Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41587 MS/MSD data for DRO is not related to this project's samples.

Batch 41636 MS/MSD data for Beryllium is not related to this project's samples.

Batch 41587 samples 1206299-01, 1206299-02, 1206299-03, and 1206299-04 DRO surrogate recoveries were above control limits. The DRO results in these samples may be biased high due to matrix interference.

Batch 41609 sample SBKR1150L540S060712S014 MS/MSD recoveries for Styrene were below control limits. The parent sample reporting limits for this compound may be biased low. The Method Blank had a small positive result for Bromomethane. Alls samples in this work order were ND for this compound.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41651sample SBKR1150L544S061112S010 MS recovery for 1,2,4-Trichlorobenzene, and RPD between the MS/MSD for Naphthalene were outside control limits. Both the MSD recovery and RPD for 1,2,4- Trichlorobenzene, and the individual MS?MSD recoveries for Naphthalene met quality control criteria. No data requires qualification. The MS recovery and RPD for 1,2,3-Trichlorobenzene were outside control limits. The sample reporting limits may be biased low for this analyte.

Batch 41652 MS/MSD data for Volatiles is not related to this project's samples.

Batch 41656 samples 1206416-02, 1206416-03, 1206416-04m and 1206416-06 PAH internal standard recoveries were below the lower control limit, but >20%. Per the client’s request, the results associated with the IS are being reported and should be considered as estimated for the noted PAH compounds. Sample 1206416-07 had a high surrogate recovery, but this sample was ND for all PAH compounds. NO data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41670 LCSD recovery for 4-Methyl-2-pentanone was above control limits, but all samples in this quality control batch were ND for this compound. The MS/MSD data for Volatiles is not related to this project's samples.

Batch 41652 sample SBKR1325L507S061212S007 MS/MSD recoveries for Trichlorofluoromethane were below the lower control limit. The sample reporting limits may be biased low for this analyte.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41789 sample SBKR1350L517S061412S006 MS recoveries for Nickel and Vanadium were control limits. Both the MSD recoveries and RPDs met quality control criteria. No data requires qualification.

Batch 41780 LCS recovery and sample SBKR1350L517S061412S006 RPD recovery for one acid surrogate was below control limits. This surrogate is not associated with any of the reported PAH compounds. No data requires qualification. Sample 1206567-08 had a high surrogate recovery for 4-Terphenyl-d14. Any PAH hits in this sample may be biased high.

Batch 41759 sample SBKR1350L517S061412S006 MS recovery for Tetrahydrofuran and RPD for Bromomethane were below control limits. Both the respective MSD and/or MS recoveries and RPDs met quality control criteria. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41789 MS/MSD data for Metals is not related to this project's samples.

Batch 41803 sample SBKR1350L510S061312S007 MS recoveries for Molybdenum and Nickel were below control limits. Both the MSD recoveries and RPDs met quality control criteria. No data requires qualification for these two elements. The MS/MSD recoveries for Beryllium were below control limits. The corresponding result in the parent sample may be biased low for Beryllium.

Batch 41780 MS/MSD data for PAHs is not related to this project's samples. The Method Blank and LCS had low recoveries for one of the acid surrogates. None of the PAHs are associated with this surrogate. Sample 1206568-01 had a high surrogate recovery for 4-Terphenyl-d14. The PAH compounds that had reportable results, bay be biased high due to matrix interference.

Batch 41794 MS/MSD data for PAHs is not related to this project's samples.

Batch 41762 Method Blank had a reportable result for Methylene Chloride. All samples in this quality control batch were ND for Methylene Chloride.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41883 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 41868 MS/MSD data for PAHs is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41883 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 41868 MS/MSD data for PAHs is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41883 sample SBKR0600R511S062012S005 MS/MSD recoveries for Beryllium, Molybdenum, Nickel, and Vanadium were below control limits. The sample results may be biased low for these elements due to matrix interference.

Batch 41868 sample SBKR0600R511S062012S005 MSD recoveries for Anthracene and Benzo(b)fluoranthene were above control limits. Both the MS recoveries and RPDs met quality control criteria. No data requires qualification.

