1.0 Introduction

This monthly progress report for the period of June 1 through and including June 30, 2012 is submitted to the United States Environmental Protection Agency (U.S. EPA) and to the Michigan Department of Environmental Quality (MDEQ) to satisfy reporting requirements for each agency as defined below describing activities completed during the prior month.

Paragraph 18 of the U.S. EPA *Removal Administrative Order Under Section 311(c) of the Clean Water Act (CWA)*, issued on July 27, 2010 to Enbridge Energy Partners, L.P., Docket Number: CWA 1321-5-10-001 (U.S. EPA Order) as modified by Paragraph 6 of the Supplement to Order for Compliance Under Section 311(c) of the CWA, issued by U.S. EPA Region 5 on September 23, 2010 to Enbridge Energy Partners, L.P. *et al*., Respondents, Docket No: CWA 1321-5-10-001 (Supplemental Order) (U.S. EPA, 2010) requires monthly progress reports to be submitted to the U.S. EPA commencing on December 27, 2010 and continuing monthly thereafter (Supplemental Order, Paragraph 6(o)).

Paragraph 7.9 of the Administrative Consent Order and Partial Settlement Agreement entered *In the Matter of Enbridge Energy Partners, L.P., and Enbridge Energy, Limited Partnership*, proceedings under the Michigan Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, MCL 324.101 et seq. signed on November 1, 2010 (MDEQ, 2010) (MDEQ Order) requires Enbridge Energy, Limited Partnership (Enbridge) to submit to the MDEQ, formerly Michigan Department of Natural Resources and Environment, written progress reports on the 27th day of each month.

Following this introduction, *Section 2* of this report is arranged by activity, for example 'Surface Water and Sediment Monitoring Activities'. In each subsection, the subject area work is introduced and an update of progress made in the previous month is described, including field activities performed, analyses completed, and reports submitted. Each section also summarizes future work planned. Conclusions are presented in *Section 3* and references are provided for each section in *Section 4.* Planning resources, including daily summaries of completed work (referred to as *Incident Command System* (ICS) *214*), *Incident Action Plans* (IAPs), and work orders are provided as *Appendix A.*

Laboratory analytical reports of samples that were collected and received in June 2012 can be found in *Appendix B*. Laboratory analytical reports received in June 2012 for samples collected prior to June 2012 can be found in *Appendix C*. All laboratory analytical results received for samples collected in June 2012 and received in July 2012 will be submitted with the July 2012 monthly progress report.

There were no work plans approved during June 2012. Level 1 reviews of laboratory analytical results are included in *Appendix D*.

Waste manifests and bills of lading received in June 2012 are included in *Appendix E*.

2a.0 Surface Water and Sediment Monitoring Activities

2a.1 Introduction

In June 2012, monthly surface water and sediment monitoring activities were conducted per the *Addendum to the Sampling and Analysis Plan (SAP): Attachment C - Surface Water and Sediment Monitoring Supplement to the Sampling and Analysis Plan* approved by MDEQ on May 18, 2012 (Enbridge, 2012(1)). Sampling activities were completed at routine monitoring locations to assess the quality of the surface water in the Kalamazoo River and Morrow Lake.

2a.2 Work Completed

2a.2.1 Surface Water Monitoring

In June 2012, surface water sampling consisted of collecting samples from nine locations in the Kalamazoo River (between the Talmadge Creek confluence and Morrow Lake), eight locations within Morrow Lake, and one location in the Kalamazoo River immediately downstream of the Morrow Lake Dam per the *SAP: Attachment C* (Enbridge, 2012(1)). Surface water sample location identification number (Sample ID), location description, and latitude and longitude coordinates for each surface water monitoring location are provided in *Table 2a-1*.

Table 2a-1. Surface Water Monitoring Locations-Kalamazoo River and Morrow Lake

Surface water samples (18 samples plus one duplicate) were collected from 18 locations during June 2012 and were compared to Michigan *Rule 57 Water Quality Standards* (MDEQ, 2011). There were no analytical results that exceeded the Michigan *Rule 57 Water Quality Standards* (MDEQ, 2011). *Figure 2a-1* shows the sample locations.

In addition to the proposed monitoring schedule, turbidity monitoring was conducted remotely in Talmadge Creek at the confluence with the Kalamazoo River from June 1 through and including June 8, 2012 excluding Sundays. The results of this monitoring are described in *Section 2b.*

2a.2.2 Sediment Monitoring

Sediment sampling consisted of collecting samples from two locations in the Kalamazoo River (between the Talmadge Creek confluence and Morrow Lake) and one location within Morrow Lake. The sample location identification, location description, and latitude and longitude coordinates for these sediment monitoring locations are provided in *Table 2a-2*. *Figure 2a-2* shows these sample locations and any exceedances of U.S. EPA *Region 5 Ecological Screening Levels (ESLs) 2003* (U.S. EPA, 2003) or *Threshold Effects Concentration (TEC) Guidelines*

(MacDonald et al., 2000), both of which are included as appendices to the MDEQ Remediation and Redevelopment Division (RRD) *Operational Memorandum No. 4, Attachment* (MDEQ, 2006).

Table 2a-2. Sediment Monitoring Locations

Sediment samples (three samples plus one duplicate) were collected from three monitoring locations during June 2012 and compared to *U.S. EPA Region 5 Ecological Screening Levels* (ESLs) *2003* (U.S. EPA, 2003), and to *Threshold Effects Concentration* (TEC) *Guidelines* (MacDonald et al., 2000). The sediment sample collected from one monitoring location (SWKR1565C01) had laboratory analytical results that exceeded criteria.

The following constituents were detected above the ESL in the sediment sample and the duplicate sample collected from monitoring location SWKR1565C01:

- Benzo(a)anthracene,
- Benzo(a)pyrene,
- Benzo(g,h,i)perylene,
- Benzo(k)fluoranthene,
- Chrysene,
- Fluoranthene,
- Indeno(1,2,3-c,d)pyrene,
- Phenanthrene, and
- Pyrene.

Also, the following constituents were detected above the TEC in the same sediment sample and duplicate sample:

- Benzo(a)anthracene,
- Benzo(a)pyrene,
- Chrysene,
- Fluoranthene,
- Phenanthrene, and
- Pyrene.

2a.3 Work Planned

2a.3.1 Surface Water Monitoring

The next monthly surface water monitoring event for the Kalamazoo River and Morrow Lake is scheduled for the week of July 9, 2012 per the *SAP: Attachment C* (Enbridge, 2012(1)).

2a.3.2 Sediment Monitoring

Sediment monitoring for the Kalamazoo River and Morrow Lake is conducted on a quarterly schedule with the next sampling event tentatively scheduled for the week of September 10, 2012.

2b.0 Water Quality Monitoring Activities

2b.1 Introduction

The Water Quality Monitoring Program was initiated in July 2011 in response to concerns about the potential risk to fish populations related to reduced dissolved oxygen (DO) levels. This monitoring program was implemented in accordance with the *Water Quality Measurement Standard Operating Procedure* (Enbridge, 2011) approved by MDEQ on September 22, 2011.

During June 2012, water quality was monitored at Ceresco Dam and upstream of the confluence of Talmadge Creek and the Kalamazoo River. Water quality readings consisted of turbidity and water temperature measurements at the Talmadge Creek confluence. DO was monitored in addition to turbidity and water temperature during sheet pile and containment removal activities at the Ceresco Dam Portage construction.

2b.2 Work Completed

Monitoring location WQ-TC-Remote was established to monitor water quality at the confluence of Talamadge Creek and the Kalamazoo River after excavation and restoration activities had been completed. The water quality monitor is located in Talmadge Creek between A Drive and the confluence. This location was monitored remotely. Temperature and turbidity readings were recorded every five minutes during daily work hours (0700 through 1900, Monday through Saturday). Water quality monitoring readings at this location took place from June 1 through and including June 8, 2012, excluding June 3, 2012.

In addition, monitoring was conducted during the removal of the containment and sheet pile at the Ceresco Dam Canoe Portage that is currently being constructed. Water quality monitoring readings were collected at this location on June 21, 2012.

All data collected during the month of June 2012 are provided in *Tables 2b-1 through 2b-8* (See Attached). Water quality monitoring locations are shown on *Figures 2b-1 and 2b-2*.

2b.3 Work Planned

Water quality monitoring will no longer be regularly conducted at the confluence because there is no longer work being conducted in Talmadge Creek that would require water quality monitoring. The need to resume water quality monitoring will be evaluated as appropriate.

2c.0 Potable Water Monitoring Activities

2c.1 Introduction

In June 2012, quarterly potable well sampling was conducted in accordance with the *SAP: Attachment B*, approved by MDEQ on May 18, 2012 (Enbridge, 2012). An amended sampling plan for wells not sampled on a quarterly basis is under development. Well locations and eligibility status as of June 29, 2012 are shown on *Figure 2c-1*.

2c.2 Work Completed

2c.2.1 Residential Drinking Water Wells

There are currently 168 residential wells eligible for sampling under the SAP (Enbridge, 2012) included in the potable well monitoring program. These wells fall into four categories: winterized; not accessible; refused permission; and, yes. 'Yes' denotes the wells are being sampled at the frequency outlined in the SAP (Enbridge, 2012). Wells designated as 'winterized', 'not accessible', or 'refused permission' are eligible but they are not currently being sampled. Some well pumps at unoccupied homes owned by Enbridge are turned off. These wells are categorized as 'winterized'.

The eligibility status of the wells was not altered during this monitoring period.

Results of residential potable well monitoring are reported through several methods. Each time sampling occurs, a report is submitted to the Calhoun and Kalamazoo County Public Health Departments providing notification of the sample locations. On a monthly basis, information shown on *Tables 2c-1 through 2c-3* (See Attached), and *Figure 2c-1* is updated and posted on the Enbridge Sharepoint site, which can be accessed by Calhoun and Kalamazoo County Public Health Departments, MDEQ, and U.S. EPA. This information is also updated when public health meetings are held. Analytical data are uploaded to the U.S. EPA SCRIBE database (a software tool used to manage environmental data) to be viewed by Calhoun and Kalamazoo County Public Health Departments, MDEQ, U.S. EPA, and Michigan Department of Community Health. Well owners receive landowner letters communicating the analytical results of their potable water well sample within a month of sample collection.

Multiple sampling events have been completed at the 168 residential wells included in the potable well monitoring program. The results for all wells sampled through June 29, 2012 are summarized on *Tables 2c-1 through 2c-3* (See Attached), and *Figure 2c-1*. The results for the wells sampled in June 2012 are summarized on *Table 2c-4* (See Attached). The tables include updates on well locations, access status, sampling data, and landowner letters. Sample frequency and constituent detections are also summarized on *Figure 2c-1*.

2c.2.2 Groundwater Monitoring

Groundwater samples were collected and analyzed in June 2012 from five monitoring wells (including one duplicate) in the Village of Augusta and five monitoring wells (including one duplicate) at the City of Kalamazoo Wellfield #39. Samples were collected in accordance with the *Augusta Monitoring Well Installation Work Plan* (Enbridge, 2011(2)) and the *Kalamazoo Monitoring Well Installation Work Plan* (Enbridge, 2011(3)).

2c.3 Work Planned

2c.3.1 Residential Drinking Water Wells

Residential drinking water sampling for the potable well monitoring program is planned to continue during July 2012 per *SAP: Attachment B* (Enbridge, 2012). An additional sampling event to include those wells not sampled on a quarterly basis is planned for July or August 2012.

2c.3.2 Groundwater Monitoring

A letter report for the June 2012 monitoring well sampling at the Village of Augusta wellfield will be completed and submitted to the Village of Augusta, the Village of Augusta Chief of Police Jeff Heppler, and a courtesy copy provided to the MDEQ in July 2012.

A letter report for the June 2012 monitoring well sampling at the City of Kalamazoo Wellfield #39 will be completed and submitted to the City of Kalamazoo and a courtesy copy provided to the MDEQ in July 2012.

No groundwater analytical data will be collected during July 2012 from the five monitoring wells for the Village of Augusta and the City of Kalamazoo Wellfield #39. The sampling of the wells has been transitioned from a monthly to a quarterly sampling frequency and is tentatively scheduled for sampling during September 2012.

2d.0 Air Sampling and Monitoring Activities

2d.1 Introduction

During June 2012, there were no air monitoring or air sampling documents submitted to U.S. EPA.

Air sampling and monitoring activities are performed in 'community' and 'work areas' in accordance with the *Air Monitoring and Sampling Addendum to the Sampling and Analysis Plan* (Enbridge, 2012). The term 'community' includes all individuals living or working near areas potentially impacted by the Enbridge Line 6B crude oil release or from subsequent response actions. 'Work areas' are those sites where workers are engaged in oil recovery activities. During June 2012, air monitoring activities were only performed in work areas during boom deployment/maintenance activities and poling activities.

The purpose of air monitoring and sampling activities is to assess community exposures to target analytes and worker exposure to chemicals of potential concern (COPCs). Target analytes are those volatile organic compounds (VOCs) associated with the release and measured by modified U.S. EPA Method TO-15 laboratory analysis. All other VOCs reported from the TO-15 method are referred to as non-target analytes. COPCs are a subset of the 'target analytes' that includes:

- Benzene,
- Toluene,
- Ethylbenzene,
- Xylenes, and
- N-hexane.

2d.2 Work Completed

No air sampling activities were conducted in June 2012. Air monitoring activities were conducted in work areas as discussed below.

2d.2.1 Community Air Monitoring

No community air monitoring was conducted in June 2012.

2d.2.2 Community Air Sampling

No community air sampling was conducted during June 2012.

2d.2.3 Work Area Air Monitoring

Real-time air monitoring data were collected to provide information regarding airborne chemical concentrations for immediate use. MultiRAEs™ were used to collect real-time air quality data for VOCs, carbon monoxide (CO), and hydrogen sulfide (H_2S). If monitoring indicated a VOC alarm above applicable action levels, benzene monitoring was initiated utilizing benzene-specific monitoring devices, including UltraRAEs™ and Gastec™ tubes. This information assisted field personnel with hazard assessment for potential worker and community exposure scenarios.

Real-time air monitoring in work areas was conducted from June 1 through and including June 28, 2012 with the exception of June 3, 10, 17, 24, 26, 29, and 30, 2012 when no oil recovery activities were being conducted. Real-time air monitoring readings were collected by Enbridge Safety in oil recovery work areas, which consisted of boom deployment and maintenance and poling. A total of 618 readings were collected in the work areas during oil recovery activities during June 2012, including:

- 206 VOC readings,
- 206 CO readings, and
- 206 H_2S readings.

There were no detections during boom deployment and maintenance activities conducted in June 2012. However, there were 12 VOC detections (ranging from 0.2 to 0.9 ppm) and 3 CO detections (ranging from 1 to 2 ppm) during poling activities. Of the 12 VOC detections, 9 were documented on a single day and it was determined this was due to an equipment malfunction that was discovered at the end of the day. The three remaining VOC detections were not sustained readings, two were indicative of boat motors and the third was not detected during actual poling activities. All three detections of CO were attributed to boat motors.

2d.2.4 Odor Response

In response to the release, Enbridge established a hotline number that remains available throughout the response activities for the public to communicate their concerns to Enbridge. As work activities

were initiated, the public was encouraged to use the hotline to report any perceived odor issues related to these activities. There were no calls regarding odor issues that required air sampling or monitoring efforts in June 2012.

2d.3 Work Planned

In July 2012, air monitoring and sampling activities per the approved *Air Monitoring and Sampling Addendum to the Sampling and Analysis Plan* (Enbridge, 2012), will continue within work areas and within communities adjacent to oil recovery activities. Specifically, air monitoring will be conducted within the work areas during oil recovery activities. Community air monitoring and sampling will only be initiated during specific conditions outlined in *Air Monitoring and Sampling Addendum to the Sampling and Analysis Plan* (Enbridge, 2012). Odor response activities will address odor complaints during periods of oil recovery activities.

2e.0 Submerged Oil Assessment and Recovery Activities

2e.1 Introduction

During June 2012, submerged oil assessment activities including poling and sediment collection were performed. Poling activities consisted of the Spring 2012 (or is it 2012 Spring - Figures say 2012 Spring. Just need to be consistent) Reassessment Poling and routine monitoring in Morrow Lake and the Morrow Lake Delta. Activities also included collection of sediment from the 19 Walling Suspended Sediment (WSS) samplers located throughout the affected Kalamazoo River system, the Morrow Lake Delta, and Morrow Lake.

No submerged oil recovery field activities were conducted during June 2012.

2e.2 Work Completed

2e.2.1 Spring 2012 Reassessment Poling

The Spring 2012 Reassessment poling of the Kalamazoo River, Morrow Lake, and Morrow Lake Delta was conducted during June 2012. These activities werecompleted on June 22, 2012. Poling ring tests were also conducted starting mid-June at dry poling locations. A total of 4,161 poling locations were incorporated into the 2012 Reassessment data set during the June 2012 reporting period. The results of the 4,161 poling locations showed 1,281 ‘none’ locations, 1,818 ‘light’ locations, 712 ‘moderate’ locations and 350 ‘heavy’ locations. The poling locations and results completed during June 2012 are shown in *Figure 2e-1*.

The U.S. EPA directed that poling be completed at a minimum water and sediment temperature of 60 degress Farenheit (°F) (U.S. EPA, 2012). Beginning in mid-June, poling locations that had been assessed at lower temperatures than this minimum temperature requirement were re-assessed. Some of the poling locations did not have minimum temperatures of 60°F due to natural features, such as a nearby spring or because the location was dry or inaccessible and therefore could not be re-assessed. Additionally, locations that had previously been collected with a submerged oil category result of ‘heavy” were not re-visited.

2e.2.2 Spring 2012 Poling (Monitoring)

Submerged oil monitoring activities were conducted on Morrow Lake including the Sediment Fan on a weekly basis throughout June 2012 and on the Morrow Lake Delta during the last week of June 2012. The poling activities conducted on Morrow Lake including the Sediment Fan were at 65 pre-determined poling locations. These included the 40 poling locations monitored at the end of the 2011 field season and an additional 25 locations added in the western portion of the lake. Five rounds of poling were completed. The results of the poling conducted during the last round of monitoring in June 2012 showed that no 'heavy' locations were identified and two 'moderate' locations were identified in the eastern half of the lake. The remainder of the locations were characterized as 'light' or 'none'. The poling locations and associated submerged oil results are provided in *Figure 2e-2*.

In addition, one round of poling was conducted on the Morrow Lake Delta from June 27 through and including June 29, 2012. A total of 61 pre-selected locations were poled to determine presence and characterization of submerged oil. The results indicated that 21 'heavy' and 17 'moderate' locations were present across the Delta, but mainly concentrated in the western portion. The remaining 23 locations were 'light' or 'none'. The poling locations and associated submerged oil results are provided in *Figure 2e-3.*

2e.2.3 Sediment Collection

Additional field work for submerged oil activities included sample collection from 11 WSS sample locations. The WSS samplers have been installed at 20 locations with two individual samplers being installed at a majority of the locations. Three locations, WSS-02, WSS-11, and WSS-18, have only one sampler due to limited water depth.

Sediment samples from the WSS samplers are collected on a monthly basis. In June 2012 samples were collected from the WSS locations. The WSS were vertically positioned to allow for the sediment to settle out of suspension over a 12-hour period after being retrieved from the field. Following the initial 12-hour period the WSS samplers were then placed on a table at an angle for another 12-hours, for a total of 24-hours before being decanted. Once the WSS were decanted the sediment remaining within the samplers was transferred to 32-ounce sample jars. The sediment was allowed to settle in the sample jars before a second round of decanting was completed. After the sample jars were decanted, the sediment was transferred to 8-ounce sample jars and submitted to the

laboratory for analysis. The laboratory further dried the samples to obtain a dry weight. If the volume of a sample is insufficient to complete the analyses, the sediment samples at a single location are composited to obtain a sufficient volume to conduct the analysis. The 19 WSS locations are shown in *Figure 2e-4.* The samplers were re-installed at the 19 locations following sample collection.

2e.2.4 Temperature Effects Study

During June 2012, submerged oil temperature effects work was not conducted.

2e.3 Work Planned

2e.3.1 2012 Reassessment Poling

Reassessment poling activities are complete and not anticipated to continue in July 2012.

2e.3.2 Spring 2012 Poling Monitoring

The monitoring of Morrow Lake and Morrow Lake Delta will continue in July 2012 to assess and characterize the presence of submerged oil to determine if assessed locations are changing or remaining static.

2e.3.3 Sediment Collection

The *2012 Consolidated Work Plan* (Enbridge, 2011) requires sampling of the WSS samplers on a monthly basis. Therefore, the WSS samplers will be sampled during July 2012.

2e.3.4 Temperature Effects Study

No further work is anticipated related to the Temperature Effects Study.

2f.0 Remedial Investigation Activities

2f.1 Introduction

Remedial investigation (RI) activities conducted in June 2012 were in support of the Kalamazoo River RI Program. Activities for the RIs were conducted in accordance with the following work plans:

- *Remedial Investigation Work Plan for Kalamazoo River (MP 5.80 to MP 11.00)* approved by MDEQ on February 10, 2012 (Enbridge, 2012(1)), and
- *Remedial Investigation Work Plan for Kalamazoo River (MP 11.00 to Morrow Lake Dam)* approved by MDEQ on March 8, 2012 (Enbridge, 2012(2)).

2f.2 Work Completed

Field activities were conducted for the Kalamazoo River RI from MP 6.00 to MP 21.50 and included the following:

- Soil and sediment core collection via manual techniques,
- Soil and sediment sampling from the collected cores,
- Continuous logging of collected cores,
- Evaluation of soil and sediment cores using ultraviolet (UV) light,
- Installation of temporary monitoring wells in select soil borings,
- Groundwater sampling via low-flow techniques,
- Collection of surface water samples at select locations, and
- Global Positioning System (GPS) collection of horizontal (X, Y) coordinates for each boring and bulk sediment location.

Soil, sediment, groundwater, and surface water samples were collected and analyzed for the following:

- Polynuclear aromatic hydrocarbons,
- Four select metals (beryllium, vanadium, nickel, and molybdenum), and
- Total petroleum hydrocarbons as diesel range organics and oil range organics, and
- VOCs at locations upstream of MP 14.00 (soil only).

2f.2.1 HP OSCAR Remedial Investigation

No activities related to expedited remedial investigations at High Priority Outstanding Sites Characterization and Reconciliation (HP OSCAR) locations occurred during June 2012.

2f.2.2 Kalamazoo River Remedial Investigation

Kalamazoo River RI activities continued during June 2012 and were conducted in accordance with *Remedial Investigation Work Plan for Kalamazoo River (MP 5.80 to MP 11.00)* (Enbridge, 2012(1)) and *Remedial Investigation Work Plan for Kalamazoo River (MP 11.00 to Morrow Lake Dam)* (Enbridge, 2012(2)).

The initial scopes of work for the work plans covering MP 2.25 to MP 5.80 were completed prior to this reporting period. The initial scope of work for the work plans covering MP 5.80 to Morrow Lake Dam commenced prior to this reporting period. As analytical reports are received, step-out borings will be completed from MP 2.25 to Morrow Lake Dam as necessary for delineation purposes. Investigation activities performed during this reporting period emphasized Enbridge-owned properties and river access points from MP 6.00 to MP 21.50.

The locations of borings installed during June 2012 for the Kalamazoo River RI field activities are presented in *Figure 2f-1*.

2f.2.3 Parcel Primers and Presentations

A Parcel Primer development and presentation procedure was initiated in June 2012. The purpose of the Parcel Primer is to provide the parcel owner with documentation of Enbridge and MDEQ concurrence that further O&M and/or remedial investigation activities are not required on the subject parcel.

Each parcel is categorized into one of three color code designations:

- "No Color" – Parcel does not require investigation, data compilation, or review,
- "Green Hatched" – Limited data compilation and a "Live GIS" presentation to show lack of historical issues, and
- "Orange" – Parcel requires RI activities and a full primer package.

The final templates for the primer package and concurrence form remain under review; however, each primer package contains:

- Parcel location and precise description of RI study area,
- Assessment history,
- RI history,
- Ecological setting and assessment,
- Additional assessments and descriptions, as applicable, and
- Conclusions and recommendations, including the concurrence form.

Primers submitted for MDEQ review and concurrence in June 2012 include;

- *Presentation for Parcels located within Squaw Creek Subdivision MP 2.75 – MP 3.25*, submitted June 13, 2012 (Enbridge 2012(5)),
- *Presentation for Kalamazoo River Saylor's Landing Access Site: Parcel TC-B-078.001*, submitted June 13, 2012 (Enbridge 2012(6)),
- *Addendum to Presentation for Kalamazoo River Saylor's Landing Access Site: Parcel TC-B-078.001*, submitted June 27, 2012 (Enbridge 2012(7)),
- *Presentation for Kalamazoo River Parcel KN-C-143 (10-017-002-00) (MP 13.00 R1)*, submitted June 28, 2012 (Enbridge 2012(8)), and
- *Presentation for Kalamazoo River Parcel KN-C-085 (16-340-075-00) (MP 2.00 to 2.25 RDB)*, submitted June 28, 2012 (Enbridge 2012(9)).

2f.2.4 Additional Investigations

Additional investigation activities were conducted in June 2012 in support of and in accordance with the *Investigation Work Plan for Source Area (A1)* approved by the U.S. EPA on May 21, 2012 (Enbridge, 2012(3)). The objective of this work was to identify and characterize the nature and extent of any residual oil impact in Sub-Unit A1 of the Source Area.

Field activities were conducted for Sub-Unit A1 of the Source Area investigation from June 7 through June 8, 2012 and included the following:

- Soil and sediment core collection via manual techniques,
- Logging of collected cores,
- Evaluation of soil and sediment cores using UV light,
- Poling at field-selected locations to locate and classify submerged oil, and
- GPS collection of horizontal (X, Y) coordinates for each boring and poling location.

Analytical samples were not collected from the soil and sediment cores. The locations of poling activities and soil and sediment borings installed in Sub-Unit A1 are presented in *Figure 2f-2*. A *Report of Findings for the Investigation Work Plan for Source Area (A1)* will be submitted in July 2012.

2f.3 Work Planned

Planned RI activities for July 2012 consist of the following:

- Continue implementation of field activities for Kalamazoo River RI (MP 2.25 to Ceresco Dam (MP 5.80)) in accordance with *Remedial Investigation Work Plan for Kalamazoo River (MP 2.25 to MP 3.14)* approved by MDEQ on November 18, 2011 (Enbridge, 2011), and *Remedial Investigation Work Plan for Kalamazoo River (MP 3.14 to Ceresco Dam (MP 5.80))* approved by MDEQ on January 13, 2012 (Enbridge, 2012(4)) as necessary,
- Continue implementation of the Kalamazoo River RI (MP 5.80 to MP 11.00) in accordance with *Remedial Investigation Work Plan for Kalamazoo River (MP 5.80 to MP 11.00)* approved by MDEQ on February 10, 2012 (Enbridge, 2012(1)),
- Continue implementation of the Kalamazoo River RI (MP 11.00 to Morrow Lake Dam) in accordance with the *Remedial Investigation Work Plan for Kalamazoo River (MP 11.00 to Morrow Lake Dam)* (Enbridge, 2012(2)).
- Data Gap RI in the Source Area, and
- Parcel Primer generation and presentation.

2g.0 Temporary Facility Restoration and Demobilization Activities

2g.1 Introduction

Approximately 95 work sites have been used for release response activities to provide river access sites, staging of equipment and materials, decontamination, waste staging, and similar activities. As work is completed, site decommissioning and closure activities are performed to remove equipment and consumables, implement soil erosion and sediment control measures, and to restore the site to pre-response conditions. After activities cease, and as sites were vacated, inspections were performed. If appropriate, verification soil samples were collected for laboratory analysis in accordance with MDEQ requirements outlined in (RRD *Operational Memorandum No. 2* (MDEQ, 2004) for comparison to Part 201 of Michigan's Act 451 of 1994, as amended, Generic Residential Criteria in accordance with the *Soil Staging, Decontamination & River Access Site Closure Plan* (Enbridge, 2011), currently under review by MDEQ and U.S. EPA. The MDEQ is notified of each sampling event.

2g.2 Work Completed

2g.2.1 River Access Sites and Other Work Sites

No soil samples were collected at either River Access Sites or Other Work Sites during June 2012.

2g.2.2 Soil Staging and Decontamination Areas

No decomissioning samples were collected at Soil Staging and Decontamination Areas in June 2012.

2g.3 Work Planned

Sampling activities are planned for the northern area of Frac Tank City (FTC) during July 2012.

2h.0 River Bank Erosion Control and Restoration Activities

2h.1 Introduction

In June 2012, erosion control and restoration activities were conducted at two bridge and access sites and three Environment, Right of Way, and Operations (ERO) sites. Sites requiring erosion control and restoration activities were identified during work plan development, Kalamazoo River Bank Erosion Assessment (KRBEA) site monitoring events, or in coordination with representatives of Enbridge and the MDEQ.

