florida Watershed Restoration Act (FWRA) to clarify FDEP's statutory authority for TMDL development and to establish the processes for listing impaired waters and developing TMDLs. FDEP uses a watershed management approach, which is a program for managing the state's water resources on the basis of hydrologic units, as the framework for implementing the FWRA. The approach utilizes a process that rotates through the state's 52 basins over the following five-year phased cycle:

Phase 1: Initial Basin Assessment
Conduct preliminary assessments of water body health; develop a Planning List of potentially impaired waters using the methodology in Part II of Chapter 62-303, FAC; identify sources of pollution; develop a coordinated monitoring plan, focusing on waters on the Planning List; and produce a Basin Status Report.

Phase 2: Strategic Monitoring
Supplement existing data to further characterize basin conditions by: obtaining from monitoring entities existing data that are not currently in STORET and entering it into the Florida STORET database; monitoring waters on the 1998 303(d) list for which insufficient data are available to analyze the waters using the methods in Chapter 62-303, FAC; monitoring waters on the Planning List to verify potential impairment; conducting intensive survey monitoring to obtain data needed for TMDL development; producing a Basin Assessment Report that assesses all waters using the methodology in EPA's 2002 Integrated Water Quality Monitoring and Assessment Report Guidance; preparing a revised Planning List of potentially impaired waters; and adopting, using a public participation process, a Verified List of impaired waters that is submitted to EPA as a basin-specific 303(d) list that will update the state's 303(d) list.

Phase 3: Data Analysis and TMDL Development
Develop TMDLs for waters on the basin-specific Verified List of impaired waters in accordance with the schedule agreed to by EPA and FDEP; conduct a more detailed assessment of major pollutant sources, including the quantification of nonpoint source loadings; and, begin the development of the Basin Management Action Plan that will specify load reduction allocations and activities that will be undertaken to reduce loadings in order to meet the TMDL.

Phase 4: Basin Management Action Plan Development
Work with local stakeholders to develop a Basin Management Action Plan that specifies how established goals will be achieved by recommending management activities, establishing who is responsible for implementation, establishing a schedule for implementation, and noting how effectiveness of the plan will be assessed. While the

US EPA ARCHIVE DOCUMENT

plan will focus on implementation of TMDLs developed in the basin, it may also address more general watershed goals.

Phase 5: Basin Management Action Plan Implementation
Begin implementation of the Basin Management Action Plan and associated water resource protection and restoration efforts, including implementation of Best Management Practices, habitat protection and restoration activities, environmental infrastructure improvements, and issuance of NPDES permits.

At the conclusion of this cycle, the process begins anew so that all basins in the state are assessed every five years.

FDEP organized the state's 52 basins into 30 groups for assessment purposes. The groups were then organized as follows for the basin rotation cycle:

Group 1	Group 2	Group 3	Group 4	Group 5
St. Marks	Apalachicola/ Chipola	Choctawhatchee/St. Andrews	Pensacola	Perdido
Suwannee	Hillsborough/ Alafia/Manatee	Peace/Myakka/ Sarasota Bay	South Withlacoochee	Crystal River
Ocklawaha	Charlotte Harbor	Caloosahatchee	Southeast Coast - Biscayne Bay	Everglades
Tampa Bay	St. Lucie - Loxahatchee	Lake Worth Lagoon - Palm Beach Coast	Kissimmee River	Florida Keys
Everglades/ West Coast	Lower St. Johns	Lower St. Johns	Fisheating Creek	Upper East Coast
Lake Okeechobee	Upper St. Johns	Upper St. Johns	Nassau/St. Mary's	Middle East Coast/Indian River

The first basin rotation cycle began in July 2000 and is proceeding in accordance with the following schedule:

Group	July 2000	July 2001	July 2002	July 2003	July 2004	July 2005	July 2006	July 2007	July 2008
1	Phase 1	Phase 2	Phase 3	Phase 4	Phase 5	Phase 1	Phase 2	Phase 3	Phase 4
2		Phase 1	Phase 2	Phase 3	Phase 4	Phase 5	Phase 1	Phase 2	Phase 3
3			Phase 1	Phase 2	Phase 3	Phase 4	Phase 5	Phase 1	Phase 2
4				Phase 1	Phase 2	Phase 3	Phase 4	Phase 5	Phase 1
5					Phase 1	Phase 2	Phase 3	Phase 4	Phase 5

