Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41473 MS/MSD data for Metals is not related to this project's samples.

Batch 41504 MS/MSD data for Volatiles is not related to this project's samples. The LCS recovery for 4-Methyl-2-Pentanone was above the upper control limit. All sample results in the batch were non-detect. No qualification is necessary for 4-Methyl-2-Pentanone.

Batch 41422 sample 1206043-07PAH internal standard recovery was below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the noted PAH compounds.

Batch 41423 samples 1206043-01, 1206043-03, and 1206043-05 DRO surrogate recoveries were above control limits due to matrix interference. The DRO/ORO results may be biased high.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41475 MS/MSD data for DRO is not related to this project's samples.

Batches 41473 and 41493 MS/MSD data for Metals is not related to this project's samples.

Batch 41475, Method DRO_8015M_S, Sample 1206045-05A MS: Surrogate out due to matrix interference.

Batch 41475 all samples for DRO in this work order had high surrogate recoveries due to matrix interference. The DRO results may be biased high due to this matrix interference.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41475 MS/MSD data for DRO is not related to this project's samples. Samples 1206059-01 through 1206059-05 analyses for DRO had surrogate recoveries above control limits due to matrix interference. The DRO results may be biased high.

Batch 41493 sample SBKR1150L516S053012S005 MS recoveries for Beryllium, Molybdenum, Nickel and Vanadium were below control limits. Both the MSD recoveries and RPDs met quality control criteria. No data requires qualification.

Batch 41504 LCS recovery for 4-Methyl-2-Pentanone was above control limits, but all samples in this quality control batch were ND for this compound. The MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 42093 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 42101 LCS recoveries for 4-Methyl-2-Pentanone and Tetrahydrofuran were above control limits, but all samples in this quality control batch were ND for these compounds. The MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Batch 42119 MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 42093 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 42142 sample SBKR0700I511S062712S006 MS/MSD recoveries for Nickel and Beryllium were above control limits. The corresponding results in the parent sample may be biased high for both these elements. The MS recovery for Vanadium and MSD recovery for Molybdenum were outside control limits. Both the MSD recovery and RPD for Vanadium and MS recovery and RPD for Molybdenum met quality control criteria. No data requires qualification.

Batch 42101 LCS recoveries for 4-Methyl-2-pentanone, Acetone, and Tetrahydrofuran were above control limits, but all samples in this quality control batch were ND for these compounds. No data requires qualification. Sample SBKR0700I511S062712S006 MS recoveries for 4-Methyl-2-pentanone, Acetone, Dichlorodifluoromethane, Styrene and Vinyl Chloride were outside control limits. Both the MSD recoveries and RPDs met quality control criteria. No data requires qualification. The MS/MSD recoveries for trans-1,4-Dichloro-2-butene were below control limits. The corresponding reporting limit in the parent sample may be biased low for this compound.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 42142 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 42101 LCS recoveries for 4-Methyl-2-Pentanone, Acetone and Tetrahydrofuran were above control limits, but all samples in this quality control batch were ND for these compounds. No data requires qualification. The MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41497 MS/MSD data for DRO is not related to this project's samples.

Batch 41516 MS/MSD data for Metals is not related to this project's samples.

Batch 41496 samples 1206175-03, 1206175-04, and 1206175-07 PAH internal standard recoveries were below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the marked PAH compounds.

Batch 41497 samples 1206175-03, and 1206175-05 DRO surrogate recoveries were high due to matrix interference. The DRO results may be biased high.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41497 MS/MSD data for DRO is not related to this project's samples.

Batch 41516 MS/MSD data for Metals is not related to this project's samples.

Batch 41592 MS/MSD data for Volatiles is not related to this project's samples.

Batch 41496 sample 1206176-01 PAH internal standard recovery was below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the marked PAH compounds.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41497 sample SBKR1225L502S060412S005 RPD between the MS/MSD recoveries for the DRO surrogate, 4-Terphenyl-d14, was above control limits. The individual MS/MSD recoveries met quality control criteria.

Batch 41516 sample SBKR1225L502S060412S005 MSD recoveries for Nickel and Vanadium were below control limits. Both the MS recoveries and RPDs met quality control criteria.

Batch 41524 MS/MSD data for Metals is not related to this project's samples.

Batch 41496 samples 1206177-01 and 1206177-02 PAH internal standard recoveries were below the lower control limit, but >20%. Per the client’s request, the results associated with the IS are being reported and should be considered as estimated for the marked PAH compounds.

Batch 41497 samples 1206177-02 and 1206077-08 DRO surrogate recoveries were high due to matrix interference. The DRO results may be biased high.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 4152 samples 1206178-01 and 1206178-03 DRO surrogate recoveries were above control limits due to matrix interference. The DRO results may be biased high.

Batch 41524 sample SBKR1200L505S060412S010 MS/MSD recoveries for Beryllium, Molybdenum, Nickel, and Vanadium were below control limits. The results for these elements in the parent sample may be biased low due to matrix interference.

Batch 41592 sample SBKR1200L505S060412S010 MS/MSD recoveries for 1,1-DCE and Chloroethane were below control limits. The corresponding reporting limits in the parent sample may be biased low. The Method Blank had a reportable result for Bromomethane, but all samples in this work order were ND for this compound.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41543 MS/MSD data for ORO is not related to this project's samples.

Batch 41587 sample SBKR1200L519S060612S006 RPD between the MS/MSD recoveries for the DRO surrogate, 4-Terphenyl-d14, was above control limits. The individual MS/MSD recoveries met quality control criteria.

Batch 41619 MS/MSD data for Metals is not related to this project's samples.

Batch 41609 MS/MSD data for Volatiles is not related to this project's samples.

Batch 41542 samples 1206298-01 and 1206298-02 PAH internal standard recoveries were below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the marked PAH compounds.

Batch 41543 samples 1206298-01, 1206298-04, 1206298-05, 1206298-06, 1206298-08, 1206298-10, 1206298-11, and 1206298-13 DRO surrogate recoveries were above control limits. The DRO results in these samples may be biased high due to matrix interference.