Restoration of areas following oil recovery efforts, monitoring of previously restored areas, design and monitoring of wetland mitigation areas, implementation of sediment and erosion control measures, and continuation of MDEQ and Michigan Department of Natural Resources (MDNR) permitting efforts were conducted for numerous locations as described below in *Section 2h.2*.

2h.2 Work Completed

Restoration and erosion control activities were completed at two bridge and access sites as summarized in *Table 2h-1*.

Kalamazoo River Segments	Unique Site Identification	Work Completed
MP 21.00 – MP 21.25	MP 21.25 Custer Road Restoration Area	Installed approximately 150 cubic yards of topsoil, 18,000 square feet of mesic prairie native seed, 1,440 square feet of C125BN erosion control blanket, 16,560 square feet of straw mulch, 150 linear feet of exclusion construction fencing, 6 red osier dogwood shrubs, 4 spicebush shrubs, and 9 nannyberry shrubs to stabilize the area and improve habitat.
MP 37.00 – MP 37.25	MP 37.25 Launch Site E3.5	Installed approximately 115,500 square feet of mesic prairie native seed and straw mulch within previously disturbed areas on this former launch site to stabilize the area and improve habitat.

Table 2h-1. Bridge and Access Site Restoration Work Areas

Restoration and erosion control activities were completed at three ERO sites as summarized in *Table 2h-2*.

Kalamazoo River Segments	Unique Site Identification	Work Completed
Talmadge Creek	MP 1.75 Left Descending Bank(LDB)	Installed approximately 20 linear feet of coir log and 1,350 square feet of sedge meadow native seed mix on the subject site.
MP 6.25 – MP 6.50	MP 6.50 Left Descending Bank(LDB)	Installed 2 cubic yards of topsoil, 600 square feet of sedge meadow native seed mix, 600 square feet of C125BN erosion control blanket, 200 square feet of jute, and 1 apple tree on the subject site.
MP 32.00 – MP 32.25	MP 32.25 LDB	Installed 4,200 square feet of turf grass seed, 720 square feet of C125BN erosion control blanket, 3,380 square feet of straw mulch, and 2 cubic yards of 21AA road gravel for restoration and driveway repair on the subject site.

Table 2h-2. ERO Site Restoration Work Areas

KRBEA trips are made to assess, rank, and score Kalamazoo River sites exhibiting signs of existing erosion or potential for future erosion. KRBEAs are scheduled to occur every other month; however, adjustments to this schedule are made based on water levels, boating activity, and the ability to access and monitor the riverbank. The most recent KRBEA river trip was conducted from June 12 through and including June 13, 2012 (Monitoring Trip No. 8). Results from this trip will be presented in a future version of the *Kalamazoo River Bank Erosion Assessment and Action Plan Summary Report – Monitoring Trip No. 8,* which was under development in June 2012.

One of the nine high-priority KRBEA sites identified during Monitoring Trip No. 1 (November 28 through and including November 30, 2010), Raymond Road (MP 12.20 L1), has yet to be stabilized or restored. During June 2012, the permitting process for proposed final restoration and stabilization design plans continued in coordination with the MDEQ.

The *Kalamazoo River Bank Erosion Assessment and Action Plan Summary Report – Monitoring Trip No. 7* (Enbridge, 2012(1)) was submitted to MDEQ on June 21, 2012 for the previous river assessment monitoring trip that was conducted from April 18 through and including April 20, 2012. This report, along with *Kalamazoo River Bank Erosion Assessment and Action Plan Summary Report – Monitoring Trip No. 6* (Enbridge, 2012(2)) submitted to MDEQ on May 15, 2012, are currently under review by the MDEQ.

Although KRBEA site restoration preparation activities were conducted during June 2012, no field restoration activities were conducted on KRBEA sites in June 2012.

Other restoration and assessment activities completed in June 2012 included:

- Conducted post-construction site inspections of completed KRBEA sites as well as OB 5.92 Right (R), OB 13.40 LDB (formerly 13.50 Left (L)1 and LDB4), OB 15.00 Island (I) (formerly MP 15.00 I), OB 15.00 L (formerly MP 15.00 LDB), and Talmadge Creek,
- Used GPS to locate fallen tree and woody debris boat obstruction locations near MP 11.25 and 11.50 prior to subsequent removal,
- Revised and resubmitted the *Invasive Species Management Plan* (Enbridge, 2012(3)) to the MDEQ for review,
- Revised and resubmitted the *Final Restoration Plan, Talmadge Creek* (Enbridge, 2012(4)) to the MDEQ for review,
- Initiated or continued work on numerous MDEQ or MDNR permit application packages and supporting documents for HP OSCAR, Submerged Oil, KRBEA, or other future restoration work sites including: submerged sediment structure installation in accordance with the *Plan for Preventing Migration of Oil Past the Morrow Lake Dam During Winter 2011-2012 (MP 36.75 – 37.25)* submitted to U.S. EPA on November 8, 2011 (Enbridge, 2011(1)), submerged oil toolbox methods, the E 4.0 containment boom, the KRBEA Raymond Road site (12.20 L1), the Morrow Lake Fan, and the Bradley ERO site (MP 26.80 Right Descending Bank (RDB)), and
- Continued mitigation plan coordination and development for potential wetland mitigation locations.

2h.3 Work Planned

Work planned for July 2012 is as follows:

- Continue erosion control and restoration activities along the Kalamazoo River,
- Conduct post-construction inspections of completed restoration sites,
- Continue to monitor MDEQ processing of the submitted permit application for the high-priority KRBEA site at Raymond Road (MP 12.20 L1),
- Continue MDEQ permit application development and ecological assessments for designated work sites and projects,
- Initiate restoration along Talmadge Creek,
- Complete restoration at Bradley ERO site (MP 26.80 RDB),

- Potentially commence implementation of the *Talmadge Creek Final Restoration Plan* (Enbridge 2012(4)), and
- Potentially commence implementation of the *Invasive Species Management Plan* (Enbridge, 2012(3)).

2i.0 Sediment Traps and Cylindrical Sampling Devices

2i.1 Introduction

During June 2012, sediment trap and cylindrical sampling device (CSD) activities included monitoring, planning for proposed alternate locations, and data compilation of the May 2012 monitoring data. Monitoring activities were conducted at two sediment trap and CSD locations: 21.50 RDB and 28.25 RDB. In June 2012, planning for future sediment trap and CSD locations was conducted using the hydrodynamic model to estimate sedimentation rates. In addition, Hydrologic Engineering Center – River Analysis System (HEC-RAS) model runs were initiated to predict the 100-year flood surface water elevation impacts for 33.00 A RDB.

During June 2012, there were two HEC-RAS model runs initiated to determine the calculated 100-year backwater effects caused by the installation of a sediment trap at 33.00 A RDB.

2i.2 Work Completed

During June 2012, the following report was resubmitted to U.S. EPA and MDEQ for review:

- *Sediment Trap Monitoring and Maintenance Plan,* submitted to U.S. EPA on June 14, 2012 (Enbridge, 2012(1)).

2i.2.1 Sediment Trap Monitoring

During June 2012, no additional sediment traps, sediment structures, or CSDs were installed. Monitoring was conducted at two of the six installed sediment traps, 21.50 RDB and 28.25 RDB, in accordance with the *Sediment Trap Monitoring and Maintenance Plan,* submitted to U.S. EPA on June 14, 2012 (Enbridge, 2012(1)). Monitoring activities included poling and observation of the sediment collected in the CSD samplers. The poling results are included in *Table 2i-1* and are shown in *Figure 2i-1*.

Location	Poling ID	Date Conducted	Poling Result
MP 21.50	CSKR2150C01	June 1, 2012	Heavy
	CSKR2150C02	June 1, 2012	Heavy
	CSKR2150C03	June 1, 2012	Moderate
MP 28.25	CSKR2850C01	June 1, 2012	Light
	CSKR2850C01	June 1, 2012	Light
	CSKR2850C01	June 1, 2012	Light

Table 2i-1. Results for Sediment Trap Monitoring Event Conducted June 1, 2012

During June 2012, data compilation included calculating the rate of sedimentation in the CSD sample jars. The sedimentation rates were determined through review and evaluation of the data collected during the four monitoring events conducted during May 2012. The results for the sedimentation rates within the CSD sample jars are attached as *Table 2i-2*.

2i.2.2 Model Calculations

During June 2012, alternate sediment trap structures were proposed for two sediment trap locations, 26.00 RDB and 33.00 A RDB, to determine if sedimentation rates would be greater than in the original sediment trap location. Sedimentation rates for the alternate locations were determined by using the hydrodynamic model. The hydrodynamic model showed favorable sedimentation rates for the alternate sediment trap location at 33.00 A RDB and did not show favorable rates for 26.00 RDB. In June 2012, a HEC-RAS model run was initiated for the proposed alternate sediment trap location at 33.00 A RDB.

2i.3 Work Planned

During July 2012, the next round of monitoring is planned for the week of July 9, 2012. In addition, water level measurements for the proposed CSD locations within the proposed sediment traps will be conducted concurrently with monitoring events. The HEC-RAS model run for the alternate sediment trap location at 33.00 A RDB is expected to be completed.

2j.0 Waste Management Activities

2j.1 Introduction

In June 2012, waste management activities were conducted in accordance with the *Waste Treatment, Transportation, and Disposal (WTTD) Plan* (WTTD Plan) (Enbridge, 2011(1)) approved by U.S. EPA on May 17, 2011, the *Addendum to the Revised Waste Treatment, Transportation and Disposal Plan (May 20, 2011)* (Enbridge, 2011(2)) approved by U.S. EPA on June 20, 2011, and the *Operation and Maintenance Excavation Work Plan titled Waste Best Management Practices (BMPs)* (Enbridge, 2011(3)) approved by U.S. EPA on June 29, 2011.

Generated waste streams included, but were not limited to:

- Crude oil impacted debris,
- Non-impacted debris - Municipal Solid Waste (MSW),
- Crude oil impacted soil,
- Miscellaneous other small volume materials,
- Crude oil impacted water, and
- Non-impacted precipitation.

Table 2j-1 provides a list of transporters and disposal facilities used for management of each waste stream.

Table 2j-2. Waste Shipment Summary Through June 30, 2012

2j.2.1 Oily Debris

Oily debris is segregated from non-oily debris and stored in lined 20-cubic yard roll-off boxes. Handling procedures for oily debris were conducted in accordance with procedures outlined in the approved WTTD Plan (Enbridge, 2011(1)). Based on how the waste was generated (e.g. control points), sampling and required analyses were performed in accordance with the WTTD Plan (Enbridge, 2011(1)). Non-hazardous oily debris generated in June 2012 is shown in *Table 2j-2.*

2j.2.2 Non-Impacted Debris

Non-impacted (non-oily) debris or MSW generated at field locations was transported to Republic Services' C&C Landfill in Marshall, Michigan using lined 20-cubic yard roll-off boxes. Non-impacted debris was not sampled and was not included in the recovered oil calculations. The non-hazardous designation for the debris was based on generator knowledge.

2j.2.3 Soil

Crude oil impacted soil was excavated from the Ceresco Dam upstream canoe portage area. Handling procedures for oil impacted soil were conducted in accordance with the WTTD Plan (Enbridge, 2011(1)). Sampling frequency and required analyses were also performed in accordance with the WTTD Plan (Enbridge, 2011(1)).

Disposal requirements for oil impacted soil were based on an evaluation of analytical data. Non-hazardous oil impacted soil was disposed at Republic Services' C&C Landfill in Marshall, Michigan in June 2012. Hazardous soil was not generated during June 2012.

2j.2.4 Miscellaneous Small Quantity Waste Streams

Miscellaneous small quantity waste streams have been generated throughout the project. These wastes have primarily been stored in drums and include, but are not limited to: used oil, batteries, small quantities of medical waste, and lab samples. These waste streams have been characterized individually and disposed at approved facilities as required.

2j.2.5 Decontamination and Precipitation Wastewater

Accumulated decontamination and precipitation from FTC's soil staging cell containment was transported to LIWS in Holland, Michigan for disposal.

2j.2.6 Recovered Oil Calculations

The quantity of oil contained in waste materials has been calculated since the beginning of the release response. Oil and grease analytical results for oily solids and oily liquids are used to calculate recovered oil volumes. The oil quantity calculation is based on the concentration of oil (analytical results) in the waste and the total amount of waste shipped. Recovered oil values are determined for each waste stream and a recovered oil summary is reported weekly. A summary of this report through July 2, 2012 is provided in *Table 2j-3*.

2j.3 Work Planned

Waste management activities are planned to continue in accordance with the plans referenced in *Section 2j.1*. Soils with no free liquids will be transported either directly to FTC and stockpiled using a bill of lading or directly to the landfill using a manifest in accordance with the approved *Addendum to the Revised Waste Treatment, Transportation, and Disposal Plan* (Enbridge, 2011(2)). Each soil stockpile will have a representative sample (one 4-point composite sample collected and homogenized for oil and grease analysis) collected for every 200 cubic yards of

waste soil. Each load transported directly to the landfill will have one scoop (single point aliquot) of soil collected for oil and grease analysis prior to leaving the site per the approved *Operation and Maintenance Excavation Work Plan titled Waste Best Management Practices* (Enbridge, 2011(3)).

2k.0 Overbank Excavation Activities

2k.1 Introduction

During June 2012, no overbank excavation activities were conducted.

2k.2 Work Completed

No overbank excavation activities were conducted during June 2012.

2k.3 Work Planned

No overbank excavation activities are scheduled during July 2012.

2l.0 Overbank Oil Recovery Activities

2l.1 Introduction

During June 2012, no overbank oil recovery activities were conducted.

2l.2 Work Completed

No overbank oil recovery activities were conducted during June 2012.

2l.3 Work Planned

No overbank oil recovery activities are scheduled during July 2012.

2m.0 Hydrodynamic Assessment and Model Activities

2m.1 Introduction

Hydrodynamic assessment data has been used to develop an understanding of the riverine and floodplain system by identifying physical patterns and migration rates of sediment caused by various river conditions. During June 2012, velocity measurements and sediment trap monitoring were conducted to support the site hydrodynamic model. Additional tasks using the hydrodynamic model consisted of model runs to determine if alternate sediment trap structure configurations would further enhance sediment deposition in certain proposed sediment trap areas.

2m.2 Work Completed

During June 2012, field activities consisted of velocity measurements in Morrow Lake and the Kalamazoo River and sediment trap monitoring at the following locations:

- 10.75 LDB,
- 14.75 RDB,
- 19.25 LDB,
- 21.50 RDB,
- 28.25 RDB , and
- 36.10 Northwest.

In addition, the sampling of WSS samplers was completed and the 11 samplers were returned to the river. During June 2012, field work was conducted in accordance with the *Hydrodynamic Assessment Work Plan* (Enbridge, 2011).

2m.2.1 Hydrodynamic Modeling

The hydrodynamic model was used to evaluate new sediment trap structure locations and their effects on sediment deposition within that location. Three model runs to evaluate sediment trap effectiveness using alternate trap configurations were completed in June 2012.

Alternate sediment trap configurations were modeled for six potential sediment trap areas:

- 10.5 L2,
- 21.50 RDB,
- 26.00 RDB,
- 28.25 RDB,
- 33.00 A, and
- 33.00 B.

Each alternate sediment trap configuration was modeled under three different flow regimes:

- 'Normal' flow (600-800 cubic feet per second (cfs),
- The calibration flow period of October 31 through and including November 7, 2011),
- Bankfull flow (1,500 cfs flow period May 16 through and including May 23, 2011), and
- Overbank flood (3,000 cfs; the spill flow period of July 24 through and including July 31, 2010).

'Normal' flow sedimentation rate results, including comparisons to the previous sediment trap configuration results, are shown in *Figures 2m-1 through 2m-8*. Bankfull flow results are shown in *Figures 2m-9 through 2m-16*. Overbank flood results are shown in *Figures 2m-17 through 2m-24*.

2m.2.2 Water Velocity Monitoring

Velocity measurements on Morrow Lake and in the Kalamazoo River continued in June 2012. The measurements were collected on transects and on single point stations throughout Morrow Lake as well as in the Kalamazoo River near the Mill Ponds (MP 14.25 to MP 15.50) and above Ceresco Dam (MP 5.50 to MP 5.75). The water velocity measurement activities were conducted during a low flow event. Processed velocity results from June 2012 are shown in *Figures 2m-25 through 2m-34.*

2m.2.3 Suspended Sediment Samples

The 2012 reinstallation (June report says installation) of the WSS samplers was completed in April 2012. The devices were retrieved in May 2012 in order to test suspended sediment that

had been collected in the samplers. Samplers WSS1 through WSS5 and WSS17 through WSS20 were returned to the river (after sampling) in May 2012. Samplers WSS6, WSS10, WSS12, and WSS13 were returned to the river on June 1, 2012. Samplers WSS7, WSS11, and WSS14 were returned to the river on June 2, 2012. Samplers WSS8, WSS9, WSS15, and WSS16 were returned to the river on June 4, 2012. Locations of WSS samplers are shown in *Figure 2e-4.*

2m.2.4 Sediment Core Collection

Sediment core collection was not performed in June 2012.

2m.3 Work Planned

Work planned for July 2012 includes the following:

- Collect velocity measurements on Morrow Lake, Morrow Lake Delta, and the Kalamazoo River, and continue processing velocity data collected in June 2012.
- Remove, sample, and reinstall WSS samplers.
- Conduct sediment core collection, and
- Continue sediment trap monitoring.

3.0 Conclusion

As described in this monthly progress report for June 2012, Enbridge continued to conduct activities required under the U.S. EPA Order and Supplemental Order and to conduct activities pursuant to the MDEQ Order. The work conducted and data received during July 2012 will be included in the monthly report to be submitted on August 27, 2012.

Footnotes:

°C = degrees Celsius

DO = dissolved oxygen

DTB = depth to bottom

ft = feet

mg/L = milligrams per liter

NA = data not available

NTU = nephelometric turbidity units

* = Any meter displaying readings outside of normal ranges was recalibrated in the field. If problem persisted, the meter was replaced.

°C = degrees Celsius

DO = dissolved oxygen

DTB = depth to bottom

ft = feet

mg/L = milligrams per liter

NA = data not available

NTU = nephelometric turbidity units

* = Any meter displaying readings outside of normal ranges was recalibrated in the field. If problem persisted, the meter was replaced.

Footnotes:

°C = degrees Celsius

DO = dissolved oxygen

DTB = depth to bottom

ft = feet

mg/L = milligrams per liter

NA = data not available

NTU = nephelometric turbidity units

* = Any meter displaying readings outside of normal ranges was recalibrated in the field. If problem persisted, the meter was replaced.

General Safety Message:

Near Misses

Most safety incidents occur as a result of an unsafe condition or unsafe action coming together with a person. The end result is the person gets injured.

Often unsafe acts or unsafe conditions have several misfires and the result is a near miss. The only difference between a near miss and an incident is chance. All near misses need to be taken seriously

- Near misses are injuries without people.
- Near misses are not funny; they are often deadly.
- Always report a near miss.
- Take immediate action to prevent a similar near miss.
- If you did not cause a near miss but saw it, report it. You may be saving a life.

Remember: Near misses are warnings that something or someone is not performing the job correctly. Don't let near misses repeat themselves or you may find yourself or a co-worker being treated for an injury that could have been avoided.

Safety Items for June 1st: There are no issues to report.

Activities / Comments

Air Operations (Mark Fuller):

No flights took place.

Waste Management (John Wallace):

Decon: No activities.

T&D: A drum of soil was hauled into FTC from C3.2 AECOM and disposed of in pile #136. A roll-off of MSW was hauled to C&C landfill for disposal.

Waste Management Characterization: Continuing waste management characterization, documentation and coordination.

Activities / Comments (Cont.)	**Overbank (Jack Spates):** Recovery: No activity. No sampling. Compliance: No activity. Monitoring: No monitoring. **Submerged Oil (David Bareham):** Science: No sampling. Recovery: Conducted poling activities throughout the Kalamazoo River, the Morrow Lake Delta and Morrow Lake. **Containment (Kevin Oscar) :** Completed oversight/EI inspections with EPA and Enbridge reps. Provided 9 boats for the poling crews. Provided 1 boat for the situational awareness group. Sheen Sweep: E4/Delta: Two boats swept all day 124' snare used. Ceresco to MP 5.25: 80' snare use. MP 36.25: 25' snare used. MP 26.25: 14' snare used. MP 28.25: 14' snare used. Talmadge Creek: No activity. MP 5.75 (Ceresco): Recovered 26 bags of debris. MP 15.65 (Battle Creek Dam): Recovered 3 bags of debris. MP 37.75 (E4.0): Recovered 7 bags of debris. Inspected all containment on the river, completed adjustments as required. All debris was taken to Frac Tank City for temporary storage in the Oily Waste Roll off for disposal at a later date. Completed gas monitoring during all recovery operations. Collected eight (8) sediment samples from walling tube samplers. Samples were submitted to ALPHA labs. **Kalamazoo River (Bryan Stiemsma):** Remedial Investigation: Collected five (5) soil samples from MP 11.50L. Collected five (5) sediment samples from MP 11.50L. MP 32.25 LDB – Howard ERO site- Installed turf grass seed, C-125BN erosion control blanket and 10 bales of straw to complete restoration of the subject site. Remedial Action: No sampling. Monitoring: Continued remote turbidity monitoring at the Confluence. Conducted rain event monitoring trip # 3 on Talmadge Creek. **River Opening Branch (John Bohrmann):** Communications (Media) Group: No activities. Assessment Group: Segment 2 Primer submitted for agency approval. Continue development of segment 9 Primer. Implementation Group: No activities. Monitoring Group: No activities.

Safety & Security (Dale Gross)

General Safety Message:

Insect Repellent

With the increase in temperatures, the numbers of mosquitos and ticks are increasing. It is important to be protected by using a repellant that contains DEET (always follow the instructions on the product label).

- Cover exposed skin or clothing. Do not apply repellant under clothing.
- Do not apply repellent to cuts, wounds, or irritated skin.
- Wash treated skin with soap and water after returning indoors.
- Do not spray aerosol or pump products in enclosed areas.
- Do not apply aerosol or pump products directly to the face. Spray hands and then rub them carefully over the face, avoiding the eyes and mouth. Do not forget the ears.

Activity Areas	**Safety & Security, Air Operations, Waste Management, Overbank, Submerged Oil, Containment, Talmadge Creek, Kalamazoo River**
Health and Safety Issues	**Safety & Security (Dale Gross)** **General Safety Message:** **Hydration** By the time one becomes thirsty, dehydration has already begun. This loss of body fluid can lead to progressively worse symptoms of dehydration: thirst, fatigue, weakness, delirium. Losing just 10% of body water can cause muscle spasms. A 20 % loss could lead to death as kidney failure can occur when blood cannot circulate properly. **Tips to prevent Dehydration:** ➢ Track how much water you consume. ➢ Carry a bottle of water around with you. ➢ Remember, caffeine acts as a diuretic; so caffeinated beverages can cause fluid loss. **Safety Items for June 5th:** No issues to report.
Activities / Comments	**Air Operations (Mark Fuller):** No flights took place. **Waste Management (John Wallace):** Decon: No activities. T&D: A drum of soil from C3.2 AECOM was hauled into FTC and disposed of in cell B pile#136. A roll-off box of oily debris from C0.4 was hauled to C&C landfill for disposal. Waste Management Characterization: Continuing waste management characterization, documentation and coordination.

Activities / Comments (Cont.)	**Overbank (Jack Spates):** Recovery: No activity. No sampling. Compliance: No activity. Monitoring: No monitoring. **Submerged Oil (David Bareham):** Science: No sampling. Recovery: Conducted poling activities throughout the Kalamazoo River, the Morrow Lake Delta and Morrow Lake. **Containment (Kevin Oscar) :** Completed oversight/EI inspections with EPA and Enbridge reps. Provided 9 boats for the poling crews. Provided 1 boat for EPA tour in the Lake and Delta. Buoys: Two buoys installed at the 19.25 Sediment Trap BB127 and BB128. Sheen Sweep: E4/Delta: Two boats swept all day 74' snare used. Ceresco to MP 5.25: 10' snare used. MP 4.75 – 5.75: 42' snare used. MP 26 – 28.75: 24' snare used. Talmadge Creek: No activity. General Safety Message:

Life Saving Rule #4 – Ground Disturbance

Dig Safely. Always follow procedures for locating, positively identifying and excavating buried facilities. Protect yourself, your community and the environment by protecting our pipelines – ensure that all buried facilities are identified and marked prior to excavation.

By building a strong foundation of safe practices we can protect our most valuable resource – our people.

**** Make certain you know and obey the Enbridge 10-2-1 Rule ****

Safety Items for June 6th: Near Miss – SWAT, Trevor Evans. 18:30, while loading a boat onto the trailer at E0.4 Launch, the boat was not square on the trailer. T. Evans got help from 5 coworkers (SWAT and SET) to lift the boat to get on the trailer correctly. T. Evans didn't realize that he was standing on a rock and his foot slid off the rock and rolled his ankle. At the time his ankle did not hurt, but this morning it was stiff and he reported it. T. Evans is able to work today and no First Aid.

Activities / Comments

Air Operations (Mark Fuller):

General Safety Message:

Right/Responsibility to Stop Work

Every worker performing any work in/on any work site location has the authority and responsibility to immediately stop unsafe work and at risk behaviors.

A few examples are;

- Working with tools or equipment that have been altered or modified.
- Working in an unsafe manner (horse play, disregard for rules, etc.) that endangers yourself and others.

Regardless of how urgent or important an activity may be, safety, health or environmental protection shall not be compromised.

Activities / Comments

Air Operations (Mark Fuller):
We flew today at 1030 AM. Poling activities were observed in the pond in the Source Area. Crane mats were being destroyed at Frac Tank City, several poling crews were observed on the downstream half of the river and water levels were extremely low, so that ordinarily submerged portions of both the creek and river are exposed. Crews were cleaning the control points at Ceresco Dam and at the Mill Ponds. A sweep boat was observed near C 0.4 boat launch near some, and several other sweep boats observed near poling crews, in the MP 20's and on Morrow Lake.

Waste Management (John Wallace):
Decon: A Jon boat was cleaned and returned to service.

T&D: A roll-off of oily debris and 2 other roll-offs of timber mats were hauled to C&C landfill for disposal in the operational period.

Waste Management Characterization: Continuing waste management characterization, documentation and coordination.

Activities / Comments (Cont.)	**Overbank (Jack Spates):** Recovery: No activity. No sampling. Compliance: No activity. Monitoring: No monitoring. **Submerged Oil (David Bareham):** Science: No sampling. Recovery: Conducted poling activities throughout the Kalamazoo River, the Morrow Lake Delta and Morrow Lake. **Containment (Kevin Oscar) :** Completed oversight/EI inspections with EPA and Enbridge reps. Provided 9 boats for the poling crews. Provided 1 boat for situational awareness. Talmadge Creek: Removed all snare from the culverts on the creek 400' total. Boom: Removed 300' 12" hard boom from 30.8 LDB. Buoys: WSS 17, 19, and 20 installed around the Walling Samplers in the Lake. (Configuration consists of 3 floating rope Buoys and 1 concrete anchor). Sheen Sweep: E4/Delta: Two boats swept all day 100' snare used. Ceresco to MP 5.00: 56' snare used. MP 13.75 – 15.25: 10'. MP 18.75: 10' snare used. MP 26 – 28.25: 25' snare used. General Safety Message:

Slips, Trips and Fall Conditions

Most hazards can be avoided by using common sense. Please consider the following hazardous situations.

Boats

- Loss of balance due to instability
- Slippery surfaces (frost, rain, ice, snow, etc.)
- Tools/Equipment/Debris
- Overextending
- Access/Egress

Work Areas

- Tools/Equipment/Debris
- Fallen Trees/Branches
- Large Stones/Uneven Terrain/Steep Slopes/Holes
- Environmental Conditions (muddy, slick, etc.)
- Vehicle/Equipment – Access/Egress

Controls

- Identify and Control Hazards
- Focus on the Task – Avoid Distractions
- Maintain 3 Point Contact – Access/Egress
- Utilize Non-Slip Tapes
- Wear Proper Footwear for Conditions

General Safety Message:

Boat Trailer Inspections

A ten point inspection for boat trailers:

1.) Lighting – Check running, turn, reverse and stop indicator lights.

2.) Lug nuts. Are they tight?

3.) Boat trailer tire inspection – How's the tread? Check the air pressure with a gauge.

4.) Wheel bearings – When was the last time they were greased?

5.) Check bolts for tightness and welds for cracks. The bolts on the leaf springs are notorious for coming loose.

6.) Make sure your safety chain is in proper order and always hook it up. Make sure all pins are in place.

