Lake Ontario

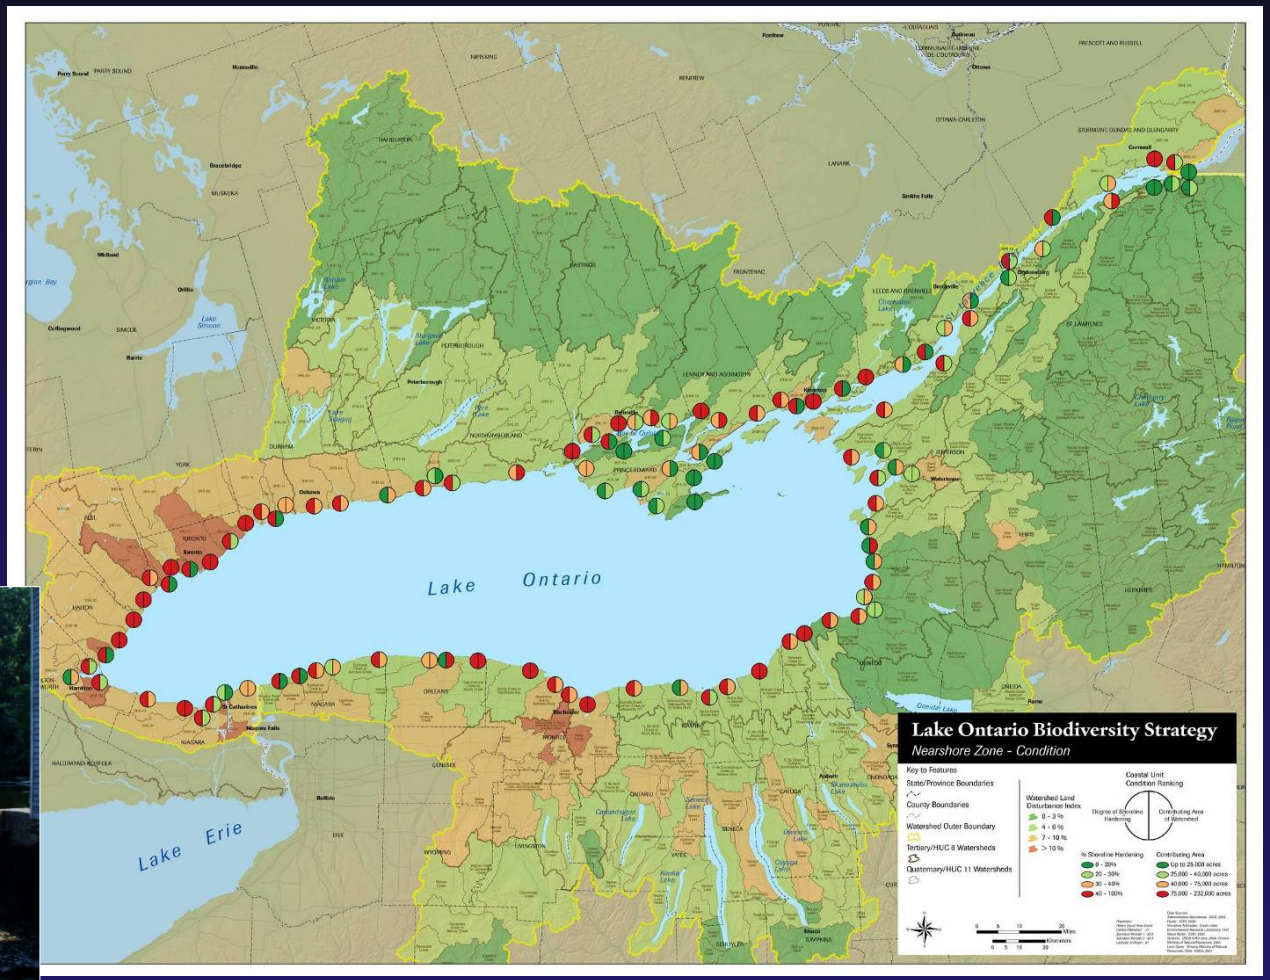
Average Depth	283 feet 86 meters	**Land Drainage Area**	24,720 sq. mi. 64,030 sq. km.
Maximum Depth	802 feet 244 meters	**Shoreline Length**	712 mi. 1,146 km.
Volume	393 cu. mi. 1,640 cu. km.	**Population** US (2000); Can (2001)	9,751,655
Water Area	7,340 sq. mi. 18,960 sq. km.	**Retention Time**	6 years

Source: State of the Great Lakes 2005; NOAA, GLERL

Status of Lake Ontario Progress

- Lake Ontario indicators measure the health of the ecosystem
- Critical pollutant indicators show progress
- Overall, contaminant levels in young fish, herring gull eggs, and Lake trout continue to decline
- LaMP objectives for bird populations, bald eagle, mink and otter achieved

Lake Ontario Biodiversity Conservation Strategy



Status of Lake Ontario Progress

- Extensive coastal wetlands—indicators being developed
- Water level alterations—adaptive management

Lake Ontario Challenges

- LaMP objectives for lower food web and Lake trout populations not met
- Nearshore nutrients, algal blooms, invasive exotic species, human impacts on habitat
- Lake Ontario Binational Cooperative research and Monitoring Year 2008 focused on lower food web problems

SOLEC Indicators
Coastal Wetlands

- Invertebrate communities
- Fish communities
- Amphibian communities
- Bird communities
- Plant communities
- Landscape extent and composition

SOLEC Indicators
Coastal Wetlands

- Human impact measures
- Adjacent land cover
- Wetland area by type
- *Restored area by type*
- *Sediment inflow*
- *Sediment available for coastal nourishment*
- *Phosphorus and nitrogen levels*

SOLEC Indicators
Wetland Related

- Non-native species
- Ground-water dependent plants/animals
- Base flow of ground-water discharge
- Extent of hardened shoreline
- *Artificial coastal structures*

SOLEC Indicators
Coastal Wetlands

- Effects of water level fluctuations

Potential Lake Ontario Metrics

- **Lake Level**
  - Frequency that growing season peak level is less than 74.6 m
  - Duration of low lake level periods (no. successive years below 75.0 m)

- **Habitat Diversity**
  - Percent of wetland mapped as meadow marsh
  - Percent of wetland mapped as cattail (or all invasives)
  - Elevation delineating meadow marsh and cattail
  - Rate of expansion/contraction of cattail community
  - Mean percent cover of cattail in meadow marsh quadrats
  - Percent wetland obligate species
  - FQI
  - Number of native taxa

- **Associated Faunal Metrics**

Lake-Level Variability and Water Availability in the Great Lakes
