		<u>DENSITY OF OIL /SHEEN</u>			
Total Collection Points					
Total Boom Deployed					
Activity		<p><u>Weston/START Overbank Branch Recovery Group (OBR) Team Activity:</u></p> <p>OBR-2: START was informed at 2300 on 03/03/2012 that the Talmadge Creek Turbidity Control Structure was failing. On 03/04/2012 Heavy turbidity was observed in the sediment trap area and at the outfall of the diversion structure. During the night a breach in the Turbidity Control Structure caused a wash out of one of the banks of the quarry. The water ran down the hill into Talmadge Creek on the north side of A Drive. With nowhere to pump water too they were forced to allow the creek to resume flow. It was allowed to flow through the newly restored areas and the areas that had not yet been restored. Turbidity readings were taken and the highest reading was at the outfall which was 34.1 NTU. No sheen was observed in any associated location.</p>