7.) Check the bunks on which the boat sits. Are the carpet and wooden boards in good condition? This is best looked at while the boat's off the trailer.

8.) Check for corrosion.

9.) Check straps for wear.

10.) Check that ball and trailer hitch ball coupler are the same size and the load doesn't exceed the hitch rating.

Safety Items for June 18th: No issues to report.

Life Saving Rule #6 – Report Incidents

Always report significant safety related incidents. We believe all injuries and incidents are preventable. Reporting incidents allows us to understand what happened and prevent it from happening again.

When you speak up for safety, everyone benefits.

You are the voice of lifesaving rules.

Safety Items for June 20th: No issues to report.

Activities / Comments

Air Operations (Mark Fuller):
No flights took place today.

Waste Management (John Wallace):
Decon: Hard boom was deconed in the operational period.

T&D: A roll-off of oily debris was hauled to C&C landfill for disposal. Soil was hauled in from legacy project at Ceresco Dam and disposed of at FTC.

Waste Management Characterization: Continuing waste management characterization, documentation and coordination.

Activities / Comments (Cont.)	**Overbank (Jack Spates):** Recovery: No activity. No sampling. Compliance: Collected one (1) soil sample from Ceresco River Access Point. Monitoring: No monitoring. **Submerged Oil (David Bareham):** Science: No activities. Recovery: Conducted poling activities throughout the Kalamazoo River, the Morrow Lake Delta and Morrow Lake. **Containment (Kevin Oscar) :** Completed oversight/EI inspections with EPA and Enbridge reps. Provided 8 boats for the poling crews. Provided 1 boat for situational awareness. Provided 1 boat for EI Inspections. Buoys: Delta: Installed additional Buoys (CB 28, 15-18). Sheen Sweep: E4 to MP 37.75: 30' snare used. Shady Bend: 25' snare used. MP 15.5-13.75: 20' snare used. Ceresco to MP 5.25: 24' snare used. Total Footage Snare used: 99. Talmadge Creek: No activity. MP 37.75 (E4.0): Recovered 12 bags of debris. Inspected all containment on the river, completed adjustments as required. All debris was taken to Frac Tank City for temporary storage in the Oily Waste Roll off for disposal at a later date. Completed gas monitoring during all recovery operations. **Kalamazoo River (Bryan Stiemsma):** Remedial Investigation: Collected five (5) soil samples from MP 06.00R. Collected two (2) soil samples from MP 06.25R. Collected two (2) soil samples from MP 13.75L. Collected one (1) sediment sample from MP 13.75L. E 3.5 Launch Site - Installed Mesic prairie seed and straw to restore the overbank portion of the demobilized launch site. Assisted Carr Excavators with the installation of construction fencing to protect the restored area. Remedial Action: No sampling. Monitoring: Collected five (5) groundwater samples from the monitoring wells adjacent to the Kalamazoo Municipal Well field #39. **River Opening Branch (John Bohrmann):** Communications (Media) Group: Coordination for news conference information packet. Present river opening news conference information packet and agenda to the MAC. Assessment Group: Continue to respond to MDEQ comments for primers 1-8. Implementation Group: Reconfigure buoy layout for segments 2 and 9. Monitoring Group: Perform DK Security river opening awareness training.

General Safety Message:

Emergency Eyewash Stations/Bottles

Emergency eyewash equipment can be key to saving your eyesight.

Before an emergency occurs:

- Know the equipment location.
- Know how to use the equipment: Always review the manufacturer's instructions for the equipment before an emergency occurs.
- Equipment maintenance: Perform regular checks to ensure the equipment will function as intended in the event of an emergency, and the saline solution has not expired.

In the event of an emergency:

- Remove caps.
- Pour contents of the bottle into the affected eye.
- Repeat if necessary.
- If required, seek further medical attention.

Don't forget to notify Enbridge Safety and submit a report documenting the incident.

Safety Items for June 21th: No issues to report.

Safety Items for June 22th: Benito Vavra was piloting a jet boat with passengers Norman Kent and Matthew Haak for situational awareness activities. They were traveling upstream on the Kalamazoo River, upstream of MP 29.25, and approached an area of rocks and rapids. B. Vavra slowed down while still on step. The boat was traveling between 1/2 and 3/4 throttle. B. Vavra steered the boat to the right to avoid large rocks that were visible above the water surface near the middle of the river. 12:33 - The boat hits an unseen, submerged rock. The boat striking the rock slid into another large rock, and caused the boat to stop suddenly, resulting in all three occupants of the boat to be ejected from the boat into the water. The depth of the water, excluding the rock, was approximately 18 inches. B. Vavra assists N. Kent to get N. Kent onto his feet. All three check on each other and determine that no one has life threatening injuries. B. Vavra secures the boat which had drifted from the location of the impact and is 1/4 filled with water. M. Haak is uninjured. 16:48 – B. Vavra is released from Battle Creek Health System with no work restrictions. 17:45 – N. Kent is released from Battle Creek Health System with no work restrictions.

General Safety Message:

Other Poisonous Plants

In addition to poison ivy, poison oak, and poison sumac, there are two plants that you should also be aware of that can cause serious skin problems – Giant Hogweed and Wild Parsnip. These invasive plants contain photosensitizing chemicals which in contact with human skin and in conjunction with sunlight cause phytophotodermatitis - a serious skin inflammation.

Giant Hogweed

Giant hogweed can grow to 14 feet or more. Its hollow, ridged stems grow 2-4 inches in diameter and have dark reddish-purple blotches. Its large compound leaves can grow up to 5 feet wide. Its white flower heads can grow up to 2 1/2 feet in diameter.

Wild Parsnip
Wild parsnip has large leaves that resemble celery leaves. The stem is hollow and grooved, two to five feet tall. The flowers are small, yellow, five-petaled, and look like a yellow Queen's Anne's Lace.

Safety Items for June 23 and 24th: No issues to report.

General Safety Message:

Securing Loads

Securing Loads for Transport

- Inspect all anchor points and tie-down locations for visible signs of damage.
- Always inspect every chain before use. Look for cracked, bent, twisted or stretched links.
- Keep chains/straps straight and tight. Ratchet binders are recommended for chains.
- Be sure to flag and permit the load if it exceeds the width and length restrictions for transporting according to federal/state/local regulations.
- Ensure that all items on the trailer and the load are secured.
- Check load and trailer for fluid leakages, rocks and other loose debris.

Transporting a Load

- Ensure the load is properly secured and balanced.
- Many governmental agencies throughout the world require the truck driver, within the first 25 miles (40.2 km) after beginning a trip, stop and recheck all load securing devices and make adjustments as necessary.
- ALWAYS use common sense and good judgment when loading, hauling, and transporting equipment and materials.

Safety Items for June 25th: No issues to report.

General Safety Message:

Safety Culture

Safety is not a priority or an initiative; it must be a core value.

There must be a shared belief that all incidents are preventable and a shared goal to achieve zero incidents. There must be a commitment to doing things right the first time, every time and a will to continually improve safe work practices.

A strong safety culture involves and engages all personnel. It requires individuals to take personal responsibility for safety and to freely intervene to ensure the safety of their co-workers.

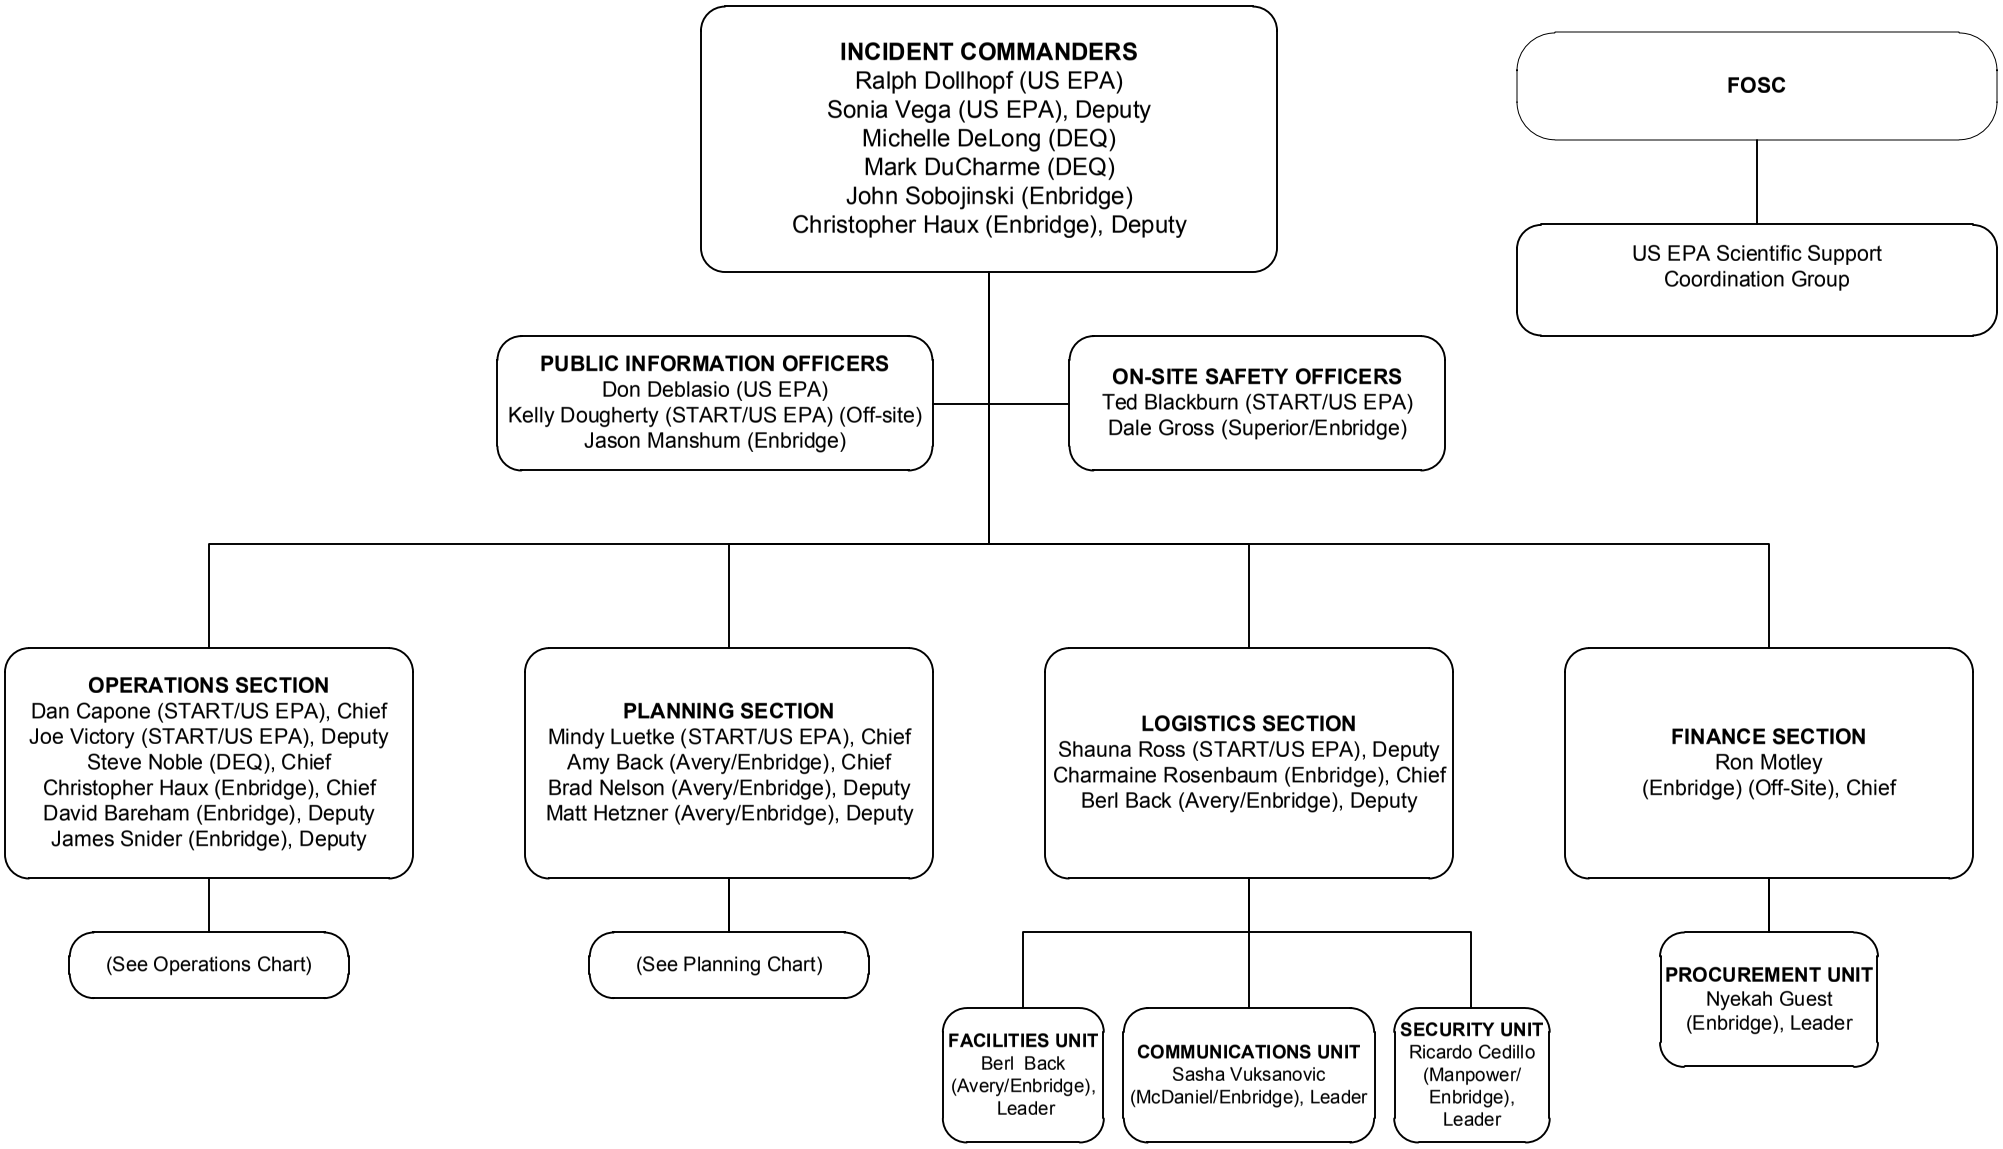
Kalamazoo River/Enbridge Spill	From: May 31, 2012 @ 0700 To: June 07, 2012 @ 0700	

3. Incident Objective(s)

1. Ensure health and safety of the public and response and recovery personnel.
2. Ensure absolute containment of submerged oil and oil-containing sediments within the Delta and the Fan of Morrow Lake.
3. Ensure effective transition of regulatory oversight from EPA to Michigan DEQ jurisdiction as appropriate.
4. Continue developing strategy for opening of Kalamazoo River.
5. Perform recovery and containment of oil from affected public and private areas of river and river system.
6. Perform remediation and restoration of affected public and private areas of river and river system.
7. Maintain effective communications with cooperating and assisting agencies, the public, including regular coordination with the Multi-Agency Coordination Group (MAC).
8. Provide protection of environmentally and culturally sensitive areas including wildlife and historic properties.
9. Collect, coordinate, manage and communicate environmental and public health data including maintenance of Joint Information Center function.

4. Operational Period Command Emphasis



1. Respond to and document emerging oil throughout the Kalamazoo River system.
2. Continue efforts to secure proper permitting for the second phase of the Kalamazoo River Submerged Sediment Trap Structures.
3. Refine and implement River Opening Strategy.

5. Safety Objectives for the Operational Period

1. Focus on management of change and the use of the safe work permit.
2. Assure effective integration of public safety and worker safety on the river. Focus on recognition and reporting of in water hazards.
3. Focus on ensuring proper ratio of on-water safety inspectors to site workers.

7. Work Assignments

Enbridge and START/US EPA:

1. Photo-document areas of sheen from source area to Morrow Lake dam and report observations back to operations section chiefs for monitoring and response. Flights occur once a week and as needed.

8. Special Instructions

Air Ops Team shall report to Marshall Regional Airport Heli-Pad. Additional flights can be scheduled on a case by case basis by contacting Mark Fuller (AECOM/Enbridge) at 847-533-9428. Additional operations recon flights shall be scheduled as required. These flights will have priority over the other flights in order to establish work priorities.

Areas that are deemed sensitive due to property owner concerns shall be avoided. If it is necessary to fly over at the sensitive area, pilot shall be instructed to maintain a minimum altitude of 500 ft. Sensitive flight areas include: Squaw Creek Subdivision (MP 3.25), Village of Ceresco and MP 10.5-11.5 LDB.

SAFETY INSTRUCTIONS:
DO NOT access heli-pad without being escorted by the pilot. Never approach or exit the aircraft to/from the rear, near the tail rotor.

Severe Weather Alerts:
Follow instructions and procedures provided by the FAA and the Civil Defense System.

7. Work Assignments

Decon

1. Vessels, Frac tanks, boom, vac trucks, roll off boxes, yellow iron and miscellaneous equipment. Decon is ongoing at Frac Tank City (FTC), during daylight hours only.
2. All final Decon will be completed at Frac Tank City.
3. Field decon operations for: personnel, hand equipment, and boats for preparation of transport shall be installed prior to work beginning at boat launches / staging areas for individual work sites.
4. All Decon activities will be done under the instruction and by the Decon Division only.

For START/US EPA:

1. Provide oversight of decon activities.

T & D

1. Haul contaminated soil, water, media and debris to staging areas for waste characterization and oil recovery sampling prior to offsite disposal.
2. Waste generated from boat launches / staging areas decontamination sites shall be collected at a minimum of daily for direct haul to the landfill or transported to Frac Tank City for consolidation with similar waste streams as necessary.
3. Waste generated from coring will be consolidated daily and transported to Frac Tank City.

For START/US EPA:

1. Provide oversight of T&D activities.
2. Ensure appropriate sampling, tracking and disposal is performed on oil impacted debris, water and soil.
3. Review manifests, weight tickets and bills of lading for correlation to waste stream analytical data.
4. Review weekly oil recovery and waste disposal report.

Waste Management Characterization

1. Waste management characterization, manifesting, and coordination of transportation and disposal.

For START/US EPA:

1. Provide oversight of waste management characterization and manifesting activities.

All Groups Designated Meeting Location: FTC.

8. Special Instructions

Interim decon processes shall follow best practices.

All personnel will report to designated meeting location at 0700 and work activities will conclude at 1900. All work permit activities will be completed within the allotted permit time and in accordance with the Fatigue Management Plan.

Ensure all Best Management Practices (BMPs) are in place and utilized.

SAFETY INSTRUCTIONS:

For vacuum truck operation guidelines, please refer the HASP.

At Frac Tank City:

1. The following procedure shall be used for initial opening of hatch or rear doors of liquid vacuum trucks and hatches of vacuum excavation units:
    a. Approach the hatch to be opened with a calibrated five gas monitor and a benzene monitor.
    b. Personnel performing this task must wear a full face respirator with organic vapor cartridge.
    c. Slightly open the hatch and take VOC, H2S, LEL, Oxygen, CO and benzene readings.
    d. If readings are greater than 10 ppm H2S, 10% LEL, 25 ppm CO or 25 ppm benzene then personnel shall close the hatch and utilize SCBA prior to opening the hatch.
2. Operations - Respiratory protection may be required depending on periodic monitoring results. Wear a half-mask respirator equipped with an organic vapor cartridge when 0.5 ppm benzene is detected. Wear a full-face respirator equipped with an organic vapor/acid gas cartridge when benzene is at 5 ppm to 25 ppm.

Please refer to the respective agencies/contractors Fatigue Management Plan to ensure proper rest periods.

Process for Reporting Potentially Hazardous Materials:

If you observe a potentially hazardous material which is not spill related, notify field safety officer and evacuate the area. Do not let anyone into the area unless it is Enbridge Safety and/or Operations Inspector. Immediately report all details to the Enbridge Safety Office at 269-781-1913. The Enbridge Safety Office will alert the Emergency Response Center or call (911). Notifications will go to Calhoun County EMS or Kalamazoo County EMS, EPA, DEQ and Pollution Emergencies.

Submerged Oil Assessment

1. Continue refinement of 2012 Submerged Oil Recovery Plan.
2. Conduct poling activities throughout the Kalamazoo River, Morrow Lake Delta, and Morrow Lake. (10 Teams)
3. Review sheen tracking information from the field.
4. Continue sampling and monitoring of cylindrical sampling devices.
5. Collect velocity data within Morrow Lake. (1 team)

For START/US EPA and DEQ:

1. Oversee and document Submerged Oil Assessment work activities.

Submerged Oil Science

1. Continue implementation of the hydrodynamic model to determine movement of submerged oil.
2. Continue development of Submerged Oil Quantification.

For START/US EPA:

1. Oversee and document Submerged Oil Science work activities.

Submerged Oil Compliance

1. Continue to complete ecological assessments at sites determined by the Submerged Oil Assessment Group.
2. Track previously submitted MDEQ applications for sediment removal.

Submerged Oil Recovery

1. Implement sheen management activities as necessary.

Submerged Oil Monitoring

1. All odor complaints will be reported to US EPA and MDCH within 30 minutes of receipt by the odor response team. 7. Work Assignments

Containment Science

1. Refine the hydrodynamic model and concepts of the Plan for Preventing Migration of Oil Past the Morrow Lake Dam.
2. Introduce new variables to enhance the potential sediment trap locations.
3. Develop subsurface containment strategies throughout the Kalamazoo River system to prevent recontamination of the Morrow Lake fan.

Containment Compliance

1. Monitor submitted MDEQ permit application for toolbox activities in the Kalamazoo River.
2. Monitor submitted MDEQ application for permit for the Kalamazoo River Sediment Control Structures (13 sites).

Containment Recovery

1. Utilize resources to contain and collect sheen and surface oil as necessary.
2. Perform containment strategies throughout the Talmadge Creek and Kalamazoo River including the following tasks:
   a) Deploy shoreline containment boom as required.
   b) Complete sheen management as required.
3. Maintain three Control Points: MP 5.75 (Ceresco), MP 15.65 (BC Dam), and MP 37.75 (E4).
4. Maintain Protective Containment sites (11 sites total).
5. Maintain installed Kalamazoo River Sediment Control Structures.

Containment Monitoring

Identify control points and protective containment locations requiring further clean up or maintenance action.

1. Record and document sheen observations in main channel and overbank areas, and conduct sheen testing, if necessary. Report sheen observations back to operations section chiefs for monitoring and response.
2. All odor complaints will be reported to US EPA and MDCH within 30 minutes of receipt by the odor response team. Communication Check: Communication Check will be tested Mondays and Thursdays by Enbridge Safety Office at 1200 hours.

SPECIAL NOTATION ON WEATHER MESSAGING:
See daily updates for additional weather information.

Enbridge Safety is responsible for weather on-site and they are supported by the NOAA / NWS Grand Rapids Weather Office.

Enbridge Safety will maintain consistent weather messages by following the established format of presenting daily and extended forecast, river depth, hydrologic predictions, and the five day quantitative precipitation forecast. The compilation of information will be presented through daily briefings. Enbridge Safety will continue the current practice of issuing a daily forecast to the field safety staff by posting NWS updates in various locations around the Incident Command Post.

In the event of severe weather warnings and alerts, the NWS Grand Rapids Center will contact the Enbridge Safety Office using the Enbridge Safety Radio System between the hours of 0700-1800 hours. If severe weather warning and alerts are occurring from 1800-0700, NWS Grand Rapids Center will contact the Enbridge Safety Office by phone at: **269-781-1913** and DK Security by phone at: **269-781-1911**. These numbers are in operation 24/7. Enbridge Safety will initiate the notification process by using the Call-EM-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews.

- *Severe Weather Alerts:* report to shelter when the county activates their warning sirens.
- *Fire/Building Evacuation Alert*: Report to assigned evacuation point. Follow Air Horn Procedure: Series of Three 1 second blasts.

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Instructions
Operational Period: 5/31/12 (0700hrs) to 6/7/12 (0700hrs)

River Opening: Be advised that the Kalamazoo River between MP – 2.75 and MP 2.25 has been opened to the public. Public recreational activities are to be expected on the river in this segment. Be courteous and respectful to members of the public at all times. Be aware that members of the public may be present in closed segments of the river or work areas.

Weather: Review weather information prior to commencing work each day. Be aware of changes in the weather conditions and ensure proper controls are implemented to address the weather hazards such as: Cold, Wind, Rain, Ice, Fog, Frost, etc. Take actions in accordance with instructions provided by supervisory personnel and as received through the Call-Em-All and PTT systems.

Sunscreen: Sunscreen should be applied to exposed skin, and not just if you are going to be in the sun. UVB rays cannot penetrate glass windows, but UVA rays can, leaving you prone to these damaging effects if unprotected.

PPE: Be prepared for changing weather conditions by wearing, and/or having available, appropriate cold weather gear and approved safety footwear with appropriate soles for use on slippery ground conditions due to frost, ice and rain. When PFDs are required you must ensure that they are United States Coast Guard approved and are the outermost layer, with reflective vest worn under the PFD.

Vehicles: Follow speed limits and adjust speed as necessary for road conditions. Clear all windows of frost before driving. Make sure your vehicle is in proper working condition.

SPECIAL NOTATION ON WEATHER and HAZARD ALERT MESSAGING:
(See daily updates for additional weather information).

Enbridge Safety will maintain consistent weather messages by compiling information and present through daily briefings. Weather forecast updates will be distributed to field safety staff for further communication in the field. Enbridge Safety is responsible for communicating weather alerts based on information received through the Weather TAP system and text messages received from the National Weather Service in Grand Rapids.

In the event of severe weather warnings and alerts, Enbridge Safety will be monitoring via the Weather TAP system. Enbridge Safety will initiate the notification process by using the Call-Em-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews. DK Security will be notified by Enbridge Safety by phone from 1800 – 0700 hours.

Severe Weather Alerts: Take appropriate shelter when the county activates their tornado warning sirens. In the Incident Command Post, report to the designated tornado shelter rooms. Where appropriate shelter is not available, lie flat in a nearby ditch or depression and cover your head with your hands. Be aware of potential for flooding and flying debris.

Note: Emergency notification siren systems will be tested on the first (1st) Saturday of each month in Calhoun and Kalamazoo Counties. Typically a siren is sounded at 1200 hours; however, this could be delayed due to current circumstances in the county.

Fire/Building Evacuation Alert: In the event of a fire, utilize air horn to initiate series of three 1 second blasts. Must report to the designated evacuation point upon hearing a series of three 1 second air horn blasts. **Please close all doors, and turn lights out upon leaving your area.**

Call the Safety Office at 269-781-1914 if you have weather related concerns. Call 269-781-1913 for other Safety related issues.

Safety Orientations: Held Monday - Friday at 0800 at the Operations Center (1601 Pratt Avenue)

Boat Safety Awareness Orientation: Available by appointment Monday – Friday, contact the Safety Office.

If you see wildlife (dead or alive) that is impacted by the oil, call Bob Doherty [redacted]

Field Safety Staff	
Name	**Phone**
Red Calvert	[redacted]
Steve Runstrom

Communication Check: Communication Check will be tested twice a week via the Verizon Push To Talk (PTT) system by Enbridge Safety office on Monday's and Thursday's at 1200 hours.

Call-Em-All: Will be tested by Enbridge Safety office on Wednesday's at 1200 hours.

First Aid Kits: There are four (4) kits located within the Incident Command Post Facility. Please review the Evacuation Plan map for locations.

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Message
Operational Period: 5/31/12 (0700hrs) to 6/7/12 (0700hrs)

DAY 1:
Thursday, May 31, 2012

Life Saving Rule #3 – Confined Space Entry

Always follow procedures for Confined Space Entry;

- Always complete the required permit
- Receive proper authorization and ensure personnel are in place to perform the rescue plan before entering a confined space

Remember: It is up to us to keep unsafe behavior out of the workplace

DAY 2:
Friday, June 1, 2012

Community Event

The annual Greater Marshall Area Community Garage Sales is scheduled for today and tomorrow. This event will bring a number of visitors to the area resulting in increased vehicle and pedestrian traffic. All workers should:

- Be aware of increased traffic volumes. Adjust speed accordingly.
- Watch out for pedestrians while operating motor vehicles.
- Be courteous to drivers pulling into and out of residences holding the sales.

DAY 3/ DAY 4:
Saturday, June 2 – Sunday, June 3, 2012

Near Misses

Most safety incidents occur as a result of an unsafe condition or unsafe action coming together with a person. The end result is the person gets injured.

Often unsafe acts or unsafe conditions have several misfires and the result is a near miss. The only difference between a near miss and an incident is chance. All near misses need to be taken seriously

- Near misses are injuries without people.
- Near misses are not funny; they are often deadly.
- Always report a near miss.
- Take immediate action to prevent a similar near miss.
- If you did not cause a near miss but saw it, report it. You may be saving a life.

