Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41728 MS/MSD data for Metals is not related to this project's samples.

Sample 1206434-01 was run at a 1:10 dilution for PAHs due to the extract being very dark and viscous.

Subject: COC changes for SWMON
Attachments: 20120618113203954.pdf

I am reviewing the WOA and have noticed that ORO/GRO was on the SWMON COCs from last week. This is incorrect and should not have been put on their. Attached are the revised COCs for SWMON and SWMON_SED. Can I get a revised WOA for 1206435 SWMON?

Sorry about this and thanks!

Case Narrative

Batch 41791 sample 1206435-13 had low surrogate recoveries for the PAH analysis. All PAH compounds were ND. The sample was reextracted outside of the holding time. This analyses had passing surrogate recoveries and all PAH compounds were ND. This second set of data is the data included in this report. The sample results for PAHs should be considered estimated.

Subject: COC changes for SWMON
Attachments: 20120618113203954.pdf

I am reviewing the WOA and have noticed that ORO/GRO was on the SWMON COCs from last week. This is incorrect and should not have been put on their. Attached are the revised COCs for SWMON and SWMON_SED. Can I get a revised WOA for 1206435 SWMON?

Sorry about this and thanks!

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41996 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 41943 LCS recovery for 4-Methyl-2-pentanone was above control limits, but all samples in this quality control batch were ND for this compound. The MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41353 MS/MSD data for Volatiles is not related to this project's samples.

Batch 41347 MS/MSD data for PAHs is not related to this project's samples.

This revised report has a corrected narrative and some of the samples' reporting limits for Acetone and Methyl Iodide have been raised to avoid reporting laboratory artifacts.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

This revised report has a corrected narrative and some of the samples' reporting limits for Acetone and Methyl Iodide have been raised to avoid reporting laboratory artifacts.

Batch 41353 sample SBKR1025L511S052312S010 MS recovery for trans-1,4-Dichloro-2-butene was below the lower control limit. The RPD between the MS and MSD was outside of the control limits for 1,1 Dichloroethene and Acetone. Both the MSD recovery and RPD for trans-1,4-Dichloro-2-butene met quality control criteria. The individual MS/MSD recoveries for 1,1 Dichloroethene and Acetone met quality control criteria. No data requires qualification.

Batch 41347 sample SBKR1150L508S052312S005 MS recovery for Benzo (a) anthracene was above the upper control limit for Benzo (a) anthracene. Both the MSD recovery and RPD for met quality control criteria. No data requires qualification.

Batch 41364 MS/MSD data for Metals is not related to this project's samples.

Case Narrative

QC Comments:

Batch 41353, Method VOC_8260_SOIL, Sample SBKR1025L511S052312S010 MS: The MS recovery was below the lower control limit. The sample results may be biased low for this analyte: trans-1,4-Dichloro-2-butene.

Batch 41353, Method VOC_8260_SOIL, Sample SBKR1025L511S052312S010 MSD: The RPD between the MS and MSD was outside of the control limits for 1,1 Dichloroethene and Acetone . The corresponding results in the parent sample should be considered estimated for these analytes.

Batch 41347, Method SVOC_8270_SOIL, Sample SBKR1150L508S052312S005 MS: The above the upper control limit for Benzo (a) anthracene. The sample results may be biased high for this analyte.

Batch 41364, MS/MSD data for Metals is not related to this project's samples.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41475 SBKR1150L524S053112S004 MS/MSD recoveries for the DRO surrogate, 4-Terphenyl-d14, were above control limits due to matrix interference. Samples 1206045-01, 1206045-02, 1206045-03, 1206045-06, 1206045-07,and 1206045-08 had high DRO surrogate, 4-Terphenyl-d14, recoveries due to matrix interference. The DRO results in these samples may be biased high.

Batch 41473 sample SBKR1150L523S053112S004 MS recoveries for Beryllium, Molybdenum, Nickel and Vanadium were above control limits. Both the MSD recoveries and RPDs met quality control criteria. No data requires qualification.

Batch 41463 LCS/LCSD and MS/MSD recoveries for several Volatile compounds were below control limits due to a sample prep error. Only the Trip Blank data was reported from this batch, as there was not a second VOA vial submitted. No re-analysis was possible.

Batch 41504 sample SBKR1150L523S053112S004 MS and LCS recoveries for 4-Methyl-2-pentanone were above control limits. Both the MSD recovery and RPD met quality control criteria. All samples in this quality control batch were ND for this compound. No data requires qualification.

Batch 41526 LCS/LCSD recoveries for 4-Methyl-2-pentanone were above control limits. All samples in this quality control batch were ND for this compound. No data requires qualification. Sample SBKR1150L528S053112S007 MS/MSD recoveries for MTBE were above control limits. The parent sample was ND for this compound. No data requires qualification. A second MS/MSD set of data is not related to this project's samples.
