	<b>DENSITY OF OIL /SHEEN</b>				
<b>Total Collection Points</b>	N/A				
<b>Total Boom Deployed</b>	N/A				
<b>Activity</b>	<p><b><u>Weston/START Submerged Oil Branch Task Force Group (SOTF) Team Activity:</u></b></p> <p>SOTF#2 Jonathan Roubik (START), Team Lead Eric Oleson, and Leica operator Eric Celebreeze performed (or attempted) poling at 45 locations in focus areas 35.10N, 34.93T, 34.48T, MABR2 and 34.00. Poling activities had 1 location that produced an overall submerged oil category of heavy sheen concentration (34.48T-B-01). 4 locations produced moderate sheen (34.48T-B-09, 34.48T-B-10A, 34.48T-B-10B and 34.00B-15). 20 locations produced an overall submerged oil category of light sheen and 13 locations produced no sheen. 3 locations was dry and unable to be poled.</p> <p>Data for all sites was collected following a temperate reading. (See field log for details) Sediment temperatures ranged from 57.6 to 70.8 degrees F, above sediment temperatures ranged from 65.4 to 72.4 degrees F, and surface water temperatures ranged from 58.5 to 75.1 degrees F.</p>				
<b>Health and Safety Issues</b>					
<b>Comments</b>	<p>Two locations were very borderline between light and moderate and the team had difficulty agreeing on a classification. 35.10N-B-08 was recorded as a light by EI and team leader. EPA representative felt this should have been classified as a moderate. Point 34.00-B-15 was recorded as a moderate by EPA representative and EI, however team lead felt this should be classified as a light.</p> <p>Sheen was collected by use of soft boom during poling ops.</p> <p>Boats used in areas where moderate or heavy sheen was observed were wiped with absorbent pads for decontamination onsite at the end of the day.</p>