Remember: Near misses are warnings that something or someone is not performing the job correctly. Don't let near misses repeat themselves or you may find yourself or a co-worker being treated for an injury that could have been avoided.

DAY 5:
Monday, June 4, 2012

The Spotter

A vehicle/equipment spotter is required whenever the driver's/ operator's vision is obstructed or when reversing in a congested work area. A review what the spotter should be doing and looking out for:

- Look out for themselves.
- Look out for others.
- Make sure the vehicle/equipment is not damaged.
- Make sure the project and project materials are not damaged.
- Give clear and understandable signals.
- Always signal on the driver's side.
- Use hand signals and give consistent signals.
- The spotter must watch where they are walking.

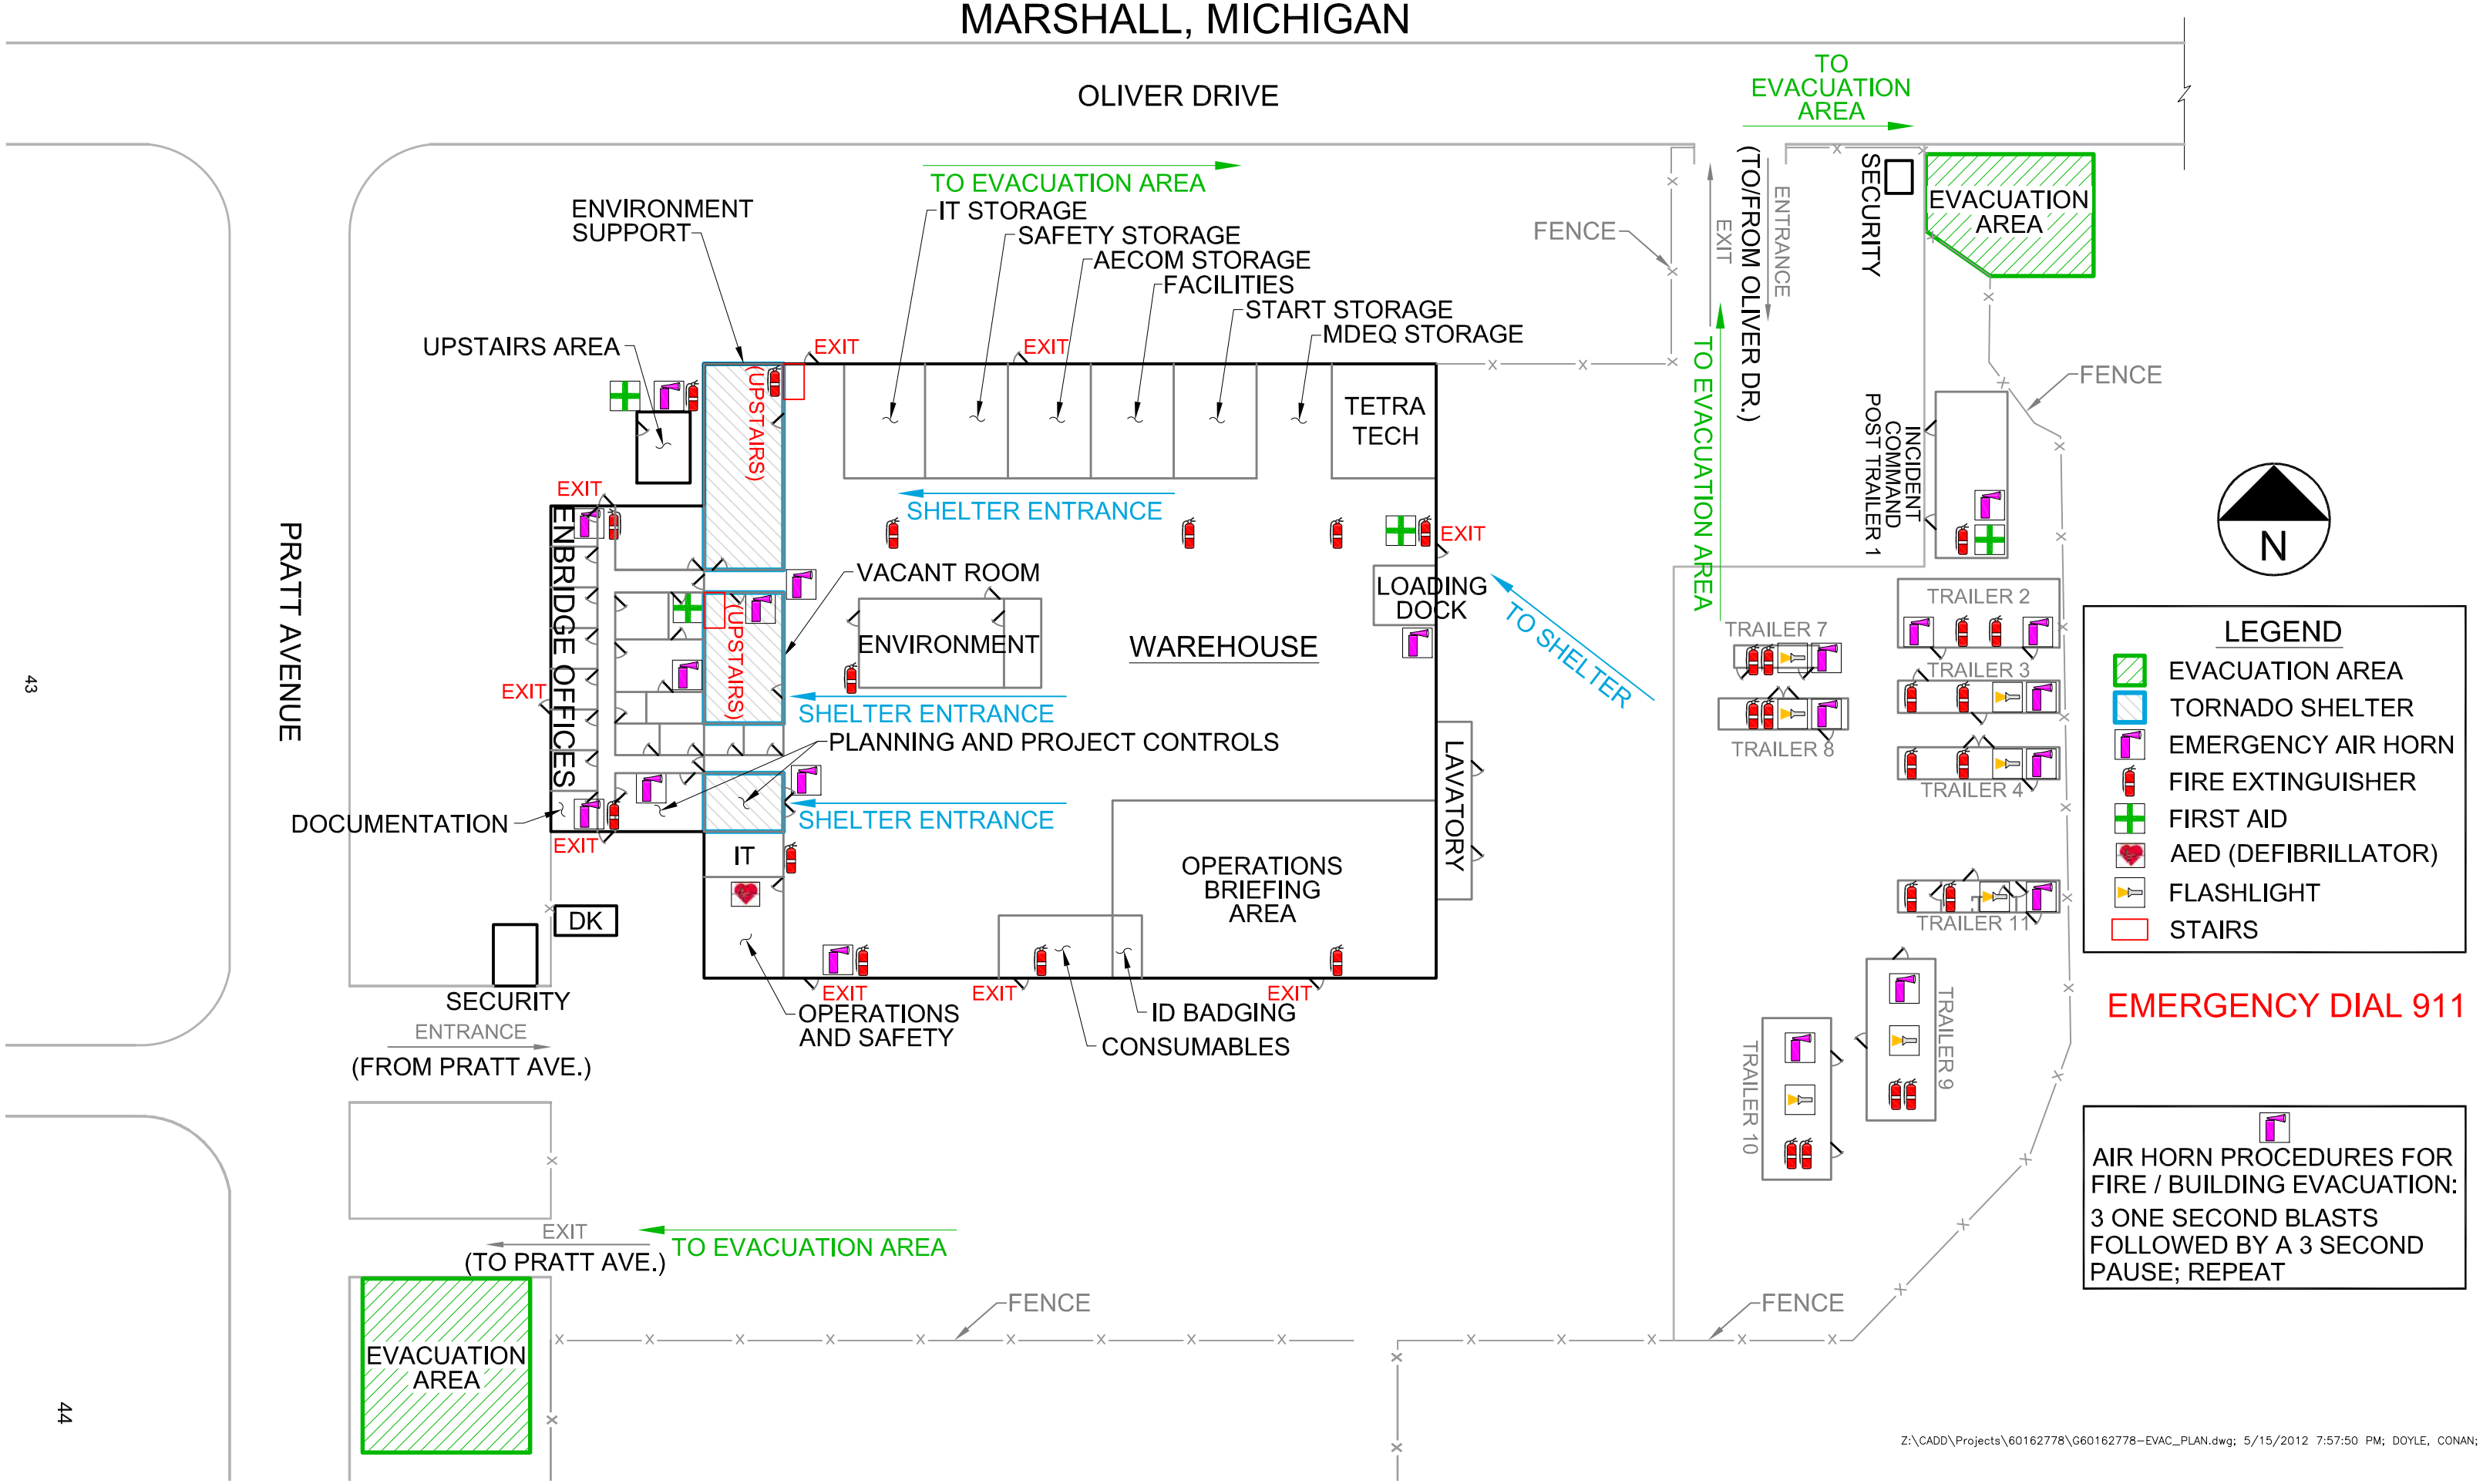
It is the responsibility of the spotter to direct a vehicle without injury or property damage. This is a big responsibility—no one should take it lightly.

DAY 6:
Tuesday, June 5, 2012

Insect Repellent

With the increase in temperatures, the numbers of mosquitos and ticks are increasing. It is important to be protected by using a repellant that contains DEET (always follow the instructions on the product label).

- Cover exposed skin or clothing. Do not apply repellant under clothing.
- Do not apply repellent to cuts, wounds, or irritated skin.
- Wash treated skin with soap and water after returning indoors.
- Do not spray aerosol or pump products in enclosed areas.
- Do not apply aerosol or pump products directly to the face. Spray hands and then rub them carefully over the face, avoiding the eyes and mouth. Do not forget the ears.



DAY 7:
Wednesday, June 6, 2012

Hydration

By the time one becomes thirsty, dehydration has already begun. This loss of body fluid can lead to progressively worse symptoms of dehydration: thirst, fatigue, weakness, delirium. Losing just 10% of body water can cause muscle spasms. A 20 % loss could lead to death as kidney failure can occur when blood cannot circulate properly.

Tips to prevent Dehydration:
- Track how much water you consume.
- Carry a bottle of water around with you.
- Remember, caffeine acts as a diuretic; so caffeinated beverages can cause fluid loss.

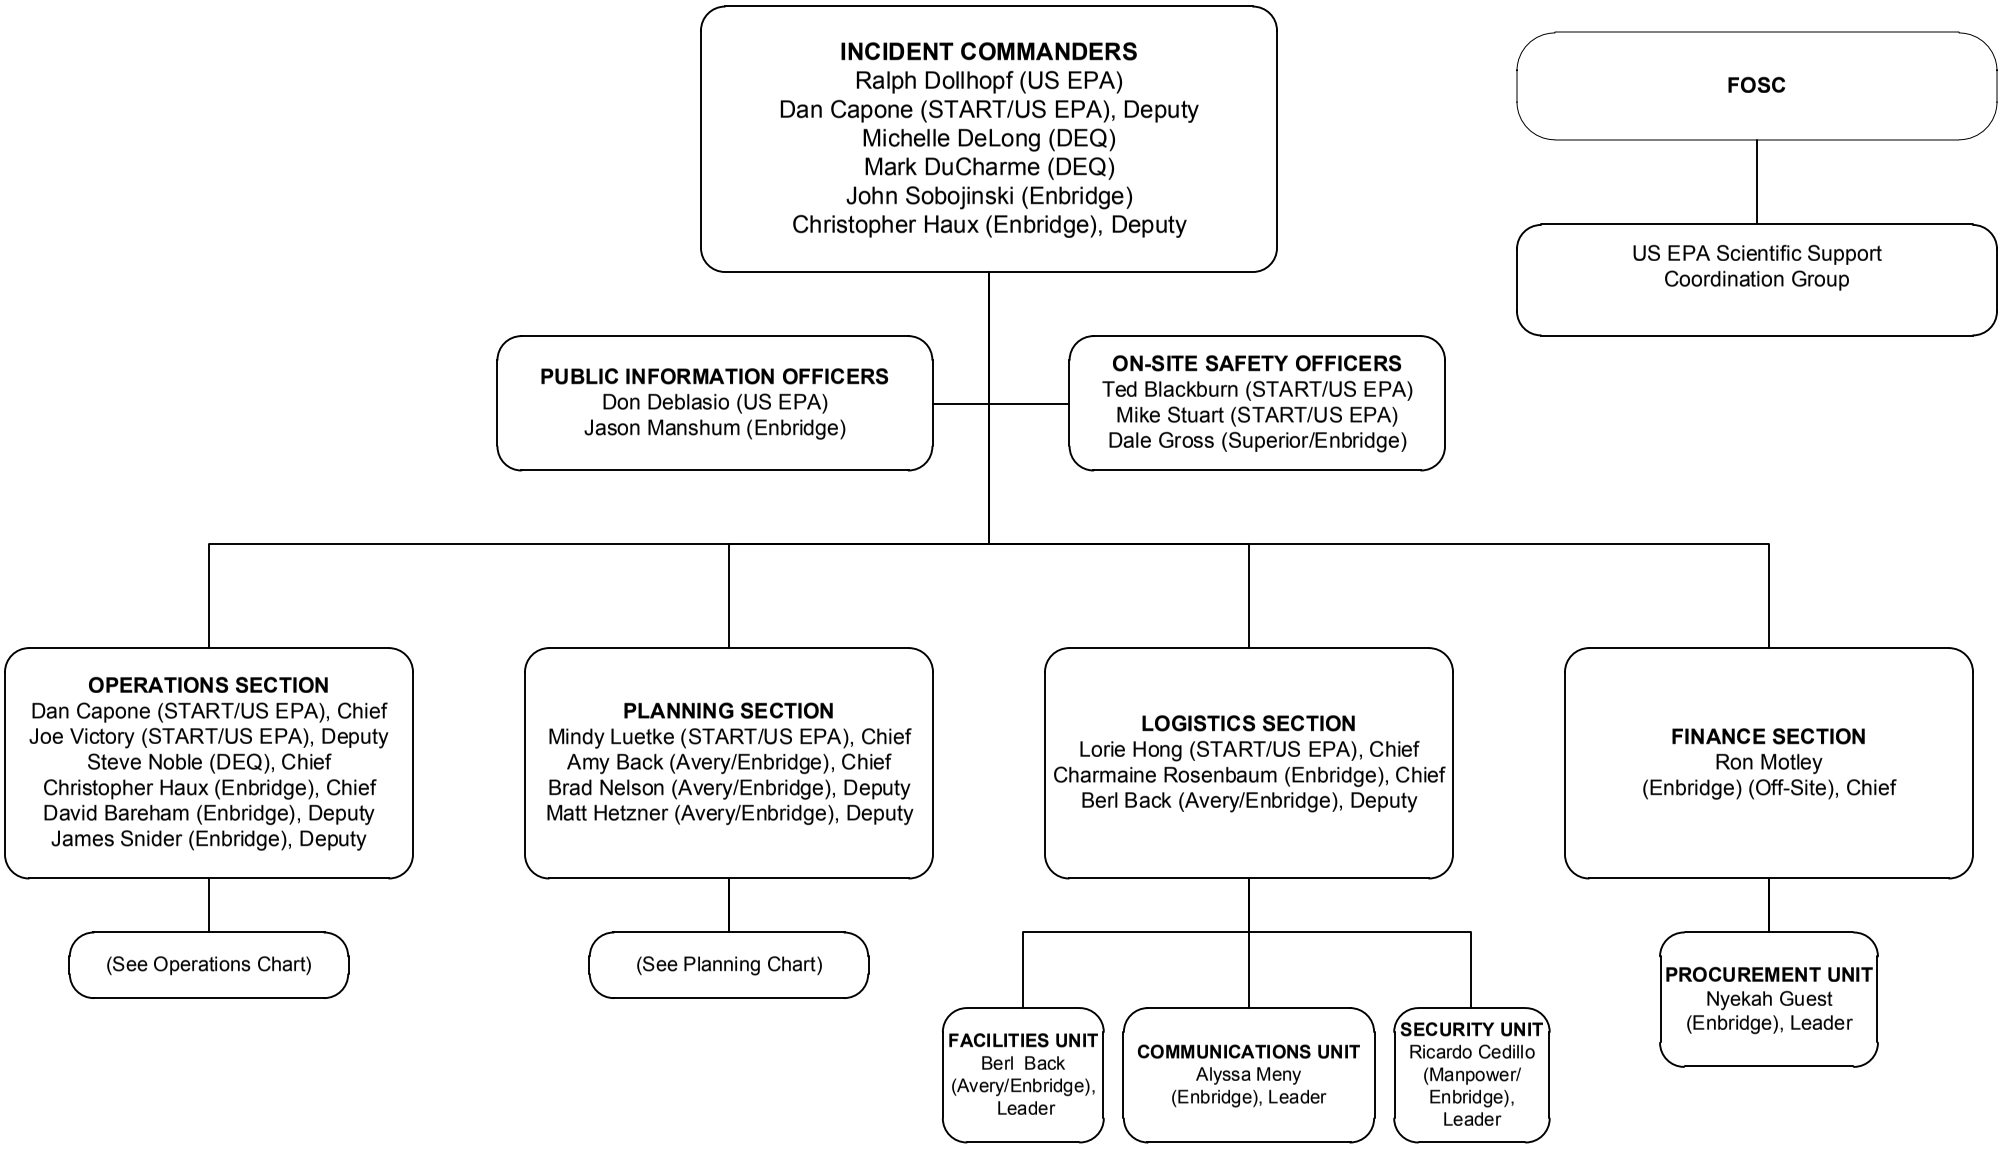
Kalamazoo River/Enbridge Spill	From: June 14, 2012 @ 0700 To: June 21, 2012 @ 0700	

3. Incident Objective(s)

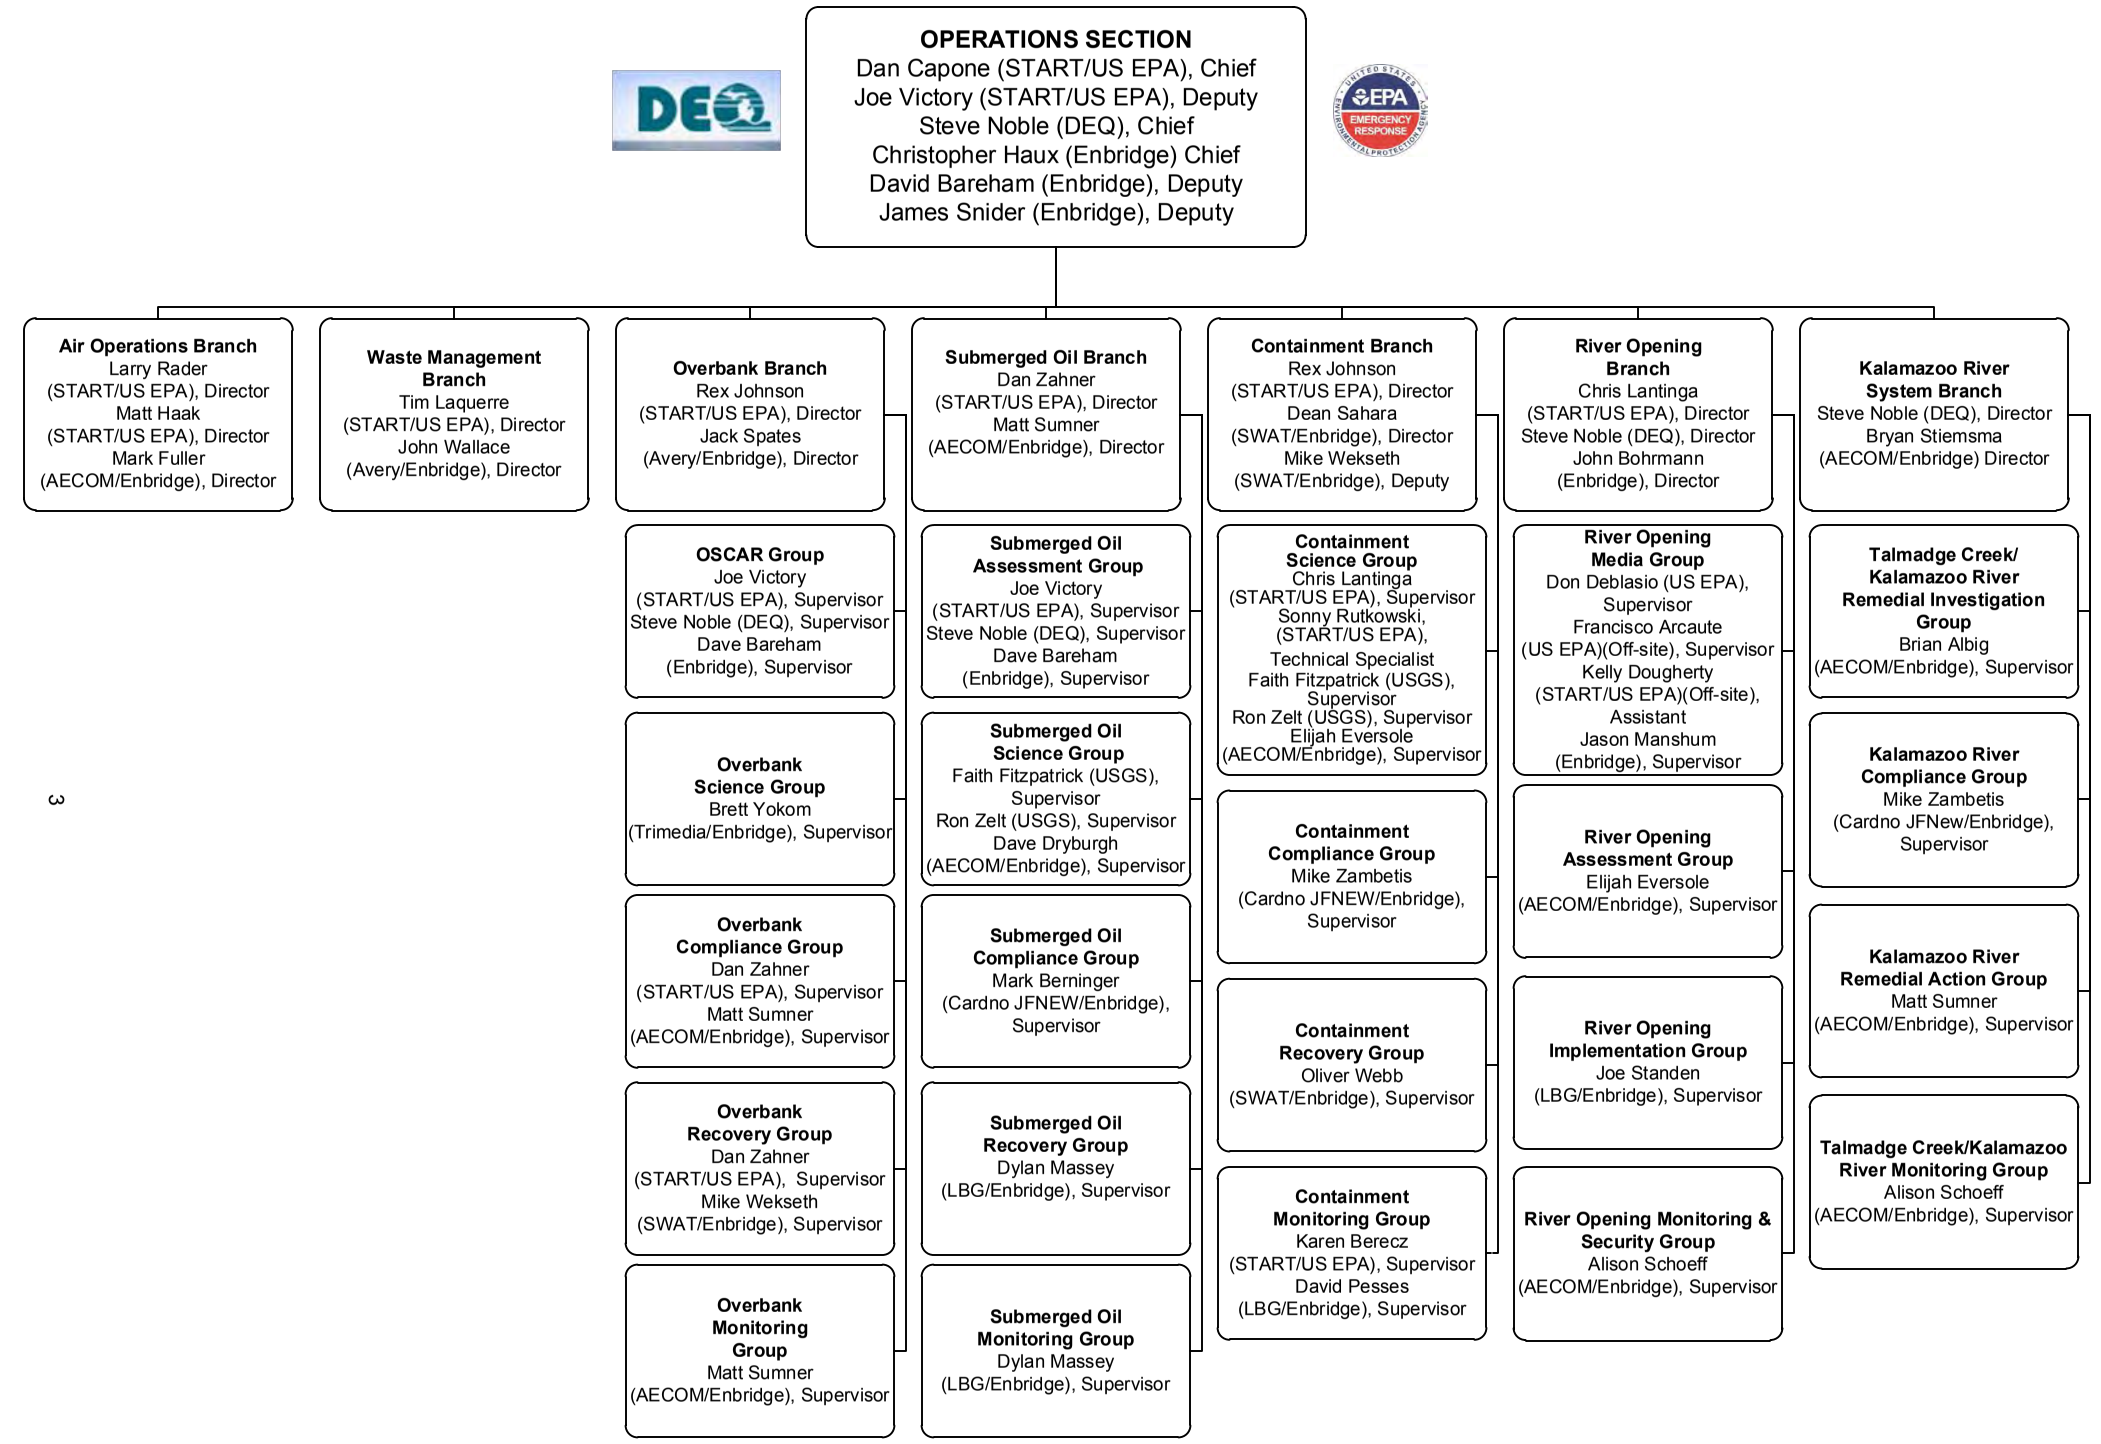
1. Ensure health and safety of the public and response and recovery personnel.
2. Ensure absolute containment of submerged oil and oil-containing sediments within the Delta and the Fan of Morrow Lake.
3. Ensure effective transition of regulatory oversight from EPA to Michigan DEQ jurisdiction as appropriate.
4. Continue developing strategy for opening of Kalamazoo River.
5. Perform recovery and containment of oil from affected public and private areas of river and river system.
6. Perform remediation and restoration of affected public and private areas of river and river system.
7. Maintain effective communications with cooperating and assisting agencies, the public, including regular coordination with the Multi-Agency Coordination Group (MAC).
8. Provide protection of environmentally and culturally sensitive areas including wildlife and historic properties.
9. Collect, coordinate, manage and communicate environmental and public health data including maintenance of Joint Information Center function.

