Kalamazoo River/Enbridge Spill	05/22/2012	1800		
4. Unit Name/Designators	5. Unit Leader		6. Operational Period :	
SOTF Team #1	Name:	Dan Capone & Joe Victory (START/US EPA)	From:	05/22/2012 0800
	Position:	Operations Section Chief	To:	05/22/2012 1800
7. Personnel Roster Assigned				
<u>Name</u>		<u>ICS Position</u>	<u>DUTY CELL</u>	
Dan Capone		Operations Section Chief		
Joe Victory		Operations Section Chief		
Dan Zahner		Field Team Lead		
Jose Aguilera		SOTF#1		
8. Activity Log				
Activity Area	MP6.25-8.25		LAT	LAT
			Various	Various
			(DD.MMMM)	(DD.MMMM)
<u>OIL OBSERVED</u>	EXTENT OF OIL IMPACTED AREA	NA		
	DENSITY OF OIL /SHEEN	NA		
Total Collection Points	NA			
Total Boom Deployed	NA			
Activity	<p><u>START SOTF Team #1Activity:</u> SOTF # 1 conducted oversight of Enbridge’s Team A poling re-assessment activities. Team A members Mike Neal Poling leader, Russell Patte GPS/Leica operator. Team A conducted Target Bathymetry Location data collection; 3 points were recorded in the GPS/Leica instrument including water level at those locations. Data is downloaded into the hydrodynamic model. Team A conducted poling sediment agitation at several focus areas: 7.45N 6 points recorded, 2 point with light sheen, 4 with none 7.35C 5 points recorded; 1 point with light sheen, 4 with no visible contamination area. 6.98T 1 point recorded, no visible contamination. 7.0R1 did not meet minimum sediment temperature area appears to be deep and mucky. 7.00S 24 points recorded, area has sand and gravel and fast flow. 6.68T 2 points recorded 1point with light sheen 1 point with no visible contamination. 6.45A 1 point recorded, no visible contamination. 6.25N 6 points, 1 point with light to sheen 5 points with no visible contamination. 8.43T 2 points recorded, no visible contamination. 8.07T 1 point recorded, no visible contamination. 8.25I 1 point recorded, no visible contamination detected. Temperature readings in the sediment ranged from a low of 60 to a high of 69 degrees Fahrenheit. Bed and water temperatures where a few degrees higher reaching up 70 degrees. Areas poled today consisted mostly of sand and gravel with relatively fast flow; however areas with the most visible oil sheen and globules had soft sediment accumulation.</p>
