Re: **Marshall KRRI 1250I 12/14/12** Work Order: **1212557**

Dear Bryan,

ALS Environmental received 10 samples on 14-Dec-2012 04:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 71.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Ann Preston

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 45493 data for ORO is not related to this project's samples. No data requires qualification.

Batch 45484 MS/MSD data for Vanadium is not related to this project's samples. No data requires qualification.

Batch 45482 LCS/LCSD recoveries for several Volatile compounds were above control limits, but all samples in this quality control batch were ND for these compounds. No data requires qualification. Sample SBKR1250I507S121412S004 MS recovery for 4-Methyl-2-pentanone was above control limits. Both the MSD recovery and RPD met quality control criteria. No data requires qualification.

Batch 45492 sample 1212557-03 PAH reporting limits are elevated due to dilution for high concentrations of non-target analytes. Samples 1212557-03, 1212557-08. and 1212557-10 PAH internal standard recoveries were below the lower control limit, but >20%. Per the client's request, the results associated with the IS are being reported and should be considered as estimated for the compounds marked with an asterisk. Sample 1212557-10 surrogate recoveries are unavailable due to dilution below the calibration range. Sample 1212557-10 PAH reporting limits are elevated due to not being able to concentrate the sample extract down to the desired final volume.

Re: **Marshall KRRI 1275L 12/18/12** Work Order: **1212695**

Dear Bryan,

ALS Environmental received 5 samples on 19-Dec-2012 08:00 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 44.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Ann Preston

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 45512 MS/MSD data for Volatiles is not related to this project's samples. No data requires qualification.

Re: **Marshall KRRI 1250-1275I,1300L 12/17/12** Work Order: **1212696**

Dear Bryan,

ALS Environmental received 9 samples on 19-Dec-2012 08:00 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 58.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Ann Preston

Case Narrative

The extraction procedure used to prepare the soil samples for DRO and PAH analyses in this work order was a modification of the standard 3541 procedure. At the request of the client, a 10 gram sample aliquot dried with hydromatrix is used for extraction as outlined in ALS SOP HN-EXT-003(EN)-R01. All samples extracted starting on 10/1/2011 were prepared using this modified SOP.

Batch 45512 sample SBKR1275I510S121712S005 MS/MSD recoveries for Acetone were above control limits. The corresponding result in the parent sample was non-detect. No qualification is required for Acetone. The MS/MSD recoveries for Styrene and MSD recovery for Chloroethane were below control limits. The corresponding reporting limit for Styrene in the parent sample may be biased low. The MS recovery and RPD for Chloroethane met quality control criteria. No qualification is required for Chloroethane.

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
SD	Serial Dilution
TDL	Target Detection Limit

Units Reported	Description
% of sample	Percent of Sample
µg/Kg	Micrograms per Kilogram
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Marshall FTC Sump 12/7/12** Work Order: **1212305**

Dear Alison,

ALS Environmental received 1 sample on 07-Dec-2012 03:35 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 10.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Ann Preston

CASE NARRATIVE
Alpha Analytical

ETR: 1212022
Project: AECOM Enbridge Line 6B MP 608

All analyses were performed according to the Alpha Analytical quality assurance program and documented Standard Operating Procedures (SOPs). The analytical results contained in this report were performed within holding time, and with appropriate quality control measures, except where noted. A summary of all state and federal accreditations is provided within this report. Blank correction of results is not performed in the laboratory for any parameter. Alpha Analytical certifies that the test results within meet all of the requirements of NELAC, for all NELAC accredited parameters.

Sample Receipt

Samples (1212022-01 through -04) were received in good condition, between 2° and 6°C, and without discrepancies. Samples were released for analysis on 12-14-2012. Samples were frozen until scheduled for analysis. Per the customer's request, all samples (1212022-01 through -04) were analyzed for PAH/BIO, SHC and TOC.

Sample Preparation and Extraction

Samples were extracted on 12-20-2012 (prep batch 1212022X). The extraction and preparation procedure was performed according to the Alpha Analytical SOP (stated below) with the following deviations:

1. All samples were spiked with 500uL of the extraction surrogate solution because of the potential of a high final volume and matrix interference.

2. During the sample homogenization prior to extraction it was noted that all samples contained shells and rocks making the homogenization procedure difficult.

3. Sample 1212022-04 was noted to have a strong hydrocarbon odor.

The observations noted on the *Forensic Preparation Checklist* should neither have any adverse affect on the analysis nor should they impact data quality for samples in this ETR.