4. Operational Period Command Emphasis



1. Respond to and document emerging oil throughout the Kalamazoo River system.
2. Continue efforts to secure proper permitting for the second phase of the Kalamazoo River Submerged Sediment Trap Structures.
3. Refine and implement River Opening Strategy.
4. Evaluate and continue planning for implementation of containment options to prevent the migration of oil into the fan and Morrow Lake.

5. Safety Objectives for the Operational Period



1. Focus on management of change and the use of the safe work permit.
2. Assure effective integration of public safety and worker safety on the river. Focus on vehicle and boat inspections and maintenance.

7. Work Assignments

Enbridge and START/US EPA:

1. Photo-document areas of sheen from source area to Morrow Lake dam and report observations back to operations section chiefs for monitoring and response. Flights occur once a week and as needed.

8. Special Instructions

Air Ops Team shall report to Marshall Regional Airport Heli-Pad. Additional flights can be scheduled on a case by case basis by contacting Mark Fuller (AECOM/Enbridge) at 847-533-9428. Additional operations recon flights shall be scheduled as required. These flights will have priority over the other flights in order to establish work priorities.

Areas that are deemed sensitive due to property owner concerns shall be avoided. If it is necessary to fly over at the sensitive area, pilot shall be instructed to maintain a minimum altitude of 500 ft. Sensitive flight areas include: Squaw Creek Subdivision (MP 3.25), Village of Ceresco and MP 10.5-11.5 LDB.

SAFETY INSTRUCTIONS:
DO NOT access heli-pad without being escorted by the pilot. Never approach or exit the aircraft to/from the rear, near the tail rotor.

Severe Weather Alerts:
Follow instructions and procedures provided by the FAA and the Civil Defense System.

7. Work Assignments

1. Field decon operations for: personnel, hand equipment, and boats for preparation of transport shall be installed prior to work beginning at boat launches / staging areas for individual work sites.
2. Haul contaminated soil, water, media and debris to staging areas for waste characterization and oil recovery sampling prior to offsite disposal.
3. Waste shall be collected at a minimum of daily for direct haul to the landfill or transported to Frac Tank City (FTC) for consolidation with similar waste streams as necessary. Waste generated from coring will be consolidated daily and transported to Frac Tank City.
4. Waste management characterization, manifesting, and coordination of transportation and disposal.

For START/US EPA:

1. Provide oversight of all waste management activities.
2. Ensure appropriate sampling, tracking and disposal is performed on oil impacted debris, water and soil.
3. Review manifests, weight tickets and bills of lading for correlation to waste stream analytical data.
4. Review weekly oil recovery and waste disposal report.

8. Special Instructions

Ensure all Best Management Practices (BMPs) are in place and utilized.

In accordance with the Fatigue Management Plan, all work permit activities will be completed no later than 1900.

SAFETY INSTRUCTIONS:

For vacuum truck operation guidelines, please refer the HASP.

At Frac Tank City:

1. The following procedure shall be used for initial opening of hatch or rear doors of liquid vacuum trucks and hatches of vacuum excavation units:
   a. Approach the hatch to be opened with a calibrated five gas monitor and a benzene monitor.
   b. Personnel performing this task must wear a full face respirator with organic vapor cartridge.
   c. Slightly open the hatch and take VOC, H2S, LEL, Oxygen, CO and benzene readings.
   d. If readings are greater than 10 ppm H2S, 10% LEL, 25 ppm CO or 25 ppm benzene then personnel shall close the hatch and utilize SCBA prior to opening the hatch.
2. Operations - Respiratory protection may be required depending on periodic monitoring results. Wear a half-mask respirator equipped with an organic vapor cartridge when 0.5 ppm benzene is detected. Wear a full-face respirator equipped with an organic vapor/acid gas cartridge when benzene is at 5 ppm to 25 ppm.

Process for Reporting Potentially Hazardous Materials:

If you observe a potentially hazardous material which is not spill related, notify field safety officer and evacuate the area. Do not let anyone into the area unless it is Enbridge Safety and/or Operations Inspector. Immediately report all details to the Enbridge Safety Office at 269-781-1913. The Enbridge Safety Office will alert the Emergency Response Center or call (911). Notifications will go to Calhoun County EMS or Kalamazoo County EMS, EPA, DEQ and Pollution Emergencies.

Submerged Oil Assessment Special Purpose Meeting: Daily at 1100, Trailer #2

Submerged Oil Assessment

1. Continue refinement of 2012 Submerged Oil Recovery Plan.
2. Conduct poling activities throughout the Kalamazoo River, Morrow Lake Delta, and Morrow Lake. (10 Teams)
3. Conduct coring activities throughout the Kalamazoo River, Morrow Lake Delta, and Morrow Lake.
4. Review sheen tracking information from the field.
5. Continue sampling and monitoring of cylindrical sampling devices, as required per the approved sampling plan.
6. Collect velocity data within Morrow Lake. (1 team)

For START/US EPA and DEQ:

1. Oversee and document Submerged Oil Assessment work activities.

Submerged Oil Science

1. Continue implementation of the hydrodynamic model to determine movement of submerged oil.
2. Continue development of Submerged Oil Quantification.

For START/US EPA:

1. Oversee and document Submerged Oil Science work activities.

Submerged Oil Compliance

1. Continue to complete ecological assessments at sites determined by the Submerged Oil Assessment Group.
2. Track previously submitted MDEQ applications for sediment removal.

For DEQ:

1. Oversee and document Submerged Oil Compliance work activities.

Submerged Oil Recovery

1. Implement sheen management activities as necessary.

Submerged Oil Monitoring

7. Work Assignments

Containment Science

1. Refine the hydrodynamic model and concepts of the Plan for Preventing Migration of Oil Past the Morrow Lake Dam.
2. Introduce new variables to enhance the potential sediment trap locations.
3. Develop subsurface containment strategies throughout the Kalamazoo River system to prevent recontamination of the Morrow Lake fan.

For START/US EPA:

1. Interface with Enbridge and assist with the development of surface and subsurface containment strategies throughout the Kalamazoo River system to prevent the continued migration of oil, oil sheen, submerged oil, and oil-containing sediments into Morrow Lake.

Containment Compliance

1. Monitor submitted MDEQ permit application for toolbox activities in the Kalamazoo River.
2. Monitor submitted MDEQ application for permit for the Kalamazoo River Sediment Control Structures (13 sites).

Containment Recovery

1. Utilize resources to contain and collect sheen and surface oil as necessary.
2. Perform containment strategies throughout the Talmadge Creek and Kalamazoo River including the following tasks:
   a) Deploy shoreline containment boom as required.
   b) Complete sheen management as required.
3. Maintain three Control Points: MP 5.75 (Ceresco), MP 15.65 (BC Dam), and MP 37.75 (E4).
4. Maintain Protective Containment sites (4 sites total).
5. Maintain installed Kalamazoo River Sediment Control Structures, including the cylindrical sampling devices.

Containment Monitoring

1. Identify control points and protective containment locations requiring further clean up or maintenance action.
2. Record and document sheen observations in main channel and overbank areas, and conduct sheen testing, if necessary. Report sheen observations back to operations section chiefs for monitoring and response.
3. All odor complaints will be reported to US EPA and MDCH within 30 minutes of receipt by the odor response team (Monday through Saturday 0700 – 1900). Complainants will then be contacted to schedule an odor response site visit or receive additional complaint information if no on-site response requested. SAFETY INSTRUCTIONS:
Photo Ionization (VOCs) / Four Gas Detectors (O2, CO, LEL and H2S) and Direct Reading Instrument for Benzene will be used for air monitoring during debris removal activities.

Hexane is flammable and may be harmful in contact with skin. When handling hexane and sheen test samples containing hexane, wear approved safety glasses, disposable nitrile gloves and keep away from ignition sources. Properly dispose of sheen test samples containing hexane.

Process for Reporting Potentially Hazardous Materials:
If you observe a potentially hazardous material which is not spill related, notify field safety officer and evacuate the area. Do not let anyone into the area unless it is Enbridge Safety and/or Operations Inspector. Immediately report all details to the Enbridge Safety Office at 269-781-1913. 2. Conduct Kalamazoo River System Erosion Tour number 8.

Kalamazoo River Remedial Action

1. Provide support activities as necessary.

Talmadge Creek/Kalamazoo River Monitoring

1. Monitor erosion control devices.
2. Perform quarterly ground water sampling at the Augusta and Kalamazoo Municipal Well Fields.

All Groups: Designated Meeting Location: ICP.

8. Special Instructions

NRDA Trustees will be conducting recreational use surveys along the Kalamazoo River at river access points through Autumn 2012.

Detailed work instructions will be provided to all team members through daily work orders.

No water operations will commence before 0700 and will conclude by 1900. All land based activities will begin at 0700 with adequate lighting. In accordance with the Fatigue Management Plan, all work permit activities will be completed by 1900.

Rowe Island, MP 38.50 to MP 38.75, is a No Go Zone – Environmental Sensitive Area.

SAFETY INSTRUCTIONS:
When operating or working in the vicinity of ultra violet testing equipment, wear approved safety glasses that provide protection from UV A rays and never look directly into the illuminator.

All in water activities of workers in water depths over fifty percent (50%) of thigh height will require tethering. Please refer to the HASP for further instructions.

Process for Reporting Potentially Hazardous Materials:
If you observe a potentially hazardous material which is not spill related, notify field safety officer and evacuate the area. Do not let anyone into the area unless it is Enbridge Safety and/or Operations Inspector. Immediately report all details to the Enbridge Safety Office at 269-781-1913. The Enbridge Safety Office will alert the Emergency Response Center or call (911). Notifications will go to Calhoun County EMS or Kalamazoo County EMS, EPA, DEQ and Pollution Emergencies.

Communication Check: Communication Check will be tested Mondays and Thursdays by Enbridge Safety Office at 1200 hours.

SPECIAL NOTATION ON WEATHER MESSAGING:
See daily updates for additional weather information.

Enbridge Safety is responsible for weather on-site and they are supported by the NOAA / NWS Grand Rapids Weather Office.

Enbridge Safety will maintain consistent weather messages by following the established format of presenting daily and extended forecast, river depth, hydrologic predictions, and the five day quantitative precipitation forecast. The compilation of information will be presented through daily briefings. Enbridge Safety will continue the current practice of issuing a daily forecast to the field safety staff by posting NWS updates in various locations around the Incident Command Post.

In the event of severe weather warnings and alerts, the NWS Grand Rapids Center will contact the Enbridge Safety Office using the Enbridge Safety Radio System between the hours of 0700-1800 hours. If severe weather warning and alerts are occurring from 1800-0700, NWS Grand Rapids Center will contact the Enbridge Safety Office by phone at: **269-781-1913** and DK Security by phone at: **269-781-1911**. These numbers are in operation 24/7. Enbridge Safety will initiate the notification process by using the Call-EM-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews.

- *Severe Weather Alerts:* report to shelter when the county activates their warning sirens.
- *Fire/Building Evacuation Alert*: Report to assigned evacuation point. Follow Air Horn Procedure: Series of Three 1 second blasts.

Weather related cancellation or concerns call 269-781-1914

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Instructions
Operational Period: 6/14/12 (0700hrs) to 6/21/12 (0700hrs)

River Opening: Be advised that the Kalamazoo River between MP – 2.75 and MP 2.25 has been opened to the public. Public recreational activities are to be expected on the river in this segment. Be courteous and respectful to members of the public at all times. Be aware that members of the public may be present in closed segments of the river or work areas.

Weather: Review weather information prior to commencing work each day. Be aware of changes in the weather conditions and ensure proper controls are implemented to address the weather hazards such as: Cold, Wind, Rain, Ice, Fog, Frost, etc. Take actions in accordance with instructions provided by supervisory personnel and as received through the Call-Em-All and PTT systems.

Sunscreen: Sunscreen should be applied to exposed skin, and not just if you are going to be in the sun. UVB rays cannot penetrate glass windows, but UVA rays can, leaving you prone to these damaging effects if unprotected.

PPE: Be prepared for changing weather conditions by wearing, and/or having available, appropriate cold weather gear and approved safety footwear with appropriate soles for use on slippery ground conditions due to frost, ice and rain. When PFDs are required you must ensure that they are United States Coast Guard approved and are the outermost layer, with reflective vest worn under the PFD.

Vehicles: Follow speed limits and adjust speed as necessary for road conditions. Clear all windows of frost before driving. Make sure your vehicle is in proper working condition.

SPECIAL NOTATION ON WEATHER and HAZARD ALERT MESSAGING:
(See daily updates for additional weather information).

Enbridge Safety will maintain consistent weather messages by compiling information and present through daily briefings. Weather forecast updates will be distributed to field safety staff for further communication in the field. Enbridge Safety is responsible for communicating weather alerts based on information received through the Weather TAP system and text messages received from the National Weather Service in Grand Rapids.

In the event of severe weather warnings and alerts, Enbridge Safety will be monitoring via the Weather TAP system. Enbridge Safety will initiate the notification process by using the Call-Em-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews. DK Security will be notified by Enbridge Safety by phone from 1800 – 0700 hours.

Severe Weather Alerts: Take appropriate shelter when the county activates their tornado warning sirens. In the Incident Command Post, report to the designated tornado shelter rooms. Where appropriate shelter is not available, lie flat in a nearby ditch or depression and cover your head with your hands. Be aware of potential for flooding and flying debris.

Note: Emergency notification siren systems will be tested on the first (1st) Saturday of each month in Calhoun and Kalamazoo Counties. Typically a siren is sounded at 1200 hours; however, this could be delayed due to current circumstances in the county.

Fire/Building Evacuation Alert: In the event of a fire, utilize air horn to initiate series of three 1 second blasts. Must report to the designated evacuation point upon hearing a series of three 1 second air horn blasts. **Please close all doors, and turn lights out upon leaving your area.**

Call the Safety Office at 269-781-1914 if you have weather related concerns. Call 269-781-1913 for other Safety related issues.

Safety Orientations: Held Monday - Friday at 0800 at the Operations Center (1601 Pratt Avenue)

Boat Safety Awareness Orientation: Available by appointment Monday – Friday, contact the Safety Office.

If you see wildlife (dead or alive) that is impacted by the oil, call Bob Doherty [redacted]

Field Safety Staff	
Name	**Phone**
Red Calvert	[redacted]
Steve Runstrom	
Matt Piescher	

Communication Check: Communication Check will be tested twice a week via the Verizon Push To Talk (PTT) system by Enbridge Safety office on Monday's and Thursday's at 1200 hours.

Call-Em-All: Will be tested by Enbridge Safety office on Wednesday's at 1200 hours.

First Aid Kits: There are four (4) kits located within the Incident Command Post Facility. Please review the Evacuation Plan map for locations.

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Message
Operational Period: 6/14/12 (0700hrs) to 6/21/12 (0700hrs)

DAY 1:
Thursday, June14, 2012

Life Saving Rule #5 – Isolate Energized Systems

Always follow procedures for lockout/ tag-out. Equipment, facilities and piping systems could have stored or residual energy that poses a danger.

Each and every one of us must do everything in our power to protect ourselves, and to protect those around us.

You are the power behind lifesaving rules

DAY 2:
Friday, June 15, 2012

River Use by the Public

Boat operators and passengers should be aware that the public is using the river now and number public users are increasing, especially on the weekends.

- Be aware that recreational users of the river may be anywhere on the river.
- Kayaker and canoeists may not follow navigation rules and may not be in full control.
- The public always has the right of way on the river.
- Swimmers have been observed in the river and may be difficult to see. When you see swimmers - get off step.
- When in doubt, stop and evaluate the situation.
- Know what to do in case of an emergency.
- Be courteous when interacting with the public.

DAY 3/ DAY 4:
Saturday, June 16 – Sunday, June 17, 2012

Slips, Trips and Fall Conditions

Most hazards can be avoided by using common sense. Please consider the following hazardous situations.

Boats
- Loss of balance due to instability
- Slippery surfaces (frost, rain, ice, snow, etc.)
- Tools/Equipment/Debris
- Overextending
- Access/Egress

Work Areas
- Tools/Equipment/Debris
- Fallen Trees/Branches
- Large Stones/Uneven Terrain/Steep Slopes/Holes
- Environmental Conditions (muddy, slick, etc.)
- Vehicle/Equipment – Access/Egress

Controls
- Identify and Control Hazards
- Focus on the Task – Avoid Distractions
- Maintain 3 Point Contact – Access/Egress
- Utilize Non-Slip Tapes
- Wear Proper Footwear for Conditions

DAY 5:
Monday, June 18, 2012

Safe Work Permits

Safe Work Permits shall be completed and authorized before starting any Contractor work activities. The Permit serves as an important communication device between the authorized Permit issuer, authorized Permit approver, and the Contractor performing the work. This communication ensures that all required safety measures are implemented before and during the work.

Safe Work Permits:

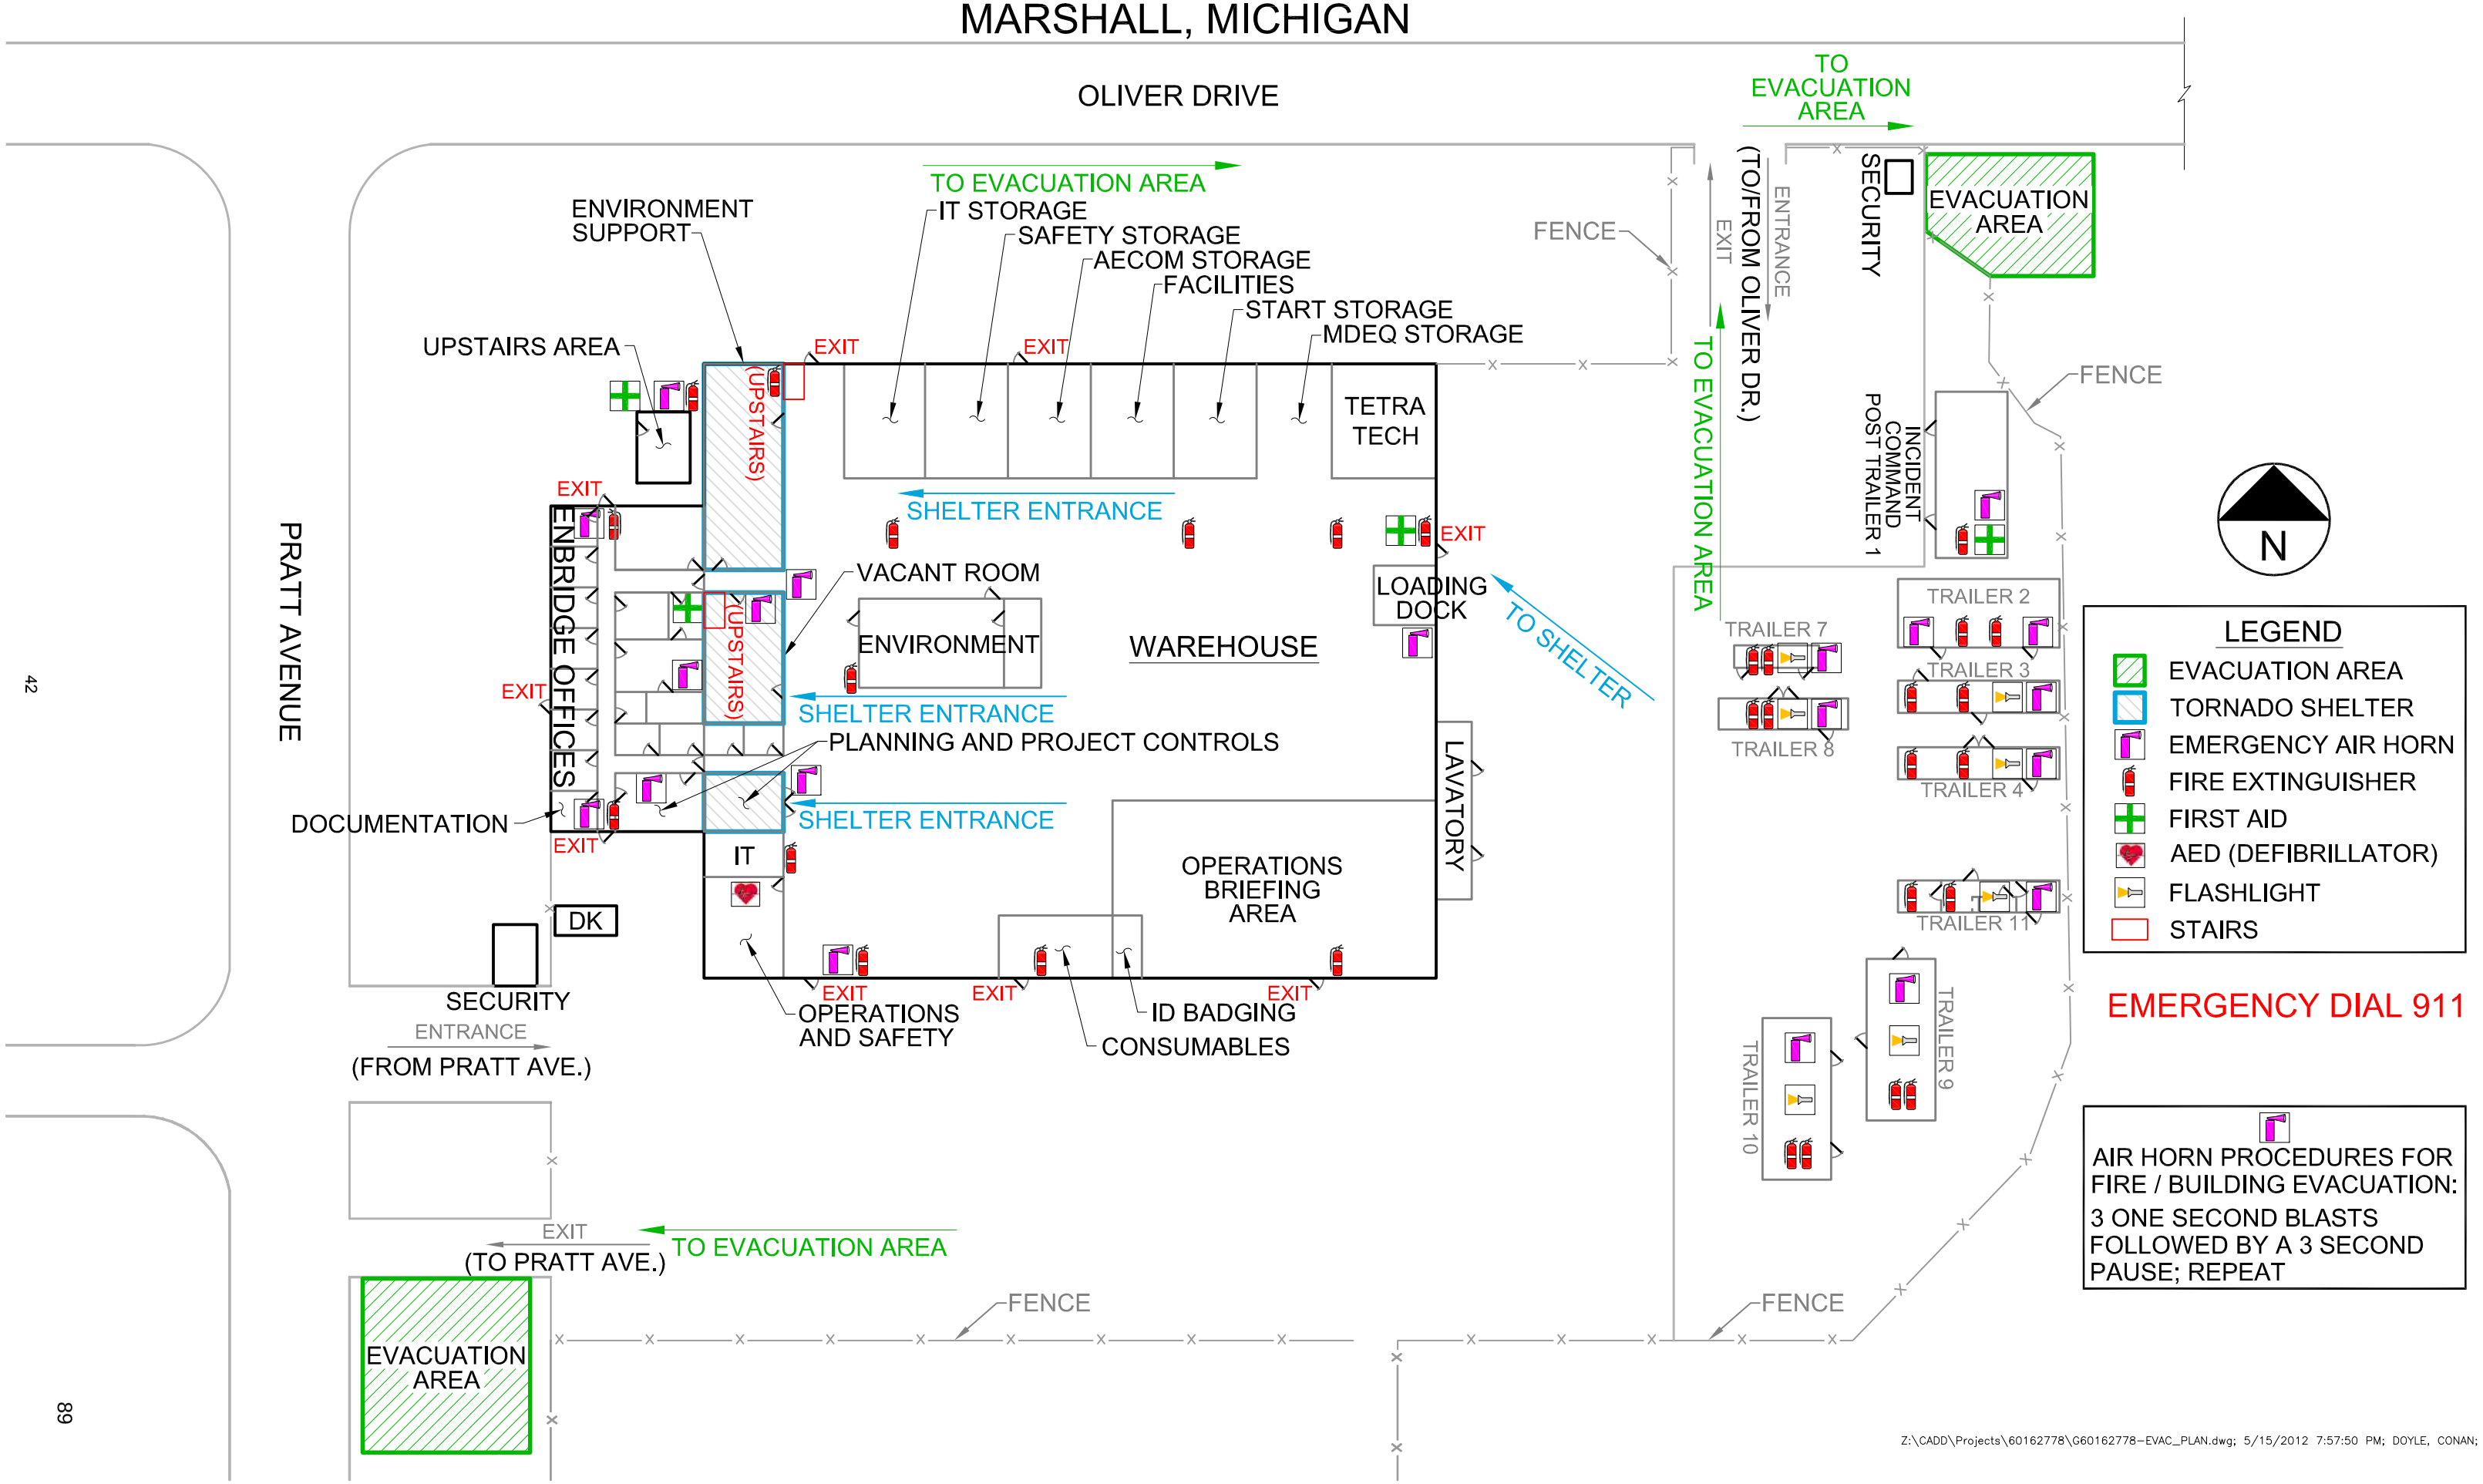
- Aids pre-job planning by designating personnel to complete required safety checks or hazard assessment before the work begins.
- Helps protects workers, Contractors, and the public by ensuring required safety measures are implemented.
- Requires Contractors to provide adequate notice and significant descriptions of the scope of the work when requesting the Permit.