Appendix F

Assessing Ambient Data for Naturally Variable Parameters Against Numeric Water Quality Criteria

Water quality criteria for aquatic life are typically established for two intended levels of protection. The first level provides for survival over short periods of time and the second allows for organisms to live, grow, and reproduce in a given area over a longer period of time. Florida's water quality criteria provide the latter level of protection for their aquatic life uses.

EPA recognizes that all numeric water quality criteria have three elements: magnitude (e.g., how much), duration (e.g., how long at the specified magnitude), and frequency of exceedance (e.g., how often for the specified duration period), regardless of whether they are explicitly described in state water quality standards. A characterization of these three elements is essential to perform tasks such as the development of wasteload allocation for deriving permit limits. Often this is accomplished by identifying a "design flow" (e.g., the 7Q10 - lowest seven day average flow with a recurrence interval of ten years) to match an expression of criterion magnitude (e.g., a concentration) that accounts for allowable duration and frequency. Florida's water quality standards include numeric water quality criteria that are typically expressed as concentration values "not to be exceeded". As stated by Florida, this expression relates to their intended use for wasteload allocation purposes. Indeed, it is Florida's typical practice to establish permit limits that simply reflect the criterion magnitude (with or without an allowable mixing zone, where exceeding criteria for short periods of time and space is consistent with Florida water quality standards under certain circumstances).

In addition to serving as the basis for water quality-based pollutant source controls, water quality standards also function as the basis for assessing ambient water quality to determine if waters are impaired. Because the technical capability and resources for continuous monitoring are extremely rare, assessors typically rely on analytical chemistry measures of "grab samples" of surface waters taken at infrequent intervals of time over a period of years to serve as the data base for these determinations. These data do not allow a direct characterization of duration and frequency as typically expressed in water quality standards for purposes of wasteload allocation. These assessment data can be grouped and presented as data distributions that can subsequently be statistically compared to criteria magnitude values. The closest approximation of duration and frequency from this type of analysis is the percent of samples above a criterion magnitude. This could be further characterized as the "percent of time" a criterion magnitude is exceeded, provided the data are considered representative of ambient conditions over the assessment period.

US EPA ARCHIVE DOCUMENT

Many State water quality standards, including Florida's, do not explicitly specify an allowable percent of ambient measurement samples above numeric criteria magnitude values for determining impairment. The Florida statute that authorizes state development of water quality standards, however, directs Florida to establish and apply criteria in water quality standards recognizing the inherent natural and statistical variability (F.S. 403.021(11)). EPA believes that Florida has correctly interpreted its own statute to recognize natural and statistical variability when making determinations of impairment.

Statistical variability relates to an accounting for sampling and analytical error and other factors that confer uncertainty in the accuracy, precision, and representativeness of sample data to represent "true" conditions. Generally, the smaller the sample size, the greater the uncertainty that "true" conditions are accurately represented. Statistical variability can be mathematically expressed as a confidence level, and the desired confidence level is generally a risk management decision left to the discretion of the state in interpreting its available data for purposes of determining impairment. However, overwhelming evidence of gross impairment should not be masked by unreasonable expectations for statistical certainty.

Natural variability relates to the degree that conditions in nature vary as a function of time and space based on physical, chemical, biological, hydrological, and geomorphological factors. Pollutants and pollutant parameters can be placed into three distinct groups for considering the effects of natural variability. Some pollutants, such as chlorine and pesticides, are introduced solely as a function of anthropogenic activity and, although natural factors can mitigate or augment their effects, their presence cannot be attributed to natural conditions. The second group of pollutants usually occur naturally in the environment at low levels, such as copper and cadmium, but protective water quality criteria for these pollutants lie well above the typical range of solely natural occurrence. For this group, the natural contribution is likely negligible at measured levels above or near the water quality criterion. Natural variability is generally not a factor for consideration in evaluating ambient measurement samples that exceed water quality criterion magnitude values for these first two groups of pollutants. In contrast, the third group of pollutants or pollutant parameters have protective water quality criteria that lie within or near the range of naturally occurring conditions. This "naturally variable" group include pollutants or pollutant parameters such as dissolved oxygen, turbidity, bacteria, conductivity, and alkalinity. Natural variability is an appropriate and reasonable factor to consider in evaluating ambient data for this group of pollutants or pollutant parameters.

