	<u>DENSITY OF OIL /SHEEN</u>				
Total Collection Points					
Total Boom Deployed					
Activity	<p><u>Weston/START Talmadge Creek Branch Remedial Action Group (TCBRA) Team Activity:</u></p> <ul style="list-style-type: none"> • Enbridge continued excavation on Talmadge Creek today. Excavated approximately 225 linear feet of impacted soils and sediments this afternoon. Some moderate to heavy impacts were observed in the sediments during the excavation today. Sheen and globules were not observed in the excavation following the excavation activities. AECOM and MDEQ personnel collected verification samples in the first 200 feet of today's excavation. Excavation will continue tomorrow. • Multiple pumps were placed throughout the excavation to maintain water control and allow purging. • South side GAC system effluent maintained a constant flow throughout the day. The effluent water was discharged at the outfall bypass inlet and sent up to the silt removal system via (2) eighteen inch pumps. • Restoration to talmadge creek bed was a survey to identify the center and edges of the creek on the first fifty feet of the excavation. 				
Health and Safety Issues	None to report today.