DAY 6:
Tuesday, June 19, 2012

Boat Trailer Inspections

A ten point inspection for boat trailers:

1.) Lighting – Check running, turn, reverse and stop indicator lights.
2.) Lug nuts. Are they tight?
3.) Boat trailer tire inspection – how's the tread? Check the air pressure with a gauge.
4.) Wheel bearings – when was the last time they were greased?
5.) Check bolts for tightness and welds for cracks. The bolts on the leaf springs are notorious for coming loose.
6.) Make sure your safety chain is in proper order and always hook it up. Make sure all pins are in place
7.) Check the bunks on which the boat sits. Are the carpet and wooden boards in good condition? This is best looked at while the boat's off the trailer.
8.) Check for corrosion.
9.) Check straps for wear.
10.) Check that ball and trailer hitch ball coupler are the same size and the load doesn't exceed the hitch rating.



DAY 7:
Wednesday, June 20, 2012

Housekeeping and Litter

Remember that we are guests in the Marshall and Battle Creek communities. Keeping our worksites clean is a visible demonstration of how we respect the environment and residents.

- Always put your own litter in the appropriate receptacle.
- Retrieve any litter noticed in the river or on the ground near our worksites.
- Inspect open pickup beds, trailers, and boats before traveling for loose materials.

7. Work Assignments

1. Field decon operations for: personnel, hand equipment, and boats for preparation of transport shall be installed prior to work beginning at boat launches / staging areas for individual work sites.
2. Haul contaminated soil, water, media and debris to staging areas for waste characterization and oil recovery sampling prior to offsite disposal.
3. Waste shall be collected at a minimum of daily for direct haul to the landfill or transported to Frac Tank City (FTC) for consolidation with similar waste streams as necessary. Waste generated from coring will be consolidated daily and transported to Frac Tank City.
4. Waste management characterization, manifesting, and coordination of transportation and disposal.

For START/US EPA:

1. Provide oversight of all waste management activities.
2. Ensure appropriate sampling, tracking and disposal is performed on oil impacted debris, water and soil.
3. Review manifests, weight tickets and bills of lading for correlation to waste stream analytical data.
4. Review weekly oil recovery and waste disposal report.

8. Special Instructions

Ensure all Best Management Practices (BMPs) are in place and utilized.

In accordance with the Fatigue Management Plan, all work permit activities will be completed no later than 1900.

SAFETY INSTRUCTIONS:

For vacuum truck operation guidelines, please refer the HASP.

At Frac Tank City:

1. The following procedure shall be used for initial opening of hatch or rear doors of liquid vacuum trucks and hatches of vacuum excavation units:
   a. Approach the hatch to be opened with a calibrated five gas monitor and a benzene monitor.
   b. Personnel performing this task must wear a full face respirator with organic vapor cartridge.
   c. Slightly open the hatch and take VOC, H2S, LEL, Oxygen, CO and benzene readings.
   d. If readings are greater than 10 ppm H2S, 10% LEL, 25 ppm CO or 25 ppm benzene then personnel shall close the hatch and utilize SCBA prior to opening the hatch.
2. Operations - Respiratory protection may be required depending on periodic monitoring results. Wear a half-mask respirator equipped with an organic vapor cartridge when 0.5 ppm benzene is detected. Wear a full-face respirator equipped with an organic vapor/acid gas cartridge when benzene is at 5 ppm to 25 ppm.

Submerged Oil Assessment Special Purpose Meeting: Daily at 1100, Trailer #2

Submerged Oil Assessment

1. Continue refinement of 2012 Submerged Oil Recovery Plan.
2. Conduct Morrow Lake monitoring activities. (1 Team)
3. Conduct coring activities throughout the Kalamazoo River, Morrow Lake Delta, and Morrow Lake. (3 Core Collection Teams, 1 Logging Team)
4. Review sheen tracking information from the field.
5. Continue sampling and monitoring of cylindrical sampling devices, as required per the sampling plan.
6. Collect velocity data within the Kalamazoo River System. (1 Team)

For START/US EPA and DEQ:

1. Oversee and document Submerged Oil Assessment work activities.

Submerged Oil Science

1. Continue implementation of the hydrodynamic model to determine movement of submerged oil.
2. Continue development of Submerged Oil Quantification.

For START/US EPA:

1. Oversee and document Submerged Oil Science work activities.

Submerged Oil Compliance

1. Track previously submitted MDEQ permit applications for sediment removal.

Submerged Oil Recovery

1. Implement sheen management activities as necessary.

Submerged Oil Monitoring

1. All odor complaints will be reported to US EPA and MDCH within 30 minutes of receipt by the odor response team (Monday through Saturday 0700 – 1900). Complainants will then be contacted to schedule an odor response site visit or receive additional complaint information if no on-site response requested. Response evaluation will be reported to agencies and complainants upon completion. Samples will be analyzed at a 24-hour turnaround time.

All Groups: Designated Meeting Location: ICP.

8. Special Instructions

NRDA Trustees will be conducting recreational use surveys along the Kalamazoo River at river access points through Autumn 2012.

No vessels will travel over the E4 control point at MP 37.75 without prior authorization from the Containment Branch Director. Detailed work instructions will be provided to all team members through daily work orders.

In accordance with the Fatigue Management Plan, all work permit activities will be completed no later than 1900.

Rowe Island, MP 38.50 to MP 38.75, is a No Go Zone – Environmental Sensitive Area.

SAFETY INSTRUCTIONS:

When operating or working in the vicinity of Ultra violet testing equipment, wear approved safety glasses that provide protection from UV A rays and never look directly into the illuminator.

All in water activities of workers in water depths over fifty percent (50%) of thigh height will require tethering. Please refer to the HASP for further instructions.

7. Work Assignments

Containment Science

1. Refine the hydrodynamic model and concepts of the Plan for Preventing Migration of Oil Past the Morrow Lake Dam.
2. Develop subsurface containment strategies throughout the Kalamazoo River system to prevent recontamination of the Morrow Lake fan.

For START/US EPA:

1. Interface with Enbridge and assist with the development of surface and subsurface containment strategies throughout the Kalamazoo River system to prevent the continued migration of oil, oil sheen, submerged oil, and oil-containing sediments into Morrow Lake.

Containment Compliance

1. Monitor submitted MDEQ permit application for toolbox activities in the Kalamazoo River.
2. Monitor submitted MDEQ application for permit for the Kalamazoo River Sediment Control Structures (13 sites).
3. Monitor submitted MDEQ permit application for the E4.0 containment boom reconfiguration plan.

Containment Recovery

1. Utilize resources to contain and collect sheen and surface oil as necessary.
2. Perform containment strategies along the Kalamazoo River including the following tasks:
   a) Deploy and maintain shoreline containment boom as required.
   b) Complete sheen management as required.
3. Continue to implement and maintain the E4.0 containment boom reconfiguration plan.
4. Install and maintain Kalamazoo River Sediment Control Structures, including the cylindrical sampling devices.

Containment Monitoring

1. Record and document sheen observations in main channel and overbank areas, and conduct sheen testing, if necessary. Report sheen observations back to operations section chiefs for monitoring and response.
2. All odor complaints will be reported to US EPA and MDCH within 30 minutes of receipt by the odor response team (Monday through Saturday 0700 – 1900). Communication Check: Communication Check will be tested Mondays and Thursdays by Enbridge Safety Office at 1200 hours.

SPECIAL NOTATION ON WEATHER MESSAGING:
See daily updates for additional weather information.

Enbridge Safety is responsible for weather on-site and they are supported by the NOAA / NWS Grand Rapids Weather Office.

Enbridge Safety will maintain consistent weather messages by following the established format of presenting daily and extended forecast, river depth, hydrologic predictions, and the five day quantitative precipitation forecast. The compilation of information will be presented through daily briefings. Enbridge Safety will continue the current practice of issuing a daily forecast to the field safety staff by posting NWS updates in various locations around the Incident Command Post.

In the event of severe weather warnings and alerts, the NWS Grand Rapids Center will contact the Enbridge Safety Office using the Enbridge Safety Radio System between the hours of 0700-1800 hours. If severe weather warning and alerts are occurring from 1800-0700, NWS Grand Rapids Center will contact the Enbridge Safety Office by phone at: **269-781-1913** and DK Security by phone at: **269-781-1911**. These numbers are in operation 24/7. Enbridge Safety will initiate the notification process by using the Call-EM-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews.

- *Severe Weather Alerts:* report to shelter when the county activates their warning sirens.
- *Fire/Building Evacuation Alert*: Report to assigned evacuation point. Follow Air Horn Procedure: Series of Three 1 second blasts.

Weather related cancellation or concerns call 269-781-1914

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Instructions
Operational Period: 6/21/12 (0700hrs) to 6/28/12 (0700hrs)

River Opening: Be advised that the Kalamazoo River between MP – 2.75 and MP 2.25 has been opened to the public. Public recreational activities are to be expected on the river in this segment. Be courteous and respectful to members of the public at all times. Be aware that members of the public may be present in closed segments of the river or work areas.

Weather: Review weather information prior to commencing work each day. Be aware of changes in the weather conditions and ensure proper controls are implemented to address the weather hazards such as: Cold, Wind, Rain, Ice, Fog, Frost, etc. Take actions in accordance with instructions provided by supervisory personnel and as received through the Call-Em-All and PTT systems.

Sunscreen: Sunscreen should be applied to exposed skin, and not just if you are going to be in the sun. UVB rays cannot penetrate glass windows, but UVA rays can, leaving you prone to these damaging effects if unprotected.

PPE: Be prepared for changing weather conditions by wearing, and/or having available, appropriate cold weather gear and approved safety footwear with appropriate soles for use on slippery ground conditions due to frost, ice and rain. When PFDs are required you must ensure that they are United States Coast Guard approved and are the outermost layer, with reflective vest worn under the PFD.

Vehicles: Follow speed limits and adjust speed as necessary for road conditions. Make sure your vehicle is in proper working condition.

Process for Reporting Potentially Hazardous Materials: If you observe a potentially hazardous material which is not spill related, notify field safety officer and evacuate the area. Do not let anyone into the area unless it is Enbridge Safety and/or Operations Inspector. Immediately report all details to the Enbridge Safety Office at 269-781-1913. The Enbridge Safety Office will alert the Emergency Response Center or call (911). Notifications will go to Calhoun County EMS or Kalamazoo County EMS, EPA, DEQ and Pollution Emergencies.

SPECIAL NOTATION ON WEATHER and HAZARD ALERT MESSAGING:

(See daily updates for additional weather information).

Enbridge Safety will maintain consistent weather messages by compiling information and present through daily briefings. Weather forecast updates will be distributed to field safety staff for further communication in the field. Enbridge Safety is responsible for communicating weather alerts based on information received through the Weather TAP system and text messages received from the National Weather Service in Grand Rapids.

In the event of severe weather warnings and alerts, Enbridge Safety will be monitoring via the Weather TAP system. Enbridge Safety will initiate the notification process by using the Call-Em-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews. DK Security will be notified by Enbridge Safety by phone from 1800 – 0700 hours.

Severe Weather Alerts: Take appropriate shelter when the county activates their tornado warning sirens. In the Incident Command Post, report to the designated tornado shelter rooms. Where appropriate shelter is not available, lie flat in a nearby ditch or depression and cover your head with your hands. Be aware of potential for flooding and flying debris.

Note: Emergency notification siren systems will be tested on the first (1st) Saturday of each month in Calhoun and Kalamazoo Counties. Typically a siren is sounded at 1200 hours; however, this could be delayed due to current circumstances in the county.

Fire/Building Evacuation Alert: In the event of a fire, utilize air horn to initiate series of three 1 second blasts. Must report to the designated evacuation point upon hearing a series of three 1 second air horn blasts. **Please close all doors, and turn lights out upon leaving your area.**

Call the Safety Office at 269-781-1914 if you have weather related concerns. Call 269-781-1913 for other Safety related issues.

Safety Orientations: Held Monday - Friday at 0800 at the Operations Center (1601 Pratt Avenue)

Boat Safety Awareness Orientation: Available by appointment Monday – Friday, contact the Safety Office.

If you see wildlife (dead or alive) that is impacted by the oil, call Bob Doherty [redacted]

Communication Check: Communication Check will be tested twice a week via the Verizon Push To Talk (PTT) system by Enbridge Safety office on Monday's and Thursday's at 1200 hours.

Call-Em-All: Will be tested by Enbridge Safety office on Wednesday's at 1200 hours.

First Aid Kits: There are four (4) kits located within the Incident Command Post Facility. Please review the Evacuation Plan map for locations.

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Message
Operational Period: 6/21/12 (0700hrs) to 6/28/12 (0700hrs)

DAY 1:
Thursday, June 21, 2012

Lifesaving Rule #2 – Driving Safety

Only drive a vehicle or operate equipment when not under the effect of alcohol or any substances that cause impairment.

Driving a vehicle or operating equipment is a high-risk activity. Focus on the task.

Remember: When it comes to safety – you are at the wheel. People are relying on your professional integrity to be safe in everything you do.

DAY 2:
Friday, June 22, 2012

Emergency Eyewash Stations/Bottles

Emergency eyewash equipment can be key to saving your eyesight.

Before an emergency occurs:

- Know the equipment location.
- Know how to use the equipment: Always review the manufacturer's instructions for the equipment before an emergency occurs.
- Equipment maintenance: Perform regular checks to ensure the equipment will function as intended in the event of an emergency, and the saline solution has not expired.

In the event of an emergency:

- Remove caps.
- Pour contents of the bottle into the affected eye.
- Repeat if necessary.
- If required, seek further medical attention.

Don't forget to notify Enbridge Safety and submit a report documenting the incident.

DAY 3/ DAY 4:
Saturday, June 23– Sunday, June 24, 2012

Other Poisonous Plants

In addition to poison ivy, poison oak, and poison sumac, there are two plants that you should also be aware of that can cause serious skin problems – Giant Hogweed and Wild Parsnip. These invasive plants contain photosensitizing chemicals which in contact with human skin and in conjunction with sunlight cause phytophotodermatitis - a serious skin inflammation.

Giant Hogweed
Giant hogweed can grow to 14 feet or more. Its hollow, ridged stems grow 2-4 inches in diameter and have dark reddish-purple blotches. Its large compound leaves can grow up to 5 feet wide. Its white flower heads can grow up to 2 1/2 feet in diameter.

Wild Parsnip
Wild parsnip has large leaves that resemble celery leaves. The stem is hollow and grooved, two to five feet tall. The flowers are small, yellow, five-petaled, and look like a yellow Queen's Anne's Lace.

DAY 5:
Monday, June 25, 2012

Field Level Hazard Assessments

Prior to the start of work or when significant change of scope occurs, a Field Level Hazard Assessment (FLHA) is to be completed involving the Contractor Site Representative and the workers involved in the work.

The FLHA is to be reviewed and signed off with all workers as part of the tailgate/toolbox safety meeting prior to starting any work. The FLHA is to be completed in the workplace where the task will be performed. This documentation is to be handwritten, photocopying is not permitted.

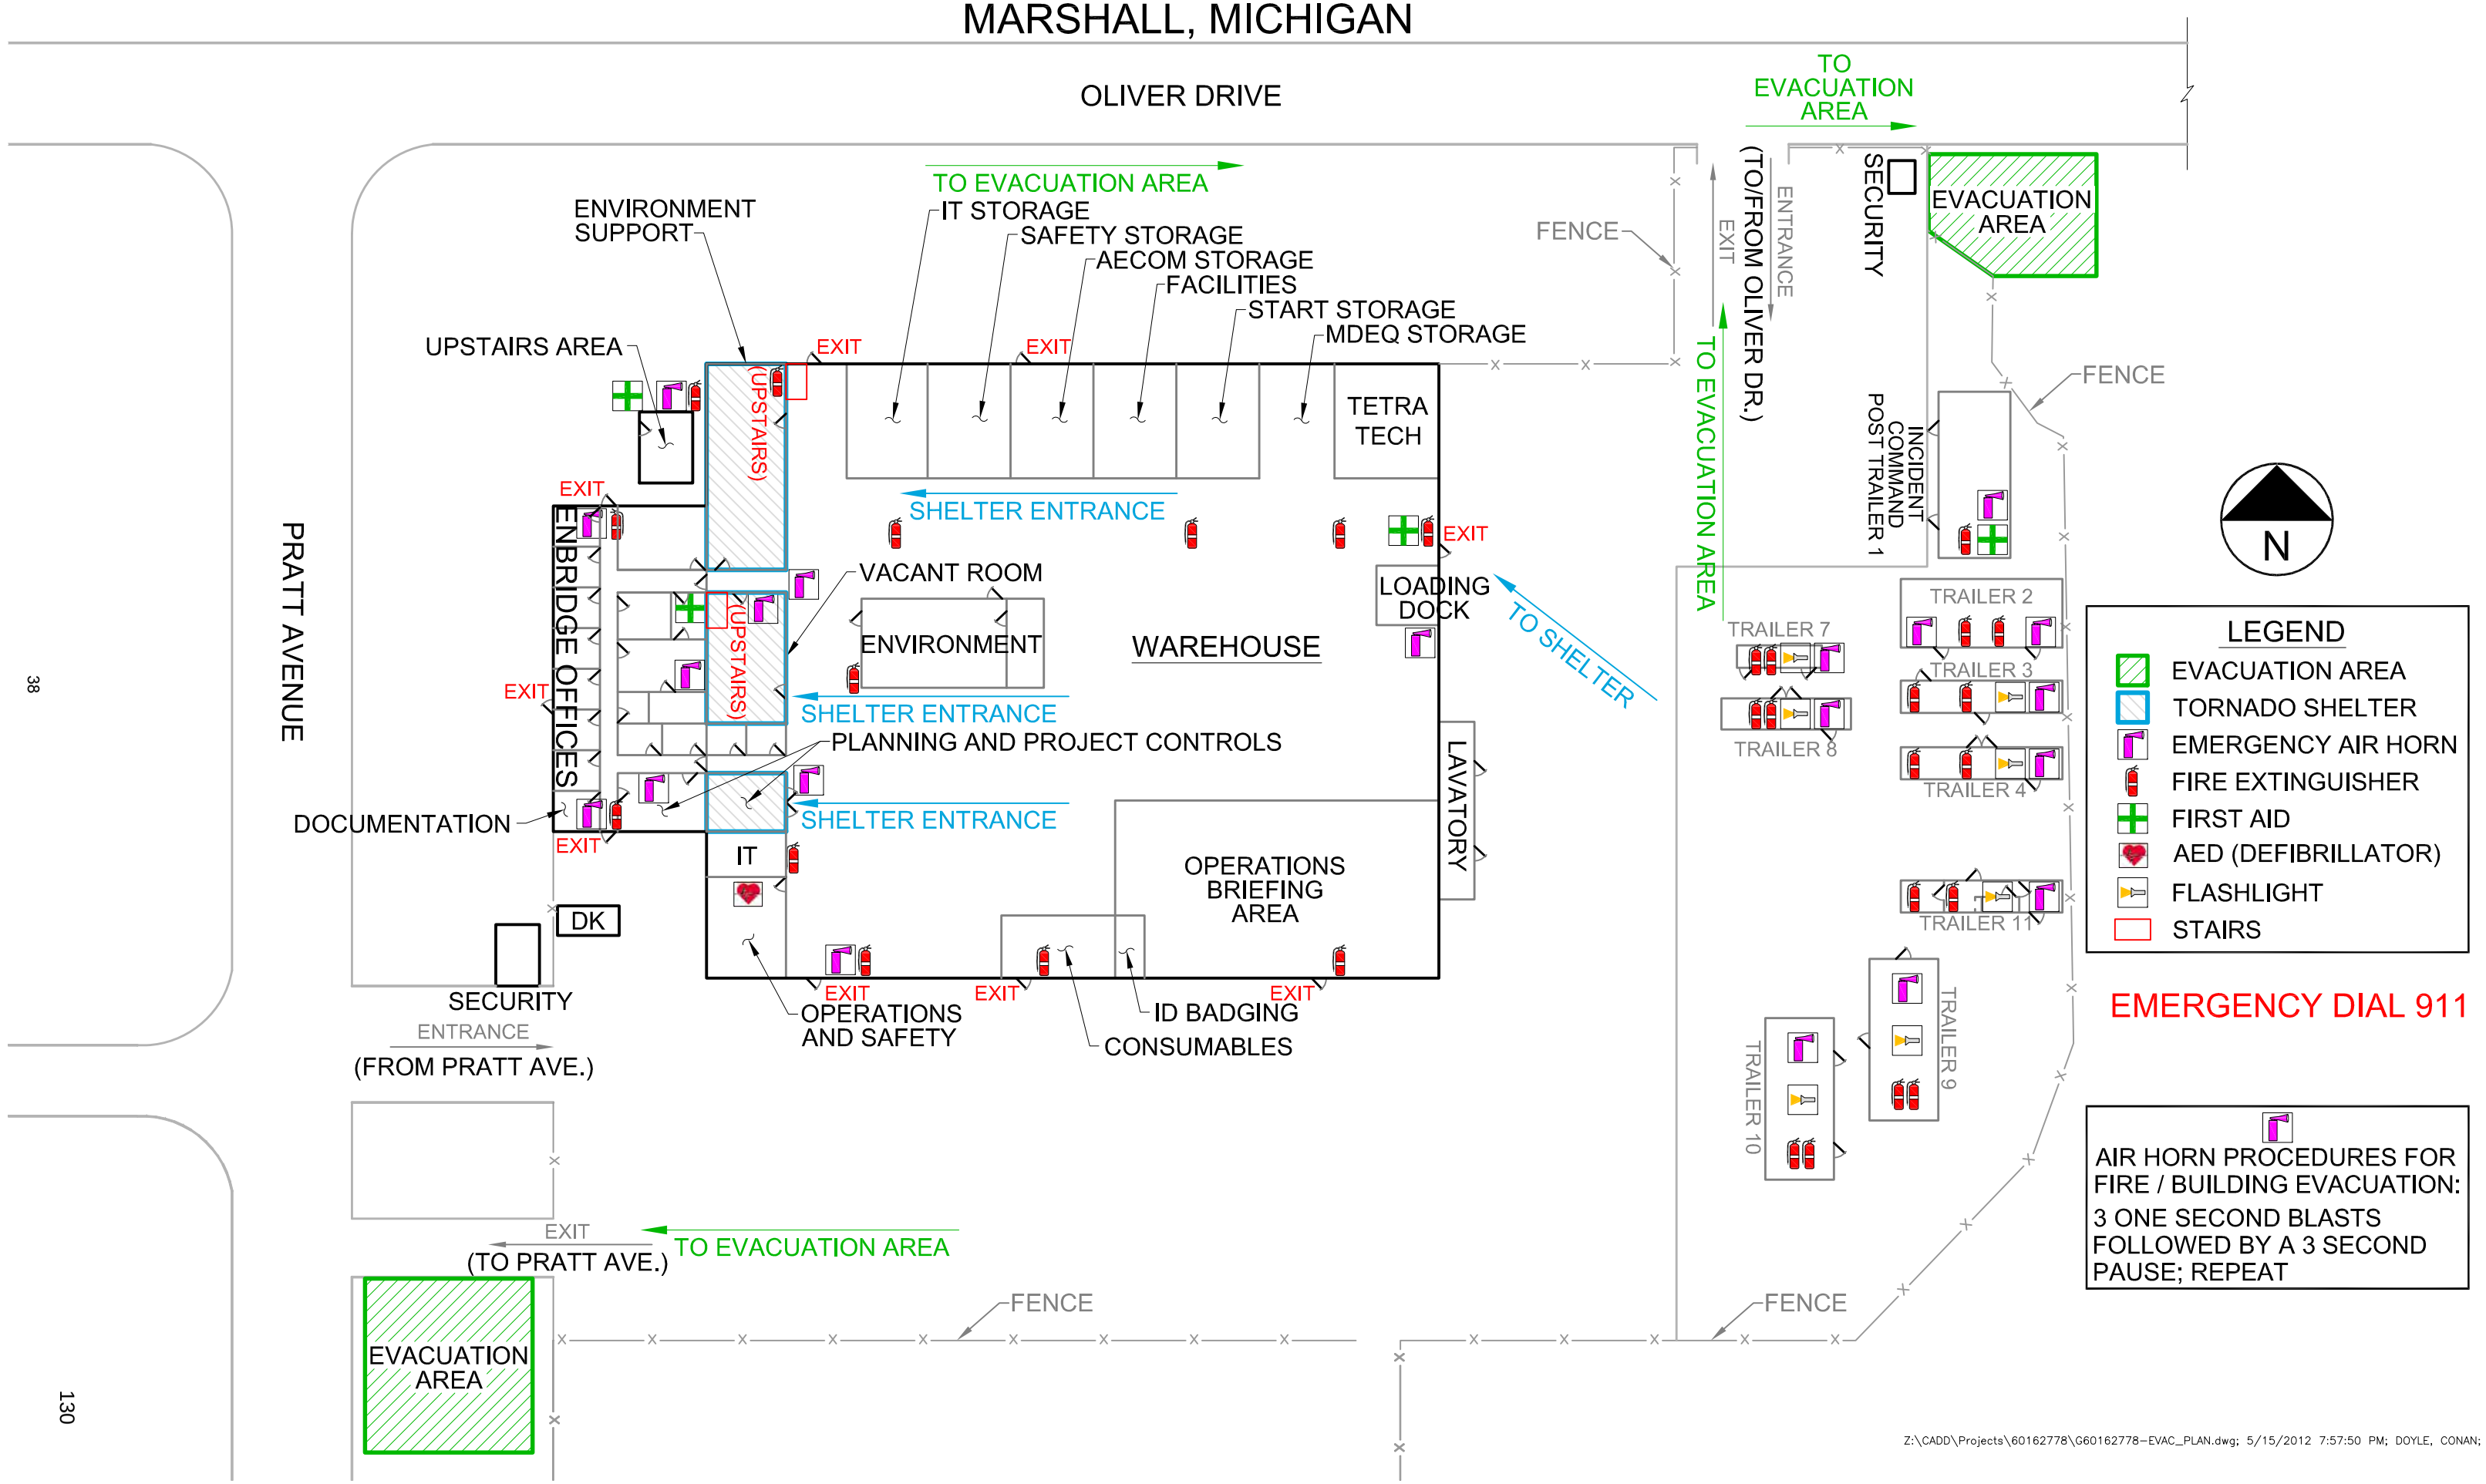
DAY 6:
Tuesday, June 26, 2012

Securing Loads

Securing Loads for Transport
- Inspect all anchor points and tie-down locations for visible signs of damage.
- Always inspect every chain before use. Look for cracked, bent, twisted or stretched links.
- Keep chains/straps straight and tight. Ratchet binders are recommended for chains.
- Be sure to flag and permit the load if it exceeds the width and length restrictions for transporting according to federal/state/local regulations.
- Ensure that all items on the trailer and the load are secured.
- Check load and trailer for fluid leakages, rocks and other loose debris.

