<u>OIL OBSERVED</u>	EXTENT OF OIL IMPACTED AREA	NA		
	DENSITY OF OIL /SHEEN	NA		
Total Collection Points	NA			
Total Boom Deployed	NA			
Activity	<p><u>START SOTF Team 6 Activity:</u></p> <p>SOTF#6 Kevin Johnson (START), Enbridge Team Lead Dave Richardson, and Leica operator Amber McDougal performed poling at 24 total locations. A total of 5 locations had an overall submerged oil category of heavy, 4 locations had an overall submerged oil category of moderate, and 11 locations had an overall submerged oil category of light. Four (4) locations indicated no signs of submerged oil.</p> <p>Generally, more light oil sheen was observed along areas of sand substrate with more moderate and heavy oil sheen observed along silt/soft substrate. Globules up to 1.25 cm were identified in locations having soft and silt based substrate. Larger globules were generally observed within focus areas associated with small tributaries with silt based substrate.</p> <p>One out of the 24 locations SOTF #6 conducted poling reassessment registered below the minimum temperature requirement of 60 degrees F. SOTF6 collected temperature readings for 10 additional locations within focus areas 6.00RDB, 7.0R1, 8.5L1, 8.43T, which had previously failed to meet the 60 degrees F requirement. Spring fed tributaries associated with focus areas 6.00RDB and 8.5L1 continue to register below 60 degrees F. Observed temperatures ranged from 53.10 to 78.46 degrees F.</p>			

	Poling operations were not significantly impacted by vegetation or environmental conditions within focus areas. SOTF#6 was able to successfully navigate to all tasked poling reassessment locations.
Health and Safety Issues	Boat operator K. Decker had a sand grain lodged in his left eye and was treated by medical staff. T. Brown served as a replacement boat operator for the afternoon.
