Table 7 Data Qualifiers for Utulei WWTP Priority Pollutant Analysis (Results in Tables 8 - 14)		
Constituent Group	Symbol	Interpretation
All	=	Value of constituent with no qualifiers.
	ND	The compound was analyzed for, but was not detected at or above the MRL/MDL (Method Reporting Limit or the Method Detection Limit)
	X	Noted in CAS Case Narrative (Attachment II)
Metals	B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL
Organics	B	The analyte was found in the associated method blank at a level that is significant relative to the sample results
	I	The MRL/MDL has been elevated due to a chromatographic interference
	J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL
	P	The GC or HPLC confirmation criteria was exceeded. The relative difference is greater than 40% between the two analytical results (25% for CLP pesticides)
Dioxins	J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL
	K	Maximum possible concentration was estimated