Transporting a Load
- Ensure the load is properly secured and balanced.
- Many governmental agencies throughout the world require the truck driver, within the first 25 miles (40.2 km) after beginning a trip, stop and recheck all load securing devices and make adjustments as necessary.
- ALWAYS use common sense and good judgment when loading, hauling, and transporting equipment and materials.

DAY 7:
Wednesday, June 27, 2012



Safety Culture

Safety is not a priority or an initiative; it must be a core value.

There must be a shared belief that all incidents are preventable and a shared goal to achieve zero incidents. There must be a commitment to doing things right the first time, every time and a will to continually improve safe work practices.

A strong safety culture involves and engages all personnel. It requires individuals to take personal responsibility for safety and to freely intervene to ensure the safety of their co-workers.

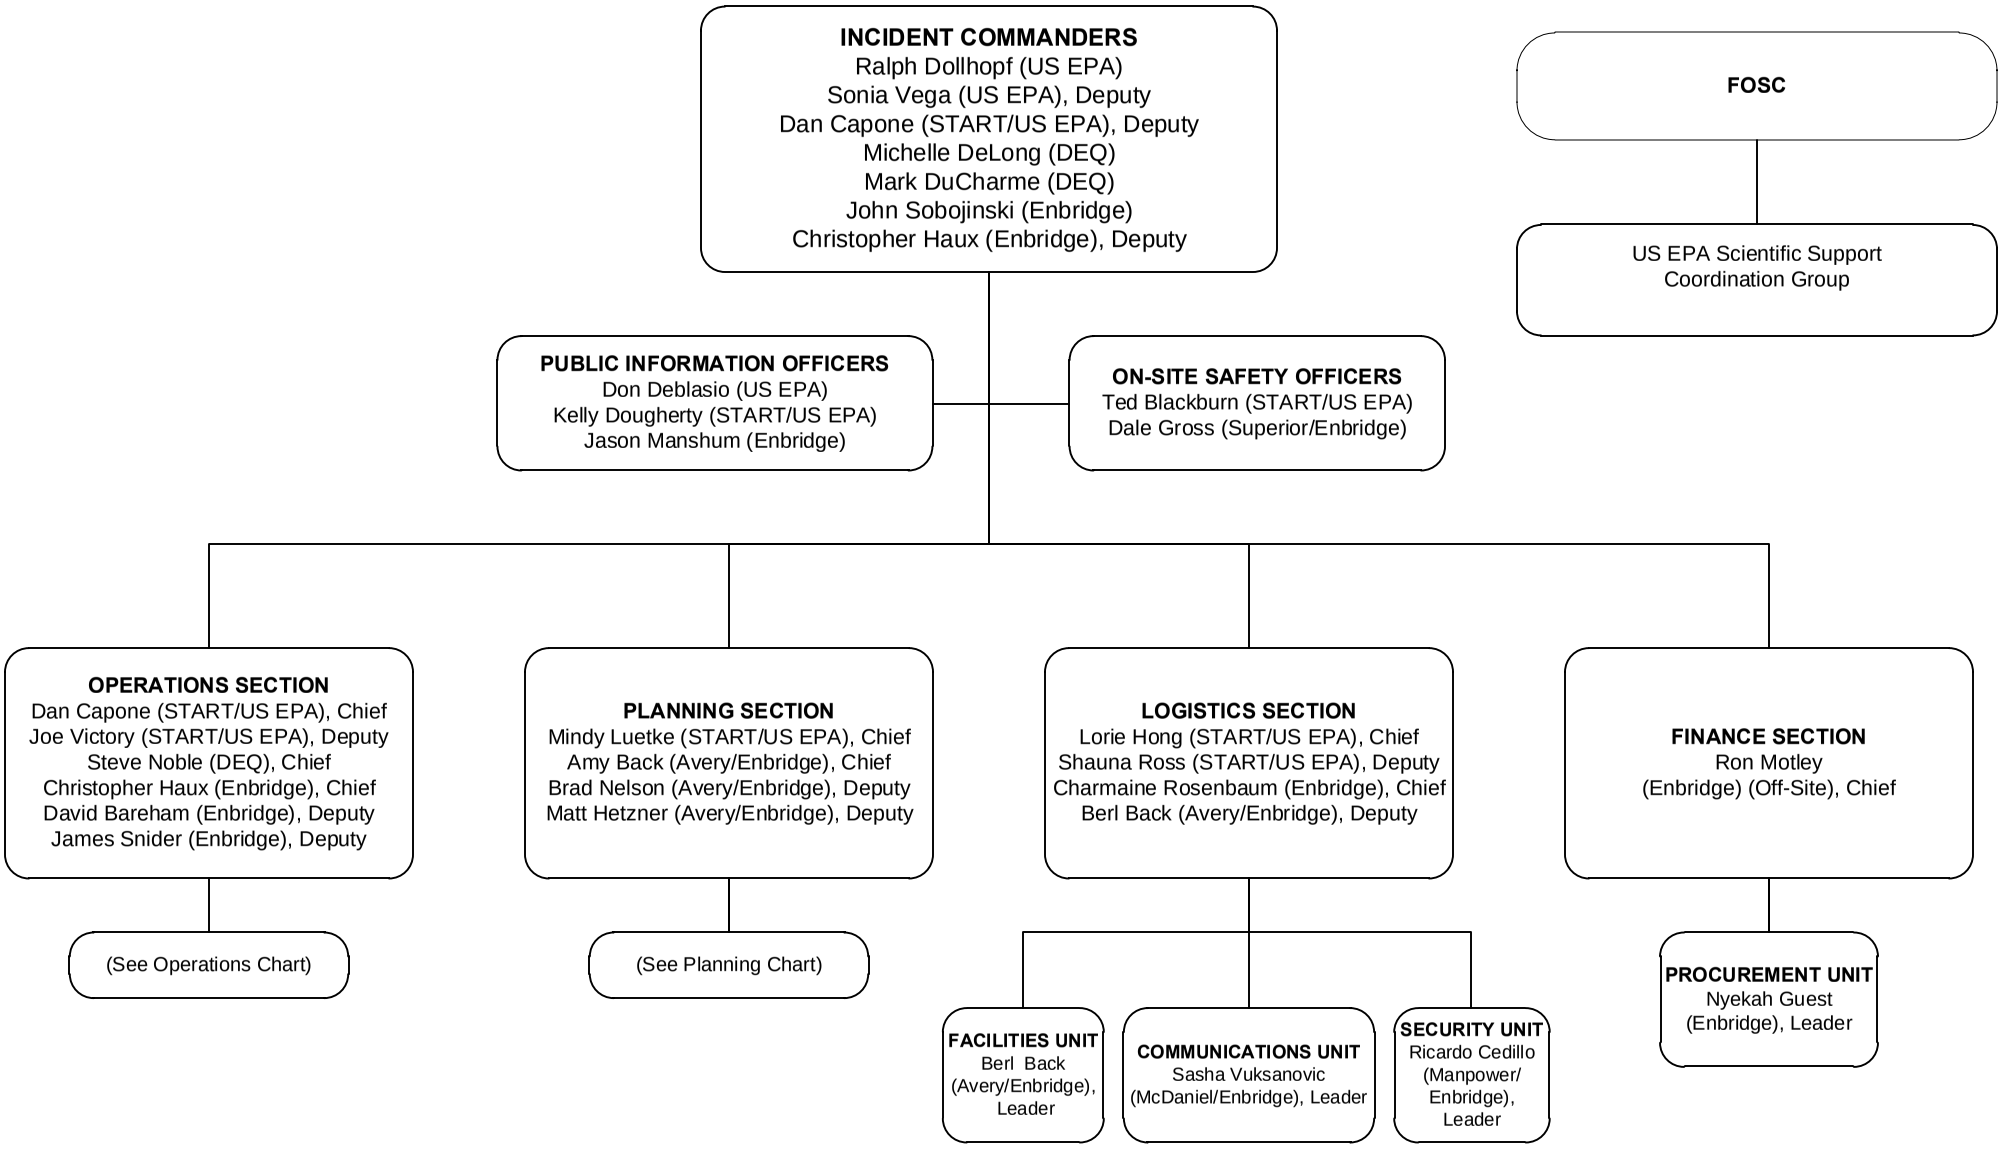
Kalamazoo River/Enbridge Spill	From: June 07, 2012 @ 0700 To: June 14, 2012 @ 0700	

3. Incident Objective(s)

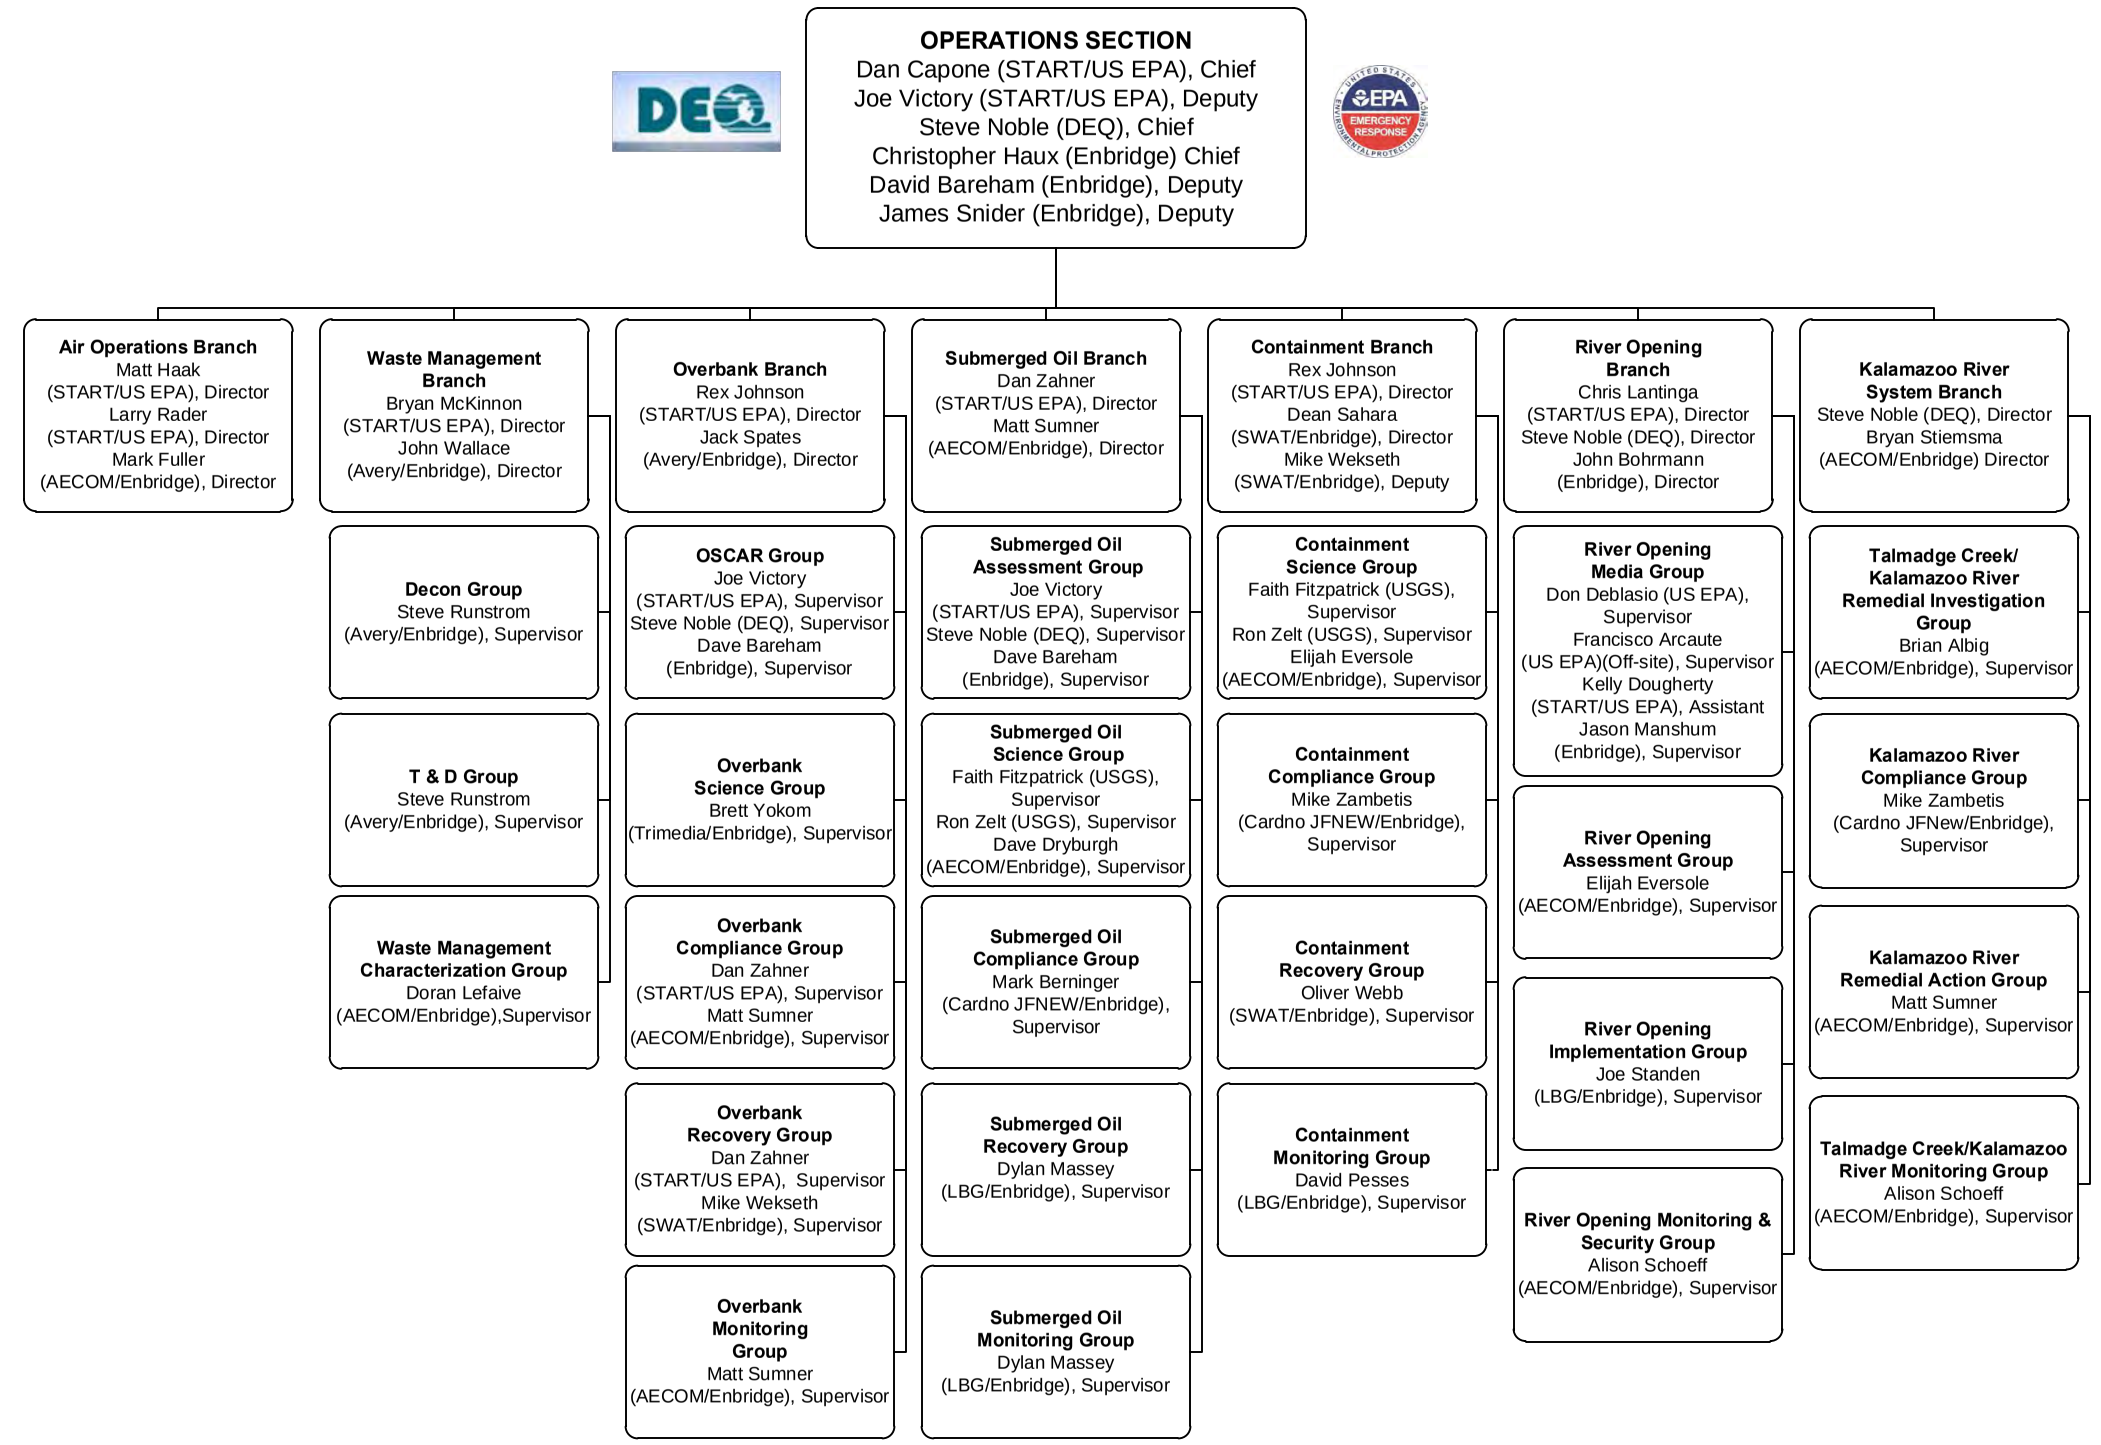
1. Ensure health and safety of the public and response and recovery personnel.
2. Ensure absolute containment of submerged oil and oil-containing sediments within the Delta and the Fan of Morrow Lake.
3. Ensure effective transition of regulatory oversight from EPA to Michigan DEQ jurisdiction as appropriate.
4. Continue developing strategy for opening of Kalamazoo River.
5. Perform recovery and containment of oil from affected public and private areas of river and river system.
6. Perform remediation and restoration of affected public and private areas of river and river system.
7. Maintain effective communications with cooperating and assisting agencies, the public, including regular coordination with the Multi-Agency Coordination Group (MAC).
8. Provide protection of environmentally and culturally sensitive areas including wildlife and historic properties.
9. Collect, coordinate, manage and communicate environmental and public health data including maintenance of Joint Information Center function.

4. Operational Period Command Emphasis



1. Respond to and document emerging oil throughout the Kalamazoo River system.
2. Continue efforts to secure proper permitting for the second phase of the Kalamazoo River Submerged Sediment Trap Structures.
3. Refine and implement River Opening Strategy.
4. Evaluate and continue planning for implementation of containment options to prevent the migration of oil into the fan and Morrow Lake.

5. Safety Objectives for the Operational Period



1. Focus on management of change and the use of the safe work permit.
2. Assure effective integration of public safety and worker safety on the river. Focus on recognition and avoidance of public and worker dual-use hazards.

7. Work Assignments

Enbridge and START/US EPA:

1. Photo-document areas of sheen from source area to Morrow Lake dam and report observations back to operations section chiefs for monitoring and response. Flights occur once a week and as needed.

8. Special Instructions

Air Ops Team shall report to Marshall Regional Airport Heli-Pad. Additional flights can be scheduled on a case by case basis by contacting Mark Fuller (AECOM/Enbridge) at 847-533-9428. Additional operations recon flights shall be scheduled as required. These flights will have priority over the other flights in order to establish work priorities.

Areas that are deemed sensitive due to property owner concerns shall be avoided. If it is necessary to fly over at the sensitive area, pilot shall be instructed to maintain a minimum altitude of 500 ft. Sensitive flight areas include: Squaw Creek Subdivision (MP 3.25), Village of Ceresco and MP 10.5-11.5 LDB.

SAFETY INSTRUCTIONS:
DO NOT access heli-pad without being escorted by the pilot. Never approach or exit the aircraft to/from the rear, near the tail rotor.

Severe Weather Alerts:
Follow instructions and procedures provided by the FAA and the Civil Defense System.

7. Work Assignments

Decon

1. Vessels, Frac tanks, boom, vac trucks, roll off boxes, yellow iron and miscellaneous equipment. Decon is ongoing at Frac Tank City (FTC), during daylight hours only.
2. All final Decon will be completed at Frac Tank City.
3. Field decon operations for: personnel, hand equipment, and boats for preparation of transport shall be installed prior to work beginning at boat launches / staging areas for individual work sites.
4. All Decon activities will be done under the instruction and by the Decon Division only.

For START/US EPA:

1. Provide oversight of decon activities.

T & D

1. Haul contaminated soil, water, media and debris to staging areas for waste characterization and oil recovery sampling prior to offsite disposal.
2. Waste generated from boat launches / staging areas decontamination sites shall be collected at a minimum of daily for direct haul to the landfill or transported to Frac Tank City for consolidation with similar waste streams as necessary.
3. Waste generated from coring will be consolidated daily and transported to Frac Tank City.

For START/US EPA:

1. Provide oversight of T&D activities.
2. Ensure appropriate sampling, tracking and disposal is performed on oil impacted debris, water and soil.
3. Review manifests, weight tickets and bills of lading for correlation to waste stream analytical data.
4. Review weekly oil recovery and waste disposal report.

Waste Management Characterization

1. Waste management characterization, manifesting, and coordination of transportation and disposal.

For START/US EPA:

1. Provide oversight of waste management characterization and manifesting activities.

All Groups Designated Meeting Location: FTC.

8. Special Instructions

Interim decon processes shall follow best practices.

All personnel will report to designated meeting location at 0700 and work activities will conclude at 1900. All work permit activities will be completed within the allotted permit time and in accordance with the Fatigue Management Plan.

Ensure all Best Management Practices (BMPs) are in place and utilized.

SAFETY INSTRUCTIONS:

For vacuum truck operation guidelines, please refer the HASP.

At Frac Tank City:

1. The following procedure shall be used for initial opening of hatch or rear doors of liquid vacuum trucks and hatches of vacuum excavation units:
    a. Approach the hatch to be opened with a calibrated five gas monitor and a benzene monitor.
    b. Personnel performing this task must wear a full face respirator with organic vapor cartridge.
    c. Slightly open the hatch and take VOC, H2S, LEL, Oxygen, CO and benzene readings.
    d. If readings are greater than 10 ppm H2S, 10% LEL, 25 ppm CO or 25 ppm benzene then personnel shall close the hatch and utilize SCBA prior to opening the hatch.
2. Operations - Respiratory protection may be required depending on periodic monitoring results. Wear a half-mask respirator equipped with an organic vapor cartridge when 0.5 ppm benzene is detected. Wear a full-face respirator equipped with an organic vapor/acid gas cartridge when benzene is at 5 ppm to 25 ppm.

Please refer to the respective agencies/contractors Fatigue Management Plan to ensure proper rest periods.

Process for Reporting Potentially Hazardous Materials:

If you observe a potentially hazardous material which is not spill related, notify field safety officer and evacuate the area. Do not let anyone into the area unless it is Enbridge Safety and/or Operations Inspector. Immediately report all details to the Enbridge Safety Office at 269-781-1913. The Enbridge Safety Office will alert the Emergency Response Center or call (911). Notifications will go to Calhoun County EMS or Kalamazoo County EMS, EPA, DEQ and Pollution Emergencies.

Submerged Oil Assessment Special Purpose Meeting: Daily at 1100, Trailer #2

Submerged Oil Assessment

1. Continue refinement of 2012 Submerged Oil Recovery Plan.
2. Conduct poling activities throughout the Kalamazoo River, Morrow Lake Delta, and Morrow Lake. (10 Teams)
3. Conduct coring activities throughout the Kalamazoo River, Morrow Lake Delta, and Morrow Lake.
4. Review sheen tracking information from the field.
5. Continue sampling and monitoring of cylindrical sampling devices.
6. Collect velocity data within Morrow Lake. (1 team)

For START/US EPA and DEQ:

1. Oversee and document Submerged Oil Assessment work activities.

Submerged Oil Science

1. Continue implementation of the hydrodynamic model to determine movement of submerged oil.
2. Continue development of Submerged Oil Quantification.

For START/US EPA:

1. Oversee and document Submerged Oil Science work activities.

Submerged Oil Compliance

1. Continue to complete ecological assessments at sites determined by the Submerged Oil Assessment Group.
2. Track previously submitted MDEQ applications for sediment removal.

For DEQ:

1. Oversee and document Submerged Oil Compliance work activities.

Submerged Oil Recovery

1. Implement sheen management activities as necessary.

Submerged Oil Monitoring

1. All odor complaints will be reported to US EPA and MDCH within 30 minutes of receipt by the odor response team (Monday through Saturday 0700 – 1900). 7. Work Assignments

Containment Science

1. Refine the hydrodynamic model and concepts of the Plan for Preventing Migration of Oil Past the Morrow Lake Dam.
2. Introduce new variables to enhance the potential sediment trap locations.
3. Develop subsurface containment strategies throughout the Kalamazoo River system to prevent recontamination of the Morrow Lake fan.

Containment Compliance

1. Monitor submitted MDEQ permit application for toolbox activities in the Kalamazoo River.
2. Monitor submitted MDEQ application for permit for the Kalamazoo River Sediment Control Structures (13 sites).

Containment Recovery

1. Utilize resources to contain and collect sheen and surface oil as necessary.
2. Perform containment strategies throughout the Talmadge Creek and Kalamazoo River including the following tasks:
   a) Deploy shoreline containment boom as required.
   b) Complete sheen management as required.
3. Maintain three Control Points: MP 5.75 (Ceresco), MP 15.65 (BC Dam), and MP 37.75 (E4).
4. Maintain Protective Containment sites (9 sites total).
5. Maintain installed Kalamazoo River Sediment Control Structures.

Containment Monitoring

1. Identify control points and protective containment locations requiring further clean up or maintenance action.
2. Record and document sheen observations in main channel and overbank areas, and conduct sheen testing, if necessary. Report sheen observations back to operations section chiefs for monitoring and response.
3. All odor complaints will be reported to US EPA and MDCH within 30 minutes of receipt by the odor response team (Monday through Saturday 0700 – 1900). Complainants will then be contacted to schedule an odor response site visit or receive additional complaint information if no on-site response requested. Response evaluation will be reported to agencies and complainants upon completion. Samples will be analyzed at a 24-hour turnaround time.

All Groups: Designated Meeting Location: ICP

8. Special Instructions

NRDA Trustees will be conducting recreational use surveys along the Kalamazoo River at river access points through Autumn 2012.

No vessels will travel over the E4 control point at MP 37.75 without prior authorization from the Containment Branch Director. Detailed work instructions will be provided to all team members through daily work orders.

No water operations will commence before 0700 and will conclude by 1900. All land based activities will begin at 0700 with adequate lighting. In accordance with the Fatigue Management Plan, all work permit activities will be completed no later than 1900.

Rowe Island, MP 38.50-MP 38.75, is a No Go Zone – Environmental Sensitive Area.

SAFETY INSTRUCTIONS:
Photo Ionization (VOCs) / Four Gas Detectors (O2, CO, LEL and H2S) and Direct Reading Instrument for Benzene will be used for air monitoring during debris removal activities.

Hexane is flammable and may be harmful in contact with skin. When handling hexane and sheen test samples containing hexane, wear approved safety glasses, disposable nitrile gloves and keep away from ignition sources. Properly dispose of sheen test samples containing hexane.

Process for Reporting Potentially Hazardous Materials:
If you observe a potentially hazardous material which is not spill related, notify field safety officer and evacuate the area. Do not let anyone into the area unless it is Enbridge Safety and/or Operations Inspector. Immediately report all details to the Enbridge Safety Office at 269-781-1913. The Enbridge Safety Office will alert the Emergency Response Center or call (911). Notifications will go to Calhoun County EMS or Kalamazoo County EMS, EPA, DEQ and Pollution Emergencies.

Communication Check: Communication Check will be tested Mondays and Thursdays by Enbridge Safety Office at 1200 hours.

SPECIAL NOTATION ON WEATHER MESSAGING:
See daily updates for additional weather information.

Enbridge Safety is responsible for weather on-site and they are supported by the NOAA / NWS Grand Rapids Weather Office.

Enbridge Safety will maintain consistent weather messages by following the established format of presenting daily and extended forecast, river depth, hydrologic predictions, and the five day quantitative precipitation forecast. The compilation of information will be presented through daily briefings. Enbridge Safety will continue the current practice of issuing a daily forecast to the field safety staff by posting NWS updates in various locations around the Incident Command Post.