Alkylated Polynuclear Aromatic Hydrocarbons, Steranes, Triterpanes, and Triaromatic Steroids – Sediments

Polynuclear aromatic hydrocarbons and geochemical biomarkers were analyzed following Alpha Analytical SOP *Analysis of Parent and Alkylated Polynuclear Aromatic Hydrocarbons, Selected Heterocyclic Compounds, Steranes, Triterpanes, and Triaromatic Steroids by Gas Chromatography/Mass Spectrometry with Selected Ion Monitoring (SOP 2247, Rev. 4, 08/10/2012)*. Sediment samples are spiked with surrogate compounds and extracted by *Shaker Table Extraction (SOP 2261, Rev. 3, 09/06/2012)*. Solvent extracts are dried over sodium sulfate and concentrated to a 4mL volume. A 2mL aliquot of the extract is processed through a silica column (*Silica Gel Cleanup Preparation (Manual), SOP 2267, Rev. 2, 03/21/2012*) and concentrated to a 900uL volume. A 450uL aliquot is taken and spiked with internal standard for instrument analysis. The average weight of all samples included in the extraction batch is used as the weight for the blank, laboratory control sample, and laboratory control sample duplicate. The final value is rounded accordingly. Qualitative identifications are confirmed by analyzing standards under the same conditions used for samples, comparing mass spectra, GC retention times, and patterns generated from reference oils. Quantification is based on response factors derived from a multi-level initial calibration using internal standard techniques. Alkyl homologues are quantified using the response factor of the parent PAH compound. Target triterpane biomarker concentrations are quantified using the response factor of Hopane and the steranes and steroids are quantified using the response factor of 5β(H)Cholane. All enclosed data was evaluated below the reporting limits to three times signal to noise. The sample specific method detection limit is the value reported for all compounds which are not

detected ("U" qualified). Any sample preparation method deviations can be found in the "Sample Preparation and Extraction" section of this document or noted on the *Forensics Preparation Checklist* located in the sample preparation document.

1. The evaluation of the mass ion spectra on 12/22/2012 indicated that ions 219 and 502 had relative abundances slightly above the acceptance criteria. The continuing calibration standards and all samples were acquired under these same instrument conditions.

2. The method blank SS121812B06 contained low-level target compounds. The single component compounds were detected at less than 5x the sample specific method detection limit (MDL) with the exception of Biphenyl and Phenanthrene which are "B" qualified on the Quantitation Report; the multi-component compounds were detected at less than 10x the MDL of the associated single component compound. It was further determined that Biphenyl and Phenanthrene were introduced into the samples through the surrogate solution. As a corrective action, that surrogate solution was removed from the laboratory and was discarded. The method blank met the acceptance criteria (with no more than two compounds outside criteria). Associated field sample results are flagged with "B" qualifiers if the concentration of the analyte in the sample is less than 10x the concentration in the blank.

3. The matrix spike and matrix spike duplicate for sample 1212022-02 recovered low and outside the acceptance criteria (50-125%) for several compounds. Additionally, the relative percent difference (RPD) for Phenanthrene exceeded the limit (30%) at 48%. This variability of the results could be attributed to the heterogeneous nature of the samples and the high concentration of the spiking compounds in the native sample. The LCS/LCSD recoveries passed acceptance criteria for these compounds demonstrating accuracy of the method. The integrations and calculations were reviewed and found to be accurate. See Spike Recovery Summary for individual compounds affected. No further corrective action was taken.

4. The relative percent difference (RPD) for sample 1212022-03 and its duplicate 1212022-03D exceeded the limit (30%) for thirty three (33) compounds with reported concentrations that are greater than the QL in either the native or duplicate extract. The RPD's for the LCS/LCSD met the criteria for all monitored analytes showing that precision of the method was established. This variability of the results could be attributed to the heterogeneous nature of the samples. No further corrective action was taken. See Duplicate Summary Report for individual compounds affected.

5. Sample 1212022-04 required a 2X dilution due to over-calibration concentrations of target compounds. The diluted analyses are only quantified for the compounds that were over the calibration range of the analytical instrument in the un-diluted analyses. Dilutions are reported with a sample name suffix "E" on all forms and electronic data. The sample name in the analytical data (Quantitation Report and Injection Log) may be entered with a suffix "RE" as a keyword requirement for LIMS data transfer.

6. Concentrations for compounds flagged with "G" qualifiers may be biased high due to matrix interference included in the quantitation.