Dissolved oxygen (DO) is perhaps the best example of a naturally variable pollutant parameter. DO refers to the volume of oxygen that is contained in water, and is measured and expressed as a concentration (typically in mg/L). Oxygen arrives in surface water as a by-product of photosynthesis by aquatic plants and from transfer from the overlying air. DO solubility and, as a result, the

US EPA ARCHIVE DOCUMENT

expected ambient measured levels, are affected by temperature (colder water holds more oxygen), salinity (fresher water holds more oxygen), and altitude (lower pressure reduces solubility). DO levels are also affected by flow and stream channel or lake morphology (more turbulent or well-mixed water transfers more oxygen from the air at the water surface), degree of biological activity (plant and animal respiration deplete oxygen, especially at night), and the amount of naturally occurring organic matter (aerobic decomposition depletes oxygen). As a result, DO can change and vary in a single water body according to time of day, season, weather, temperature, depth and location of sampling, and flow. The variability across different waters is augmented by many of the factors described above. DO can range from 0-18 mg/L in natural water systems, with long-term levels set generally within 5-6 mg/L to support a diverse aquatic community in most warmwater systems, as reflected by Florida's water quality standards. Specific information concerning dissolved oxygen and other naturally variable pollutants can be found in textbooks such as *Water Quality: Prevention, Identification and Management of Diffuse Pollution* by Novotny and Olem (published by Van Nostrand Reinhold, 1994), *Limnology ine(second edition)* by Wetzel (published by Saunders College Publishing, 1983), and *Water Quality: Characteristics, Modeling, and Modification* by Tchobanoglous and Schroeder (published by Addison-Wesley Publishing Company, 1985). Information summaries and general information can be found at University web sites, including excellent ones on DO from North Carolina State University (http://h2osparc.wq.ncsu.edu/info/do.html and http://www.ncsu.edu/sciencejunction/depot/experiments/water/lessons/do/)

Although States have discretion in selecting a target for determining impairment of water quality standards, the State would need to justify why the target for an allowable number of ambient measurement samples to exceed a criterion magnitude for a naturally variable pollutant parameter is appropriate and reasonable and results in an acceptable 303(d) listing decision. Florida's choice of 10% is consistent with EPA's general recommendations for pollutant parameters of this type, and represents a reasonable choice for this application with respect to naturally variable pollutants and pollutant parameters, such as DO. Waters that are not listed as impaired, or are removed from the list of impaired waters, on this basis can reasonably be expected to achieve the intended level of protection expressed in Florida's water quality standards.

US EPA ARCHIVE DOCUMENT

Appendix G

FDEP Data Exclusion Screens

Removal of results reported in Florida STORET that did not include units, or included units that were inappropriate for the particular analyte: These were excluded as the results could not accurately be quantified, or relied upon for assessment purposes under the IWR.

Results reported as negative values: It was concluded that any results reporting a negative value for the substance analyzed represent reporting errors: Credible data could not have any values less than the detection limit (in all cases a positive value) reported. Therefore, results reported as negative values could not be relied upon for assessment purposes under the IWR.

Results reported as any of “888" "8888" "88888" "888888" "8888888" and "999" "9999" "99999" "999999" "9999999": Upon investigation, all data reported using these values were found to be provided by a particular Water Management District. The District intentionally coded the values in this manner to flag the fact that they should not be used, as the values reported from the lab were suspect. The data coded in this manner was generally older.

Removal of J-qualified Results: J-qualified results from this same Water Management District were excluded from the assessments after the District brought to the attention of FDEP that their use of the J-qualifier was not consistent with FDEP’s use of the FDEP J-qualifier.

