<b>Activity</b>		<p><b><u>START SOTF Team 7 Activity:</u></b></p> <p>START SOTF 7 and MDEQ (Paul Clarke) conducted oversight documentation of Enbridge Team G (Mike Bigsby and Guenter Miller). Team G conducted poling, Secchi disk measurements and water / sediment temperature reading at each target poling point from MP 38.50 to MP 39.25 in Morrow lake. Due to high winds Team G used anchors in the deeper sections of the lake. The winds would change directions during set up for monitoring and took longer to find the correct location. Later in the day Mike Bigsby marked locations with extended wood poles (two taped together) and the support boat with longer metal poles would set up and poling boat would tie up alongside. All target poling points were above sixty degrees. Summary of poling results for the target locations: total of twenty-one locations poled. 12 of the 21 locations with nothing, 9 of the 21 locations with lights, none of 21 locations had moderates, none of the 21 locations had heavies.</p> <p>Weather: Morning 53 degrees, sunny and winds 5-10 mph out of the North. Mid-morning winds increased to 10-15. Afternoon 61 degrees, sunny with winds 10-15 mph.</p>
