<u>OIL OBSERVED</u>	EXTENT OF OIL IMPACTED AREA				
	DENSITY OF OIL /SHEEN				
Total Collection Points	N/A				
Total Boom Deployed	N/A				
Activity	<p><u>Weston/START Submerged Oil Branch Task Force Group (SOTF) Team Activity:</u></p> <p>SOTF#2 Jonathan Roubik (START), Team Lead Roy Wagner, and Leica operator Eric Celebreeze performed (or attempted) poling at 30 locations in focus areas 6.45N, 6.68T, 7.14T, 8.60N, 8.43T, 8.50L1, 8.75N and 11.25L1. Poling activities had 1 location (11.25L1-B-01B) that produced an overall submerged oil category of heavy sheen concentration. This area was delineated with poling of additional points. 4 locations produced moderate sheen (6.68T-B-02D, 8.43T-B-08, 11.25L1-B-01A and 11.25L1-B-01C). 13 locations produced an overall submerged oil category of light sheen and 12 locations produced no sheen. No locations were poled for bathometry data only.</p> <p>Data for all sites was collected following a temperate reading however only 9 out of the 30 poled locations passed the temperature requirements. (See field log for details) Sediment temperatures ranged from 51.8 to 64.3 degrees F, above sediment temperatures ranged from 52.2 to 63.6 degrees F, and surface water temperatures ranged from 52.2 to 63.4 degrees F.</p>				
Health and Safety Issues					
Comments	Moderate sheen was observed while walking/wading in focus area 8.50L1 between poling locations although all poling locations in the area were recorded as light. Also there was a significant amount of sheen found at the boomed collection point for this area. All poling in this focus area was completed with below 60 degree temperatures.