In the event of severe weather warnings and alerts, the NWS Grand Rapids Center will contact the Enbridge Safety Office using the Enbridge Safety Radio System between the hours of 0700-1800 hours. If severe weather warning and alerts are occurring from 1800-0700, NWS Grand Rapids Center will contact the Enbridge Safety Office by phone at: **269-781-1913** and DK Security by phone at: **269-781-1911**. These numbers are in operation 24/7. Enbridge Safety will initiate the notification process by using the Call-EM-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews.

- *Severe Weather Alerts:* report to shelter when the county activates their warning sirens.
- *Fire/Building Evacuation Alert*: Report to assigned evacuation point. Follow Air Horn Procedure: Series of Three 1 second blasts.

Weather related cancellation or concerns call 269-781-1914

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Instructions
Operational Period: 6/7/12 (0700hrs) to 6/14/12 (0700hrs)

River Opening: Be advised that the Kalamazoo River between MP – 2.75 and MP 2.25 has been opened to the public. Public recreational activities are to be expected on the river in this segment. Be courteous and respectful to members of the public at all times. Be aware that members of the public may be present in closed segments of the river or work areas.

Weather: Review weather information prior to commencing work each day. Be aware of changes in the weather conditions and ensure proper controls are implemented to address the weather hazards such as: Cold, Wind, Rain, Ice, Fog, Frost, etc. Take actions in accordance with instructions provided by supervisory personnel and as received through the Call-Em-All and PTT systems.

Sunscreen: Sunscreen should be applied to exposed skin, and not just if you are going to be in the sun. UVB rays cannot penetrate glass windows, but UVA rays can, leaving you prone to these damaging effects if unprotected.

PPE: Be prepared for changing weather conditions by wearing, and/or having available, appropriate cold weather gear and approved safety footwear with appropriate soles for use on slippery ground conditions due to frost, ice and rain. When PFDs are required you must ensure that they are United States Coast Guard approved and are the outermost layer, with reflective vest worn under the PFD.

Vehicles: Follow speed limits and adjust speed as necessary for road conditions. Clear all windows of frost before driving. Make sure your vehicle is in proper working condition.

SPECIAL NOTATION ON WEATHER and HAZARD ALERT MESSAGING:
(See daily updates for additional weather information).

Enbridge Safety will maintain consistent weather messages by compiling information and present through daily briefings. Weather forecast updates will be distributed to field safety staff for further communication in the field. Enbridge Safety is responsible for communicating weather alerts based on information received through the Weather TAP system and text messages received from the National Weather Service in Grand Rapids.

In the event of severe weather warnings and alerts, Enbridge Safety will be monitoring via the Weather TAP system. Enbridge Safety will initiate the notification process by using the Call-Em-All system to Field Safety Staff and Operations. Operations in turn will contact their Operation Field Inspectors. The Operation Field Inspector will communicate the necessary plan with their field work crews. DK Security will be notified by Enbridge Safety by phone from 1800 – 0700 hours.

Severe Weather Alerts: Take appropriate shelter when the county activates their tornado warning sirens. In the Incident Command Post, report to the designated tornado shelter rooms. Where appropriate shelter is not available, lie flat in a nearby ditch or depression and cover your head with your hands. Be aware of potential for flooding and flying debris.

Note: Emergency notification siren systems will be tested on the first (1st) Saturday of each month in Calhoun and Kalamazoo Counties. Typically a siren is sounded at 1200 hours; however, this could be delayed due to current circumstances in the county.

Fire/Building Evacuation Alert: In the event of a fire, utilize air horn to initiate series of three 1 second blasts. Must report to the designated evacuation point upon hearing a series of three 1 second air horn blasts. **Please close all doors, and turn lights out upon leaving your area.**

Call the Safety Office at 269-781-1914 if you have weather related concerns. Call 269-781-1913 for other Safety related issues.

Safety Orientations: Held Monday - Friday at 0800 at the Operations Center (1601 Pratt Avenue)

Boat Safety Awareness Orientation: Available by appointment Monday – Friday, contact the Safety Office.

If you see wildlife (dead or alive) that is impacted by the oil, call Bob Doherty [redacted]

Field Safety Staff

Communication Check: Communication Check will be tested twice a week via the Verizon Push To Talk (PTT) system by Enbridge Safety office on Monday's and Thursday's at 1200 hours.

Call-Em-All: Will be tested by Enbridge Safety office on Wednesday's at 1200 hours.

First Aid Kits: There are four (4) kits located within the Incident Command Post Facility. Please review the Evacuation Plan map for locations.

KALAMAZOO RIVER/ENBRIDGE SPILL
General Safety Message
Operational Period: 6/7/12 (0700hrs) to 6/14/12 (0700hrs)

DAY 1:
Thursday, June 7, 2012

Life Saving Rule #4 – Ground Disturbance

Dig Safely. Always follow procedures for locating, positively identifying and excavating buried facilities. Protect yourself, your community and the environment by protecting our pipelines – ensure that all buried facilities are identified and marked prior to excavation.

By building a strong foundation of safe practices we can protect our most valuable resource – our people.

**** Make certain you know and obey the Enbridge 10-2-1 Rule ****

DAY 2:
Friday, June 8, 2012

Right/Responsibility to Stop Work

Every worker performing any work in/on any work site location has the authority and responsibility to immediately stop unsafe work and at risk behaviors.

A few examples are;

- Working with tools or equipment that have been altered or modified.
- Working in an unsafe manner (horse play, disregard for rules, etc.) that endangers yourself and others.

Regardless of how urgent or important an activity may be, safety, health or environmental protection shall not be compromised.

DAY 3/ DAY 4:
Saturday, June 9 – Sunday, June 10, 2012

Personal Conduct & Community Relations

In the towns of Marshall, Battle Creek, and the surrounding areas, we are visitors to the communities and neighborhoods.

Our work requires us to travel within and between locations, utilize local services, and interact with the citizens of the areas.

It is imperative that we conduct ourselves with the utmost level of respectfulness to the people, the environment, and the law.

Respect Citizens and Their Property including:

- **Merchants**
- **Local Authorities**
- **The General Public**

Drive Safe and Be Courteous

Preserve the Environment

Follow All State and Federal Laws

DAY 5:
Monday, June 11, 2012

Chocking Vehicles and Equipment

Effective chocking practices are important to operator and public safety, and for avoiding unnecessary costs due to damages. A vehicle, trailer, or other mobile equipment moving uncontrollably can have devastating consequences. Chocks prevent the mobile equipment from inadvertently moving. Chocks slide tightly underneath and behind the wheels.

Guidelines for Effective Chocking:

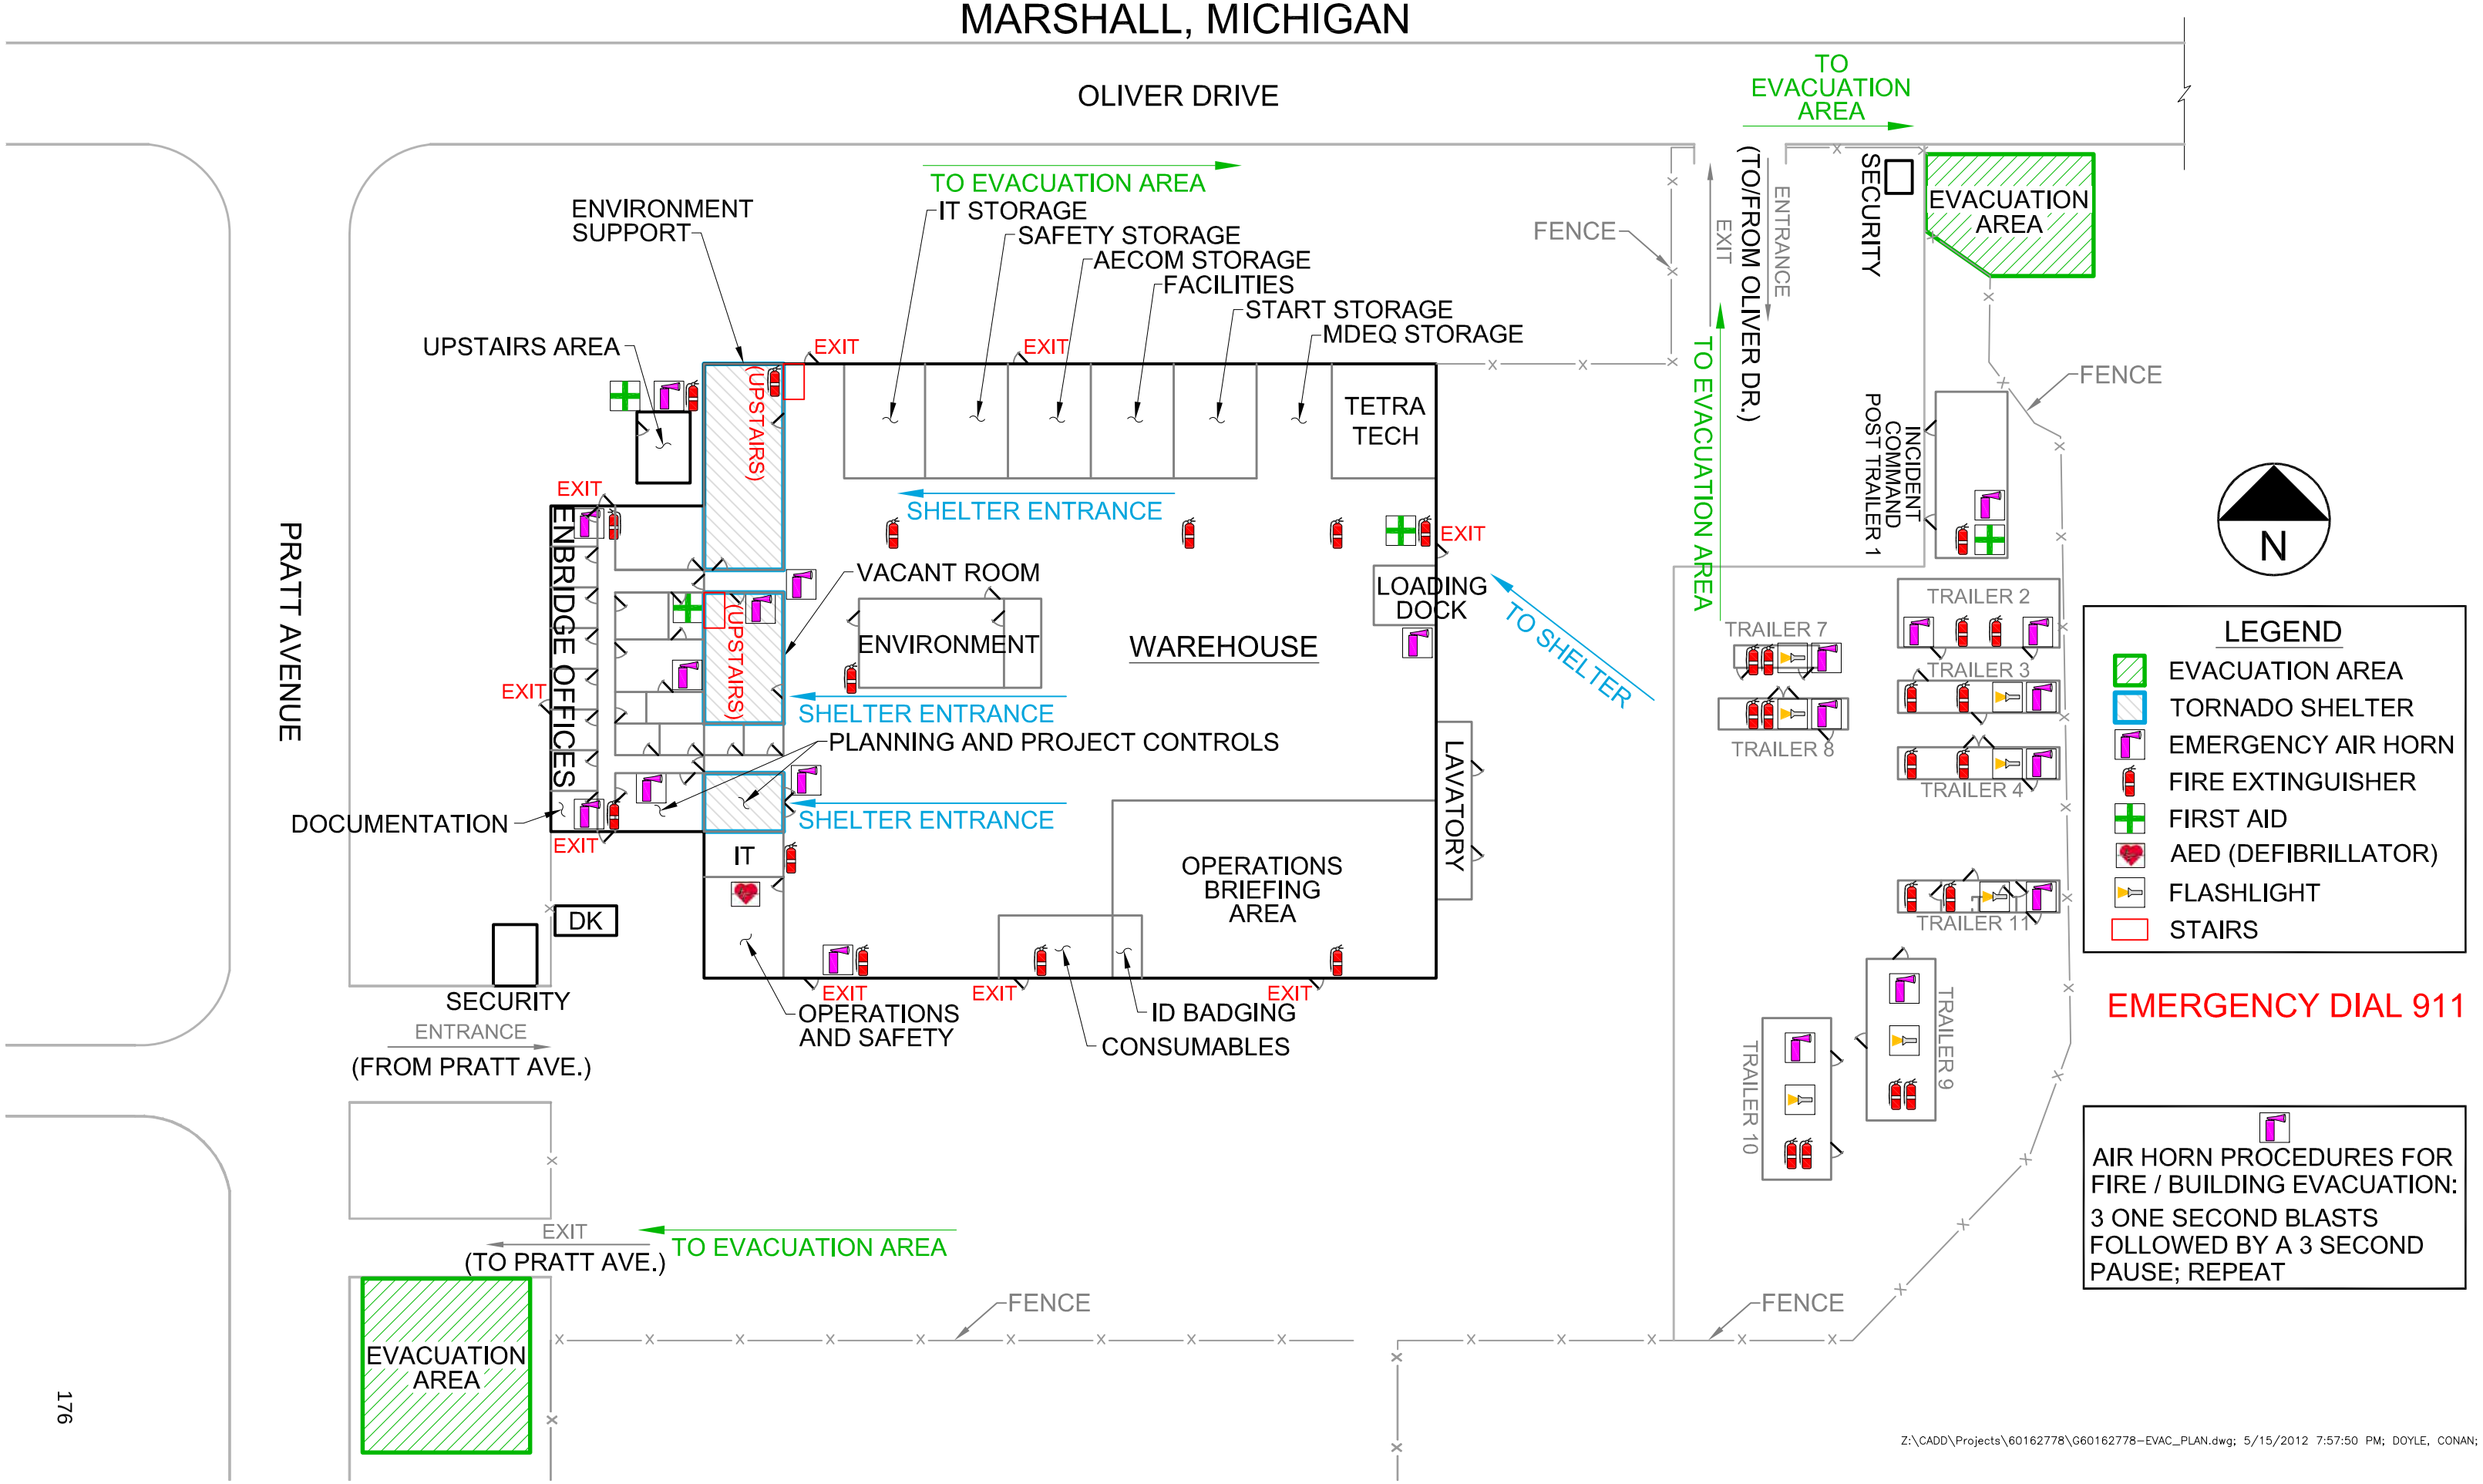
- Attempt to park the equipment on the flattest surface whenever possible.
- Use chocking and blocking in addition to other methods, including the use of the parking brake, parking in gear or turning the wheels into a curb or berm.
- The height, width and length of the chock should be large enough to prevent the mobile equipment from rolling over it. Lay the chocks side-by-side if necessary to cover the width of the tire.
- Do not unhook trailers or equipment without chocking first.

Remember: The heavier the mobile equipment, the lesser the slope required for it to begin to roll.

DAY 6:
Tuesday, June 12, 2012

Hand Tools

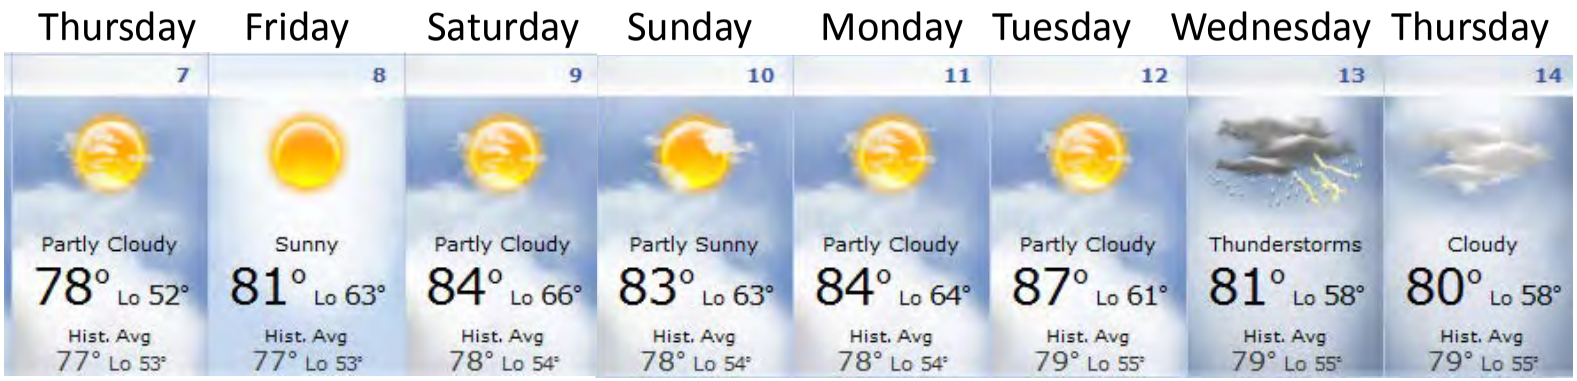
- Make certain to choose the correct tool for the job.
- Only use tools that are in good working condition.
- Use all tools properly an only for the task that they were intended. If you don't know how to use a tool ask someone who does to show you how.
- Carry and store tools safely.



DAY 7:
Wednesday, June 13, 2012

Water Operations & Boat Safety

The boat captain is responsible for the safety of the crew. Enbridge Safety's objective is to minimize potential risks to operators, passengers, and bystanders by:



- Ensuring all persons have a general understanding of boating safety.
- Utilizing well defined operations guidelines.
- Ensuring operator competency.
- Performing vessel inspections.
- Conducting passenger briefings.
- Following PPE requirements.
- Inspection of all vessels.

CASE NARRATIVE
Alpha Analytical

ETR: 1204031
Project: Enbridge Line 6B MP 608

All analyses were performed according to the Alpha Analytical quality assurance program and documented Standard Operating Procedures (SOPs). The analytical results contained in this report were performed within holding time, and with appropriate quality control measures, except where noted. A summary of all state and federal accreditations is provided within this report. Blank correction of results is not performed in the laboratory for any parameter. Alpha Analytical certifies that the test results within meet all of the requirements of NELAC, for all NELAC accredited parameters.

Sample Receipt

Samples (1204031-01 through -08) were received in good condition, between 2° and 6°C, and without discrepancies.

Samples were released for analysis on 4-20-2012. Samples were frozen until scheduled for analysis. Per the customer's request, all samples (1204031-01 through -08) were analyzed for PAH, BIO and SHC.

Sample Preparation and Extraction

Samples 1204031-01 and -02 were extracted on 4-30-2012 (prep batch 1204031_35SED). Samples 1204031-03 through -08 were extracted on 5-01-2012 (prep batch 1204031_35sheen).The extraction and preparation procedure was performed according to the Alpha Analytical SOP (stated below) but with the following deviation:

1. The extraction for samples 1204031-01 and -02 was performed on a smaller sample size than the method specified representative sample due to a strong hydrocarbon odor. In addition, these samples were spiked with five times the amount of surrogate due to the potentially high levels of petroleum present.

2. Duplicate precision is measured with this prep batch but performed and reported on a sample from another ETR 1204035.

The observations noted on the *Forensic Preparation Checklist* should neither have any adverse affect on the analysis nor should they impact data quality for samples in this ETR.

Alkylated Polynuclear Aromatic Hydrocarbons, Steranes, Triterpanes, and Triaromatic Steroids - Sediments

Polynuclear aromatic hydrocarbons and geochemical biomarkers were analyzed following Alpha Analytical SOP *Analysis of Parent and Alkylated Polynuclear Aromatic Hydrocarbons, Selected Heterocyclic Compounds, Steranes, Triterpanes, and Triaromatic Steroids by Gas Chromatography/Mass Spectrometry with Selected Ion Monitoring (SOP O-008, Issue No. 7, 07/07/2011).* Sediment samples are spiked with surrogate compounds and extracted by *Shaker Table Extraction (SOP OP-013, Issue No. 5, 07/14/2011).* Solvent extracts are dried over sodium sulfate and concentrated to a 4mL volume. An aliquot of the extract based on *Gravimetric Determination (SOP OP-017, Revision No. 3, 07/06/2011)* is processed through an alumina column (*Alumina Column Cleanup of Organic Extracts, SOP OP-009, Issue No. 3, 07/14/2011*), concentrated to a 900uL volume and spiked with internal standard for instrument analysis. The average weight of all samples included in the extraction batch is used as the weight for the blank, laboratory control sample, and laboratory control sample duplicate. The final value is rounded accordingly. Qualitative identifications are confirmed by analyzing standards under the same conditions used for samples, comparing mass spectra, GC retention times, and patterns generated from reference oils. Quantification is based on response factors derived from a multi-level initial calibration using internal standard techniques.

Alkyl homologues are quantified using the response factor of the parent PAH compound. Target triterpane biomarker concentrations are quantified using the response factor of Hopane and the steranes and steroids are quantified using the response factor of 5β(H)Cholane. All enclosed data was evaluated below the reporting limits to three times signal to noise. The sample specific method detection limit is the value reported for all compounds which are not detected ("U" qualified). Any sample preparation method deviations can be found in the "Sample Preparation and Extraction" section of this document or noted on the *Forensics Preparation Checklist* located in the sample preparation document.

1. The method blank S043012B07 contained low-level target compounds. The single component compounds were detected at less than 5x the sample specific method detection limit (MDL), the multi-component compounds were detected at less than 10x the MDL of the associated single component compound. The method blank met the acceptance criteria (with no more than two compounds outside criteria) therefore no corrective action was required. Associated field sample results are flagged with "B" qualifiers if the concentration of the analyte in the sample is less than 10x the concentration in the blank.

2. Concentrations for compounds flagged with "G" qualifiers may be biased high due to matrix interference included in the quantitation.

3. The standard reference material (SRM) 1941b was inadvertently not extracted with the sediment samples; therefore no SRM is included in this data package.

Alkylated Polynuclear Aromatic Hydrocarbons, Steranes, Triterpanes, and Triaromatic Steroids - GLOB/Sheen

Polynuclear aromatic hydrocarbons and geochemical biomarkers were analyzed following Alpha Analytical SOP *Analysis of Parent and Alkylated Polynuclear Aromatic Hydrocarbons, Selected Heterocyclic Compounds, Steranes, Triterpanes, and Triaromatic Steroids by Gas Chromatography/Mass Spectrometry with Selected Ion Monitoring (SOP 2247, Rev. 2, 04/02/2012).* GLOB and sheen samples are spiked with surrogate compounds and extracted by *Shaker Table Extraction (SOP OP-013, Issue No. 5, 07/14/2011).* Solvent extracts are dried over sodium sulfate and concentrated to an appropriate volume based on *Gravimetric Determination (SOP OP-017, Revision No. 3, 07/06/2011).* The total extract oil weight as determined by gravimetric weighing is used as the weight for the GLOB samples. The average weight of all samples included in the extraction batch is used as the weight for the blank, laboratory control sample, and laboratory control sample duplicate. The final value is rounded accordingly. Qualitative identifications are confirmed by analyzing standards under the same conditions used for samples, comparing mass spectra, GC retention times, and patterns generated from reference oils. Quantification is based on response factors derived from a multi-level initial calibration using internal standard techniques. Alkyl homologues are quantified using the response factor of the parent PAH compound. Any sample preparation method deviations can be found in the "Sample Preparation and Extraction" section of this document or noted on the *Forensics Preparation Checklist* located in the sample preparation document.

1. The method blank SO050112B01 contained low-level target compounds. The single component compounds were detected at less than the sample specific reporting limit (RL), the multi-component compounds were detected at less than 2x the RL of the associated single component compound. The method blank met the acceptance criteria (with no more than two compounds outside criteria) therefore no corrective action was required. Associated field sample results are flagged with "B" qualifiers if the concentration of the analyte in the sample is less than 10x the concentration in the blank.

2. Concentrations for compounds flagged with "G" qualifiers may be biased high due to matrix interference included in the quantitation.

3. Sheen samples are reported, using an initial amount of one, as ng (per sample).

4. The Alaska North Slope Crude reference oil (SO050512ANS02) analyzed with the samples has the % recovery of Benzo[g,h,i]perylene above the 135% acceptance criteria at 143%. Since this was the only compound outside criteria no further corrective action was taken.

Total Saturated Hydrocarbons and Total Petroleum Hydrocarbons by GC/FID - Sediments

Samples for total saturated hydrocarbons and total petroleum hydrocarbons were analyzed following the procedures in Alpha Analytical SOP *Total Petroleum and Saturated Hydrocarbons by Gas Chromatography/Flame Ionization Detector (SOP O-003, Issue No.7, 08/15/2011)* Method 8100/8015mod. Samples were prepared as stated above for the PAH analysis. A portion of the final extract was analyzed for GC/FID (gas chromatography with flame ionization detection). A multi-level initial calibration over the n-alkane range from C9-C40 was evaluated and quantified using internal standard techniques prior to sample analysis. All enclosed data was evaluated below the reporting limits to three times signal to noise. The sample specific method detection limit is the value reported for all compounds which are not detected ("U" qualified). Any sample preparation method deviations can be found in the "Sample Preparation and Extraction" section of this document or noted on the *Forensics Preparation Checklist* located in the sample preparation document.

The following compounds co-elute with PAH surrogates and/or internal standards which potentially bias the results high: n-Octadecane (Cl8) - Phenanthrene-d10 and n-Pentacosane (C25) - Chrysene-d12. If a positive bias is determined to be present the compounds will be reported with a "C" qualifier.