7. The continuing calibration verifications associated with the dilution of sample 1212022-04 were at a concentration of 250ng/mL rather than the customary 500ng/mL. Sample results are not affected

Total Saturated Hydrocarbons and Total Petroleum Hydrocarbons by GC/FID – Sediments

Samples for total saturated hydrocarbons and total petroleum hydrocarbons were analyzed following the procedures in Alpha Analytical SOP *Total Petroleum and Saturated Hydrocarbons by Gas Chromatography/Flame Ionization Detector (SOP 2246, Rev. 4, 04/11/2012)* Method 8100/8015mod. Samples were prepared as stated above for the PAH analysis. A portion of the final extract was analyzed for GC/FID (gas chromatography with flame ionization detection). A multi-level initial calibration over the n-alkane range from C9-C40 was evaluated and quantified using internal standard techniques prior to sample analysis. All enclosed data was evaluated below the reporting limits to three times signal to noise. The sample specific method detection limit is the value reported for all compounds which are not detected ("U" qualified). Any sample preparation method deviations can be found in the "Sample Preparation and Extraction" section of this document or noted on the *Forensics Preparation Checklist* located in the sample preparation document.

The following compounds co-elute with PAH surrogates and/or internal standards which potentially bias the results high: n-Octadecane (C18) - Phenanthrene-d10, n-Pentacosane (C25) - Chrysene-d12, n-Octacosane (C28) – Benzo[b]fluoranthene-d12 and n-Nonacosane (C29) - Benzo[a]pyrene-d12. If a positive bias is determined to be present the compounds will be reported with a "C" qualifier.

1. The method blank SS121812B06 contained low-level target compounds detected at less than 5x the sample specific method detection limit (MDL). The method blank met the acceptance criteria (with no more than two compounds outside criteria) therefore no corrective action was required. Associated field sample results are flagged with "B" qualifiers if the concentration of the analyte in the sample is less than 10x the concentration in the blank.

2. The relative percent difference (RPD) for sample 1212022-03 and its duplicate 1212022-03D exceeded the limit (30%) for n-Octadecane (C18) with reported concentration that is greater than the QL in both the native and duplicate extract, at 56%. The RPD's for the LCS/LCSD and MS/MSD met the criteria for all monitored analytes showing that precision of the method was established. No further corrective action was taken.

Total Organic Carbon by 9060

Total organic carbon was analyzed following Alpha Analytical SOP *Total Organic Carbon and Soot in Soil, Sediment (SOP 2182, Rev. 6, 10/05/2012)* modified from Method 9060 for reporting Total Organic Carbon as the average of two replicate analyses. The samples (approximately 2-5mg) were dried, acidified with phosphoric acid, loaded into an aluminum tin and introduced into a furnace for combustion in a pure oxygen environment. CO_2 was produced in the combustion zone and non-target elements were removed by scrubbing reagents. The resulting CO_2 gas was de-pressurized through a column where it was detected as a function of its thermal conductivity. The amount of CO_2 derived from the sample is directly proportional to the concentration of organic carbonaceous material in the sample.

The analysis for samples may be performed on a larger sample size than the method specified representative aliquot to maximize the detection signal.

1. The initial analyses of samples 1212022-01 and -02 replicate burns exceeded the QC limit (20%) at 60.30% and 59.41% respectively. A double-burn re-analysis was performed with confirming results. The average result is reported only from the initial analyses. No further action was taken.

2. The initial analysis of sample 1212022-03D was rejected because the RPD between the replicate burns exceeded the QC limit (20%). A double-burn re-analysis was performed with all quality control parameters within acceptance criteria. The average result is reported only from the re-analysis. No further action was taken.

3. The relative percent difference (RPD), for the second replicate burn, between sample 1212022-03 and its duplicate 1212022-03D exceeded the limit (25%) at 29%. This may be due to the heterogeneous nature of the sample. The average relative percent difference (RPD) was within QC limits. No further corrective action was taken.

The enclosed results of analyses are representative of the samples as received by the laboratory. Alpha Analytical makes no representations or certifications as to the method of sample collection, sample identification, or transporting/handling procedures used prior to the receipt of samples by Alpha Analytical. Total Saturated Hydrocarbons	**11.0**
Total Petroleum Hydrocarbons (C9-C44)	**225**
Total Resolved Hydrocarbons	**79.4**

Surrogate	% Recovery	Acceptance Range (%)
ortho-Terphenyl	76	40-125
d50-Tetracosane	76	40-125

N/A - Not Applicable
B - Found in associated blank as well as sample.
J - Estimated value, below quantitation limit.
U - The analyte was analyzed for but not detected at the sample specific level reported.
G - Matrix Interference