Batches 41854 and 41907 MS/MSD data for Volatiles is not related to this project's samples.

Case Narrative

PThe extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batches 41883 and 41885 MS/MSD data for Metals is not related to this project's samples.

Batch 41868 MS/MSD data for PAHs is not related to this project's samples.

Batch 41833 LCS recovery for 4-Methyl-2-pentanone was above control limits, but all samples in this quality control batch were ND for this compound. No data requires qualification. Sample SBKR0750I502S061812S008 MS recovery for trans-1,4-Dichloro-2-Butene, and MSD recovery for 1,1-DCE were below control limits. Both the MSD, and MS recovery, respectively, and RPDs met quality control criteria. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41885 MS/MSD data for Metals is not related to this project's samples.

Batch 41868 MS/MSD data for PAHs is not related to this project's samples.

Batch 41888 sample SBKR1200R501S061912S006 MS recovery for Benzo(b)fluoranthene and MSD recovery for Anthracene were above control limits. Both the MS and MSD recoveries, respectively, and RPDs met quality control criteria. No data requires qualification.

Batch 41833 LCS recovery for 4-Methyl-2-pentanone was above control limits, but all samples in this quality control batch were ND for this compound. The MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Batch 41907 MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Batch 41908 LCS recovery for 4-Methyl-2-pentanone was above control limits, but all samples in this quality control batch were ND for this compound. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41885 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 41888 MS/MSD data for PAHs is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41951 sample SBKR0625R503S062112S006 MSD recovery for DRO was below control limits. Both the MS recovery and RPD met quality control criteria. No data requires qualification. The MS/MSD recoveries for ORO were below control limits due to matrix interference. The result for ORO in the parent sample may be biased low.

Batch 41955 sample SBKR0625R503S062112S006 MS/MSD recoveries for Beryllium, Molybdenum, and Nickel, and MSD recovery for Vanadium were below control limits. The results for these elements in the parent sample may be biased low.

Batch 41943 LCS recovery for 4-Methyl-2-pentanone was above control limits. All samples in this quality control batch were ND for this compound. The MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Batch 41950 samples 1206817-02, 1206817-04, 1206817-05, 1206817-06, 1206817-08, 1206817-09, 1206817-10, and 1206817-12 PAH internal standard recoveries were below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the marked PAH compounds.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41951 MS/MSD data for DRO/ORO is not related to this project's samples. No data requires qualification.

Batches 41955 and41996 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 41950 sample 1206818-06B PAH internal standard recovery was below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the marked PAH compounds.

Batch 41950 sample 1206818-07B PAH analysis had one low surrogate recovery de to matrix interference. Target analytes were not affected by the interference. No qualification is necessary.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 41996 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 42036 MS/MSD data for Metals is not related to this project's samples. No data requires qualification.

Batch 4029 LCS recovery for Chloroethane was above control limits, but all samples in this quality control batch were ND for this compound . The MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Batch 42017 sample 1206892-08 PAH internal standard recovery was below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the marked PAH compounds.

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 42036 sample SBKR0925R504S062512S005 MS/MSD recoveries for Nickel were below control limits. The MS recovery for Vanadium was above control limits. The result for Nickel in the parent sample may be biased low. Both the MSD recovery and RPD for Vanadium met quality control criteria. No data requires qualification.

Batch 42029 LCS recovery for Chloroethane was above control limits, but all samples in this quality control batch were ND for this compound. No data requires qualification. Sample SBKR0925R504S062512S005 MS recovery for 4-Methyl-2-Pentanone was above control limits. The parent sample was ND for this compound. No data requires qualification. The MS/MSD recoveries for trans 1, 4-Dichloro-2-Butene were below control limits. The corresponding reporting limit for this compound in the parent sample may be biased low.

Batch 42040 LCS recoveries for 4-Methyl-2-Pentanone, Tetrachloroethene, 2-Hexanone, and Tetrahydrofuran were above control limits, but all samples in this quality control batch were ND for these compounds. No data requires qualification.