Removal of extremely old USGS data (beginning of the previous century): This data did not have complete date information available. Accurate date information is required to be able to assess results under the IWR. USGS data using USGS parameter codes of 32230 or 32231 were also excluded from assessments performed under the IWR, based on information in a memo that was sent from USGS.

Removal of results for iron which were confirmed to be entered into dbHydro using the wrong legacy STORET parameter codes: These results were found to be reported by a particular Water Management District. They were excluded from the assessment under the IWR.

Removal of results reported using “K”, "U", "W", and "T" qualifier codes (all of which suggest that the result was below method detection limits) when the reported value of the mdl was greater than the criterion, or the mdl was not provided: In order to be able to compare a non-detect result to a criterion value, it is necessary to know that it was possible to measure as low as the numeric value of the criterion.

US EPA ARCHIVE DOCUMENT

Removal of certain results reported using an "l" qualifier code (meaning that the result value was between the method detection limit and the practical quantification limit): These results were excluded from assessments performed under the IWR, where the mdl was not provided, or where the mdls and pqls were inconsistent with the rest of the data record,.

Removal of certaion results reported for metals using an "I" qualifier code: Where the criteria is expressed as a function of hardness, and the numeric value of the metal criteria corresponding to the reported hardness value was between the mdl and the pql, these data were excluded from the assessments performed under the IWR.

Removal of results reported using an "L" qualifier code (meaning that the actual value is known to be greater than the reported value) where the reported value for the upper quantification limit was less than the criterion: The reasoning for excluding these data follows a logic somewhat similar to the reasoning to the cases discussed above for results reported as below the method detection limits.

Removal of results reported with a "Z" qualifier code (which indicates that the results were too numerous to count): These results were excluded because there was no consistency among data providers in how data using this qualifier code were reported: Some data providers entered numeric estimates of bacteria counts, while other data providers entered the dilution factor. As a result, meaningful interpretation of data reported using this qualifier was not uniformly possible.

Removal of results reported with an "F" qualifier code (which indicates female species): Since the IWR does not assess any analytes for which this qualifier code would be appropriate, the intended meaning of the use of this qualifier code is unknown. The reported result is therefore rendered uninterpretable (although there are very few instances of the use of this qualifier code in the IWR dataset, and it is possible that some agencies use this to indicate a field measurement).

Results reported with an "O" qualifier code (which indicates that the sample was collected but that the analysis was lost or not performed): Exclusion of results reported using this qualifier code is self-explanatory.

Removal of results reported with an "N" qualifier code (which indicates presumption of evidence of the presence of the analyte). Comparing concentrations of analytes to critieria from the Florida Standards requires a numeric result value: Presence or absence, for the purposes of assessments performed under the IWR, is not sufficient information upon which to base an impairment decision.

Removal of results reported with a "V" or "Y" qualifier code (which indicate the presence of analyte in both the environmental sample and the blank, or a laboratory analysis that was from an unpreserved or improperly preserved sample): Such data may not be accurate. Use of these codes indicates that the reported result is not sufficiently reliable to be used in IWR assessments.

US EPA ARCHIVE DOCUMENT

Removal of certain results reported with a "Q" qualifier code (which indicates that the holding time was exceeded): These data were reviewed to determine if the holding time that was exceeded. When appropriate, such data were excluded from the assessments. These reviews were performed manually, not as part of the automated processing of the IWR data.

Removal of results reported for mercury not collected and analyzed using Clean techniques: The use of clean techniques removes the chance for contamination of mercury samples from the atmosphere, which significantly biases the results upward, and ultimately does not represent in stream water quality. It is therefore reasonable for the State not to rely upon data entries based on non-clean techniques as evidence for instream water quality assessment.

Removal of result values based on recommendations from FDEP's Environmental Assessment Section as a result of lab audits performed on behalf of the TMDL program: The data excluded based on lab audits were generally analyte-specific and referred to a specific time frame. While the data issues encountered are variable, lack of acceptable, or verifiable, records is a common issue.

Removal of certain dissolved oxygen measurements collected for Group 2, Cycle 2 Assessments: Results reported for dissolved oxygen which were collected using a field kit (as opposed to a meter) were excluded from assessment under the IWR.
